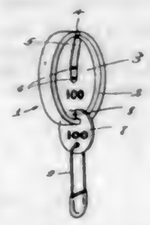
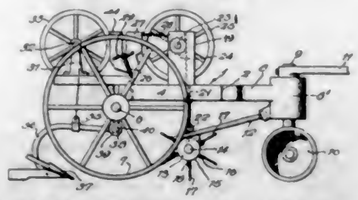
In an oar, a frame comprising upper and lower plates, fasteners extending through the side edge portions of said plates, other fastenings extending through the plates on the medial longitudinal line thereof, sleeves upon said fasteners between the plates to retain the plates in spaced relation to each other, a blade carrier and a handle carrier between said plates, said carriers having semi-circular heads rotatably received about the sleeves on the last-mentioned fasteners and having arcuate inner edges formed with intermeshing gear teeth, bearing brackets secured against the under face of the lower plate adjacent opposite said edges thereof, a hinge leaf having sleeves spaced from each other along its upper edge to be disposed at the outer sides of said brackets, means for securing said leaf rigidly to the gunnel of a boat, a pin passed through the sleeves and bearing brackets to pivotally connect the frame and hinge leaf, and means engaged with the ends of said pin and the upper frame plate to prevent loss of the pin.

1,689,715. ELECTRIC SAFETY DEVICE FOR AUTOMOBILES. LEE O. CALLISTER, Sheridan, Wyo., assignor of one-half to Arthur W. Doyle, Sheridan, Wyo. Filed Apr. 19, 1926. Serial No. 103,184. 18 Claims. (Cl. 246—196.)



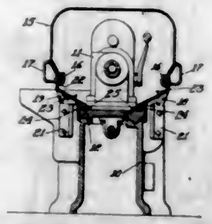
1. In a device of the kind described, highway conductors in electrical connection with railway track rails, contact means on a highway motor vehicle adapted to contact with said conductors, motor control means on the vehicle, and actuating means for said control means in circuit with said contact members, whereby said contact members being in contact with said conductors and a railway vehicle being on said rails, a circuit is completed through said actuating means and said control means is operated to cut out the motor of the roadway vehicle.

1,689,716. WEFT-REPLENISHING MAGAZINE FOR MULTISHUTTLE LOOMS. AUGUSTIN J. CHEVRETTE and VICTOR H. JENNINGS, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 19, 1926. Serial No. 123,277. 4 Claims. (Cl. 139—245.)



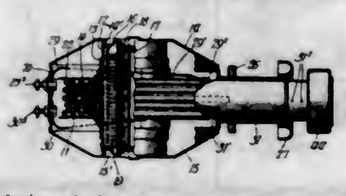
1. In a loom, a magazine frame having guideways for the bobbin tips, said guideways having portions of different widths adapted to receive and center bobbins of different lengths and having tip portions of different diameters.

1,689,717. LAUNDRY-CHECKING DEVICE. ALBERT B. CLISSON, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Jan. 13, 1927. Serial No. 160,987. 7 Claims. (Cl. 40—19.5.)



1. A laundry checking device comprising a tag holder in the form of a split ring, the ring adjacent the split being key-form in cross section and tags having key slots conforming with the key formation of the ring.

1,689,718. STALK CUTTER AND BEDDER. WALTER B. COLLINS, Bishop, Tex. Filed Oct. 16, 1926. Serial No. 142,018. 3 Claims. (Cl. 55—61.)

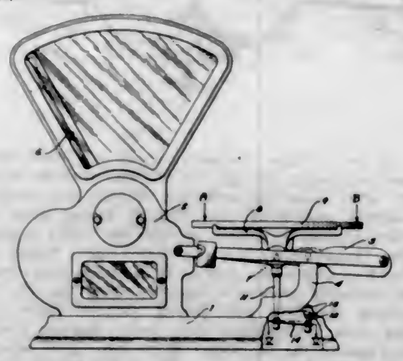


1. In a stalk cutter including a wheeled supporting frame, a yoke pivoted to the frame to swing vertically and laterally, and a rotary cutter carried by and journaled upon the arms of the yoke, a combined rack guide and gear housing rising from the frame at each side thereof and above each yoke arm, a rack bar slidable vertically in each housing, a pivotal suspending connection between each rack bar and the yoke arm at the same side of the frame, a transverse shaft journaled upon each housing, a pinion on each shaft and meshing with the rack bar guided in the housing upon which the shaft is journaled, a hand wheel on each shaft, an automatically operated brake member normally engaging each hand wheel, and means for manually retracting said brake member.

1,689,719. GUARD CASING FOR GRINDING MACHINES AND SUPPORT THEREFOR. ALDEN M. DRAKE, Greenfield, Mass., assignor to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Dec. 17, 1925. Serial No. 75,901. 3 Claims. (Cl. 51—272.)

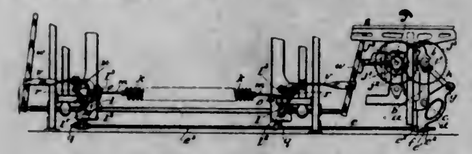
1. In a grinding machine, a bed, a carriage slidable thereon, and a pair of guard rails fixed to said bed and forming protecting flanges at each side of said bed, said guard rails being extended inwardly beyond the edges of said carriage and having depending inner edge portions positioned between upwardly projecting flanges on said carriage, and a guard casing enclosing said carriage and movable longitudinally on said guard rails toward and from operative position thereon.

1,689,720. ELECTRIC CIGAR LIGHTER. WILLIAM C. GRUNOW, Chicago, and OWEN E. GRIGSBY, Park Ridge, Ill., assignors to Grigsby-Grunow-Hinds Co., Chicago, Ill., a Corporation of Illinois. Filed June 21, 1924. Serial No. 721,530. 4 Claims. (Cl. 219—32.)



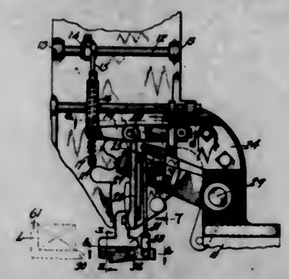
1. A device of the character described comprising a spring retracted reel spool with cord wound thereon and having a conductor ring, a contact in wiping engagement with the ring and circuit with the cord, a lighting element connected with the cord and retracted by the winding of the cord on the spool, and means engaged by the element when retracted for disengaging the wiping contact and ring to open the circuit of the element.

1,689,721. BATHING FLOAT. CARL C. HARRIS, Orange, Mass. Filed June 3, 1927. Serial No. 196,304. 3 Claims. (Cl. 9—11.)



1. As an article of manufacture, a float comprising sides and transverse rods connecting the sides, with floats held on the rods between the two sides, and a covering of canvas extending over and around the float and extending across the float from one side to the other.

1,689,722. STABILIZING DEVICE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 29, 1924. Serial No. 758,582. 6 Claims. (Cl. 265—48.)

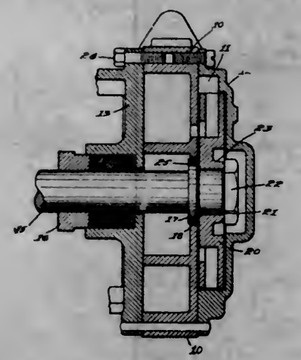


1. In a device of the class described, in combination, a frame, a lever fulcrumed upon said frame, said lever having a load pivot, a commodity receiver supported upon said load pivot, an arm connected to the commodity receiver and having a grooved portion, a grooved portion carried by the frame, and a link connecting said grooved portions having knife edges contacting the faces of said grooves at substantially right angles to the lines of extension of said grooves, the axes of the pivotal connections between said link, the arm and frame and the load and fulcrum pivots of said lever being in parallelogrammatic relation.

1,689,723. PICKING MECHANISM FOR LOOMS FOR WEAVING. EDWARD HOLLINGWORTH, Dobcross, England, assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 24, 1926, Serial No. 118,313, and in Great Britain June 27, 1925. 3 Claims. (Cl. 139—145.)

1. In a spring picking mechanism for looms having picker sticks at each end thereof, charging and firing mechanisms for each stick including pivotally mounted driving levers for each mechanism, a driving rod connecting the levers together, a pivoted actuating lever, a second rod in substantial alignment with the first named rod and pivotally connected to the actuating lever at one end and at the other end operatively connected to the first named rod, and means for giving said acuating lever a reciprocating motion, the pivot for the levers being located on the same side of said rods for all positions of the actuating lever.

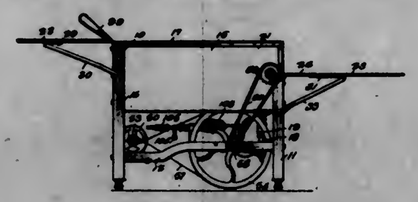
1,689,724. THREAD CUTTER FOR WEFT-REPLENISHING LOOMS. HARRY J. HOOK, Chester, Pa., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 14, 1926. Serial No. 154,808. 9 Claims. (Cl. 139—267.)



1. In a weft replenshing loom, transferrer mechanism, a thread cutter, actuating means tending normally to close the cutter, locking means holding the cutter open against the action of the actuating means when said cutter is in cutting position, and inter-connections between the transferrer mechanism and the locking means to release the actuating means during the first part of the operation of the transferrer mechanism on a transferring beat of the loom, whereby the actuating means will operate the cutter prior to the completion of the transferring movement of the transferrer mechanism.

1,689,725. INDICATING DEVICE. SAMUEL N. HURT, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 28, 1922. Serial No. 591,025. 5 Claims. (Cl. 116—114.)

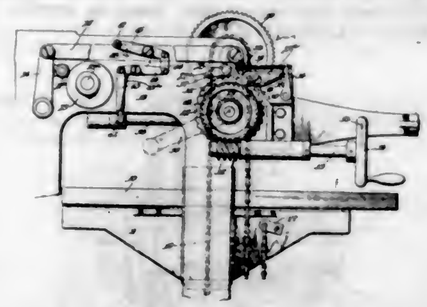
1. In a device of the class described, in combination, a relatively movable chart and index, said index consisting of a flexible line and a line holder comprising a cylinder having one end open and its other end closed, a bracket for supporting said cylinder, a second cylinder having one end open and telescoped within the first said cylinder, the other end of the second cylinder being closed, an expansive spring interposed between the closed ends of said cylinders, said closed ends being perforated, said line being connected to said second cylinder and passing through the perforations in said closed ends.



1,689,726. ADJUSTING AND SECURING MEANS FOR AIR-PUMP ROTORS. IRVING C. JENNINGS, South Norwalk, Conn. Filed May 3, 1926. Serial No. 106,297. 3 Claims. (Cl. 103—111.)

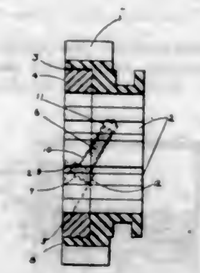
1. In a pump, in combination, a casing having outer and inner walls and an axial opening through said inner wall, a shaft having a shoulder rotatable in said opening but positioned back of the plane of the inner face of said casing, an impeller having a hub slidable axially on said shaft, and a rotatable body portion extending between the walls of said casing, a spacing member of selected thickness interposed between said shaft shoulder and the adjacent end of said hub, and means to press said hub against said spacing member and shoulder, thereby securing said rotatable portion of the impeller in an accurate spaced position with respect to said walls.

1,689,727. DISHWASHING MACHINE. CHARLES A. JOHNSON, Sacramento, Calif. Filed May 20, 1925. Serial No. 31,648. 5 Claims. (Cl. 15—74.)



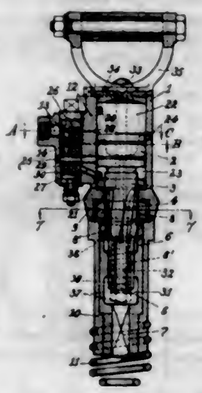
1. A dish washing machine comprising a frame, a liquid container mounted upon the frame, rotatable parallel brushes disposed in the container and in contact with one another, and means cooperating with the brushes for carrying the dishes to be washed on edge through the tub and between the brushes.

1,689,728. METHOD OF TREATING AQUEOUS EMULSIONS OF TAR. BIRGER JOHNSON, Stockholm, Sweden. Filed Mar. 6, 1925, Serial No. 13,637, and in Sweden Mar. 12, 1924. 2 Claims. (Cl. 196—4.)



1. Method of separating aqueous emulsions of tar into their constituents, consisting in mixing the emulsion with a carboxy acid which is substantially insoluble in water but soluble in the tar constituent of the emulsion and leaving the mixture to stand at an elevated temperature until the water is separated from the tar.

1,689,729. PILE-ELEVATING MECHANISM. WILLIAM M. KELLY, Jersey City, N. J., assignor to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 6, 1921. Serial No. 490,289. 19 Claims. (Cl. 271—62.)

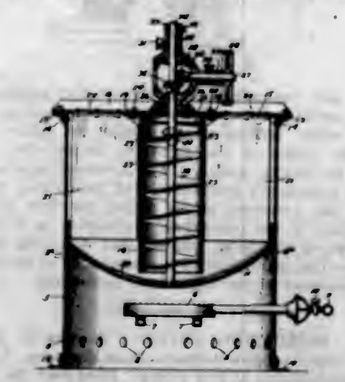


1. Mechanism of the character described including in combination, a vertically movable pile supporting table, a rotatably mounted member, transmission means between said member and table to transmit motion from one to the other including a one-way clutch and gearing including a driving gear, said gearing constructed and arranged when inoperative to hold the table against lowering and to permit such lowering at a substantially uniform rate when the driving gear is set spinning in the lowering direction, and other means functionally independent of said clutch to actuate the table.

1,689,730. ADJUSTABLE TRANSMISSION GEAR. CHARLES Y. KNIGHT, Pasadena, Calif., assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 21, 1925. Serial No. 51,545. 10 Claims. (Cl. 64—98.)

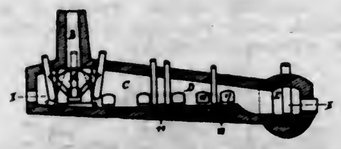
1. In a composite gear adapted to slide upon a driving shaft, the combination of a pair of relatively rotatable members, each of said members having portions adapted to operatively engage said shaft, means for rotating the members relative to each other and means for locking the members together as a slidable unit upon a shaft in a fixed angular relation.

1,689,731. PERCUSSIVE PNEUMATIC TOOL. JOSEF KÖHLEN, Herne, Germany. Filed Jan. 20, 1923, Serial No. 613,888, and in Germany June 6, 1922. 7 Claims. (Cl. 121—6.)



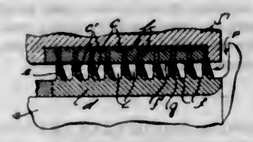
1. A percussive pneumatic tool comprising a cylinder and a piston arranged to reciprocate therein, said cylinder having two exhaust ports arranged to be uncovered by the piston alternately but so located that in certain positions of the piston both exhaust ports will be covered thereby, a cock which controls the one exhaust port of the cylinder, and channels, likewise controlled by said cock, for leading the medium under pressure alternately to opposite ends of said cylinder, said cock being arranged to conduct the medium under pressure to one end of the cylinder at the same time that said cock closes the exhaust port leading from that cylinder end.

1,689,732. VEGETABLE GLUE AND METHOD OF MAKING SAME. IRVING F. LAUCKS and GLENN DAVIDSON, Seattle, Wash., assignors to I. F. Laucks, Inc., Seattle, Wash., a Corporation of Washington. Filed Oct. 29, 1923. Serial No. 671,381. 10 Claims. (Cl. 87—17.)



1. A vegetable glue composition, comprising the reaction products of a vegetable seed flour of considerable protein content and an alkali metal hydroxide as such in an aqueous medium.

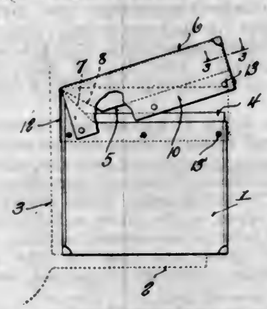
1,689,733. STIRRING MECHANISM. JOSEPH TRIMBY LAWRENCE, Jersey City, N. J., assignor to Mitchell-Rand Mfg. Co., a Corporation of New York. Filed May 12, 1924. Serial No. 712,508. 2 Claims. (Cl. 259—97.)



1. A device of the character described comprising a kettle, a supporting beam extending across said kettle and detachably secured thereto, a cylinder mounted upon said supporting beam and extending downwardly therefrom into said kettle nearly but not quite to the bottom thereof, said cylinder being normally stationary and being provided with spouts extending outwardly and downwardly from it in order to direct the flow of loose material downwardly from the top of said cylinder into said kettle, a guard plate mounted within upper portion of said cylinder, a revoluble shaft extending through said guard plate and axially downward through said cylinder, a conveyor thread carried by said shaft and located within said cylinder in order to crowd loose material against said guard plate and thus to cause the discharge of said loose material from said spouts, and means for turning said revoluble shaft.

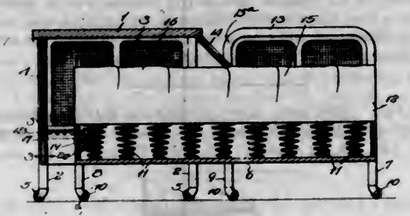
1,689,734. PROCESS OF DIRECT REDUCTION OF IRON ORES. TOUSSAINT LEVOZ, Heer, Belgium, assignor to N. V. Handelmaatschappij Ferlron, Rotterdam, Netherlands. Filed Feb. 16, 1924, Serial No. 693,359, and in Belgium Feb. 1, 1923. 2 Claims. (Cl. 75—14.)

1. In the direct manufacture of iron from ore, the steps of forming a charge comprising iron ore, reducing carbon, oxides of alloy metals such as Si and Mn, and a low melting point aluminiferous flux; subjecting the charge to a comparatively low temperature to produce a low carbon ferro alloy, and a covering slag; raising the temperature to reduce the carbon content of the alloy by interaction of the carbon with the oxidized aluminum in said slag; and then reducing the components other than iron of the alloy by means of an oxidizing agent.



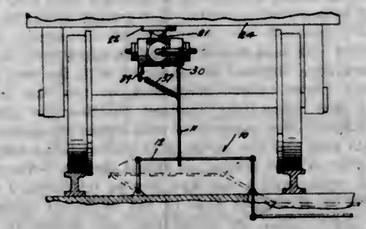
1,689,735. LABYRINTH GLAND CONSTRUCTION. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Aug. 15, 1924, Serial No. 732,306, and in Austria Oct. 5, 1923. 1 Claim. (Cl. 286—10.)

A gland construction for rotating shafts comprising a set of gland rings axially spaced to form a succession of chambers and a second set of gland rings projecting into and dividing said chambers unequally, each ring of the second set normally lying more closely adjacent to one of a pair of gland rings of the first set defining a specific chamber than the other of said rings to form therewith an elongated narrowed axial throttling clearance on one side with a comparatively larger non-throttling clearance on the other side, the set of said gland rings which is disposed on the higher pressure side of such throttling clearances being elastic to be movable with steam pressure variations and thereby vary the elongated axial throttling clearances a substantial amount.



1,689,736. AUTOMOBILE TRUNK. HERBERT F. MASSOPUST, Milwaukee, Wis. Filed Apr. 21, 1924. Serial No. 707,992. 1 Claim. (Cl. 190—19.)

An automobile trunk comprising a body portion, a top hinged thereto and having downwardly extending flanges forming a joint with said body portion, said joint extending upwardly along a slanting line towards the rear of said top, a cover of flexible sheet material secured to the upper face of said top and having flaps extending downwardly from the top cover portion and overlapping and projecting below the joint between the flanges and the body portion of said trunk, said flaps meeting and being permanently joined along vertical lines at the front corners of the trunk by securing means, said flaps having rear vertical



edges aligning with the vertical edges of the rear portion and having a rear portion secured to the rear of said trunk, and detachable fasteners carried by the front and sides of said body portion and said flaps for securing the lower portion of said flaps tightly against said body portion, the vertical rear edges of said side flaps being free.

1,689,737. CONVERTIBLE BED. WILLIAM A. MATHESON, Chicago, Ill., assignor to Roll-A-Way Bed Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 29, 1923. Serial No. 648,499. 3 Claims. (Cl. 5—2.)

1. In combination, an article of furniture, and a bed slidable thereinto and partially concealed thereby when not in fully open position, said bed having oppositely disposed head and foot boards extending only substantially midway of the ends of the bed from one side thereof, said head and foot boards being adapted to occupy positions exteriorly of the article of furniture and having vertical end frame members extending adjacent thereto and in the same vertical plane with the end portions thereof when said bed is in its innermost position.

1,689,738. AUTOMATIC TRAIN CONTROL. DAVID CORNELIUS MEARA, Oakland, Calif., assignor of one-tenth to Albert J. Mouchou, Oakland, Calif. Filed Jan. 11, 1926. Serial No. 80,643. 6 Claims. (Cl. 246—190.)

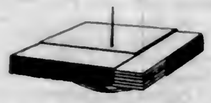
1. In a tripping device for an automatic train control, a revolvable shaft having a valve thereon, an arm pivoted relative to the shaft for swinging motion in axial direction,

a housing surrounding the shaft and slotted to allow the arm to swing transversely for actuating the shaft, and means for yieldingly locking the arm to a side wall of the slot.

1,689,739. DIPHENYLMETHANE AZO DYESTUFFS AND PROCESS OF MAKING SAME. CARL METTLER, Basel, Switzerland, assignor to the Firm J. R. Geigy A. G., Basel, Switzerland. Filed Jan. 14, 1927, Serial No. 161,240, and in Germany Jan. 28, 1926. 4 Claims. (Cl. 260—87.)

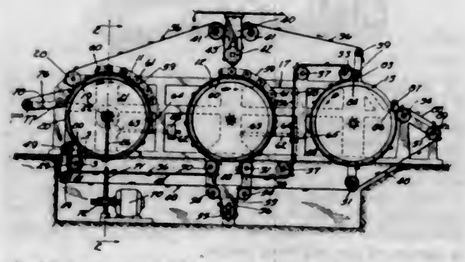
4. As a new article of manufacture, the hereinbefore described mordant dyeing dyestuffs obtained by diazotizing aniline-methylene-ortho-cresotinic acid and coupling with 1(2-chloro-5-sulphophenyl)-3-methyl-5-pyrazolone, constituting in form of its sodium salt a yellow powder difficultly soluble in cold water, easily soluble in hot water with a greenish-yellow color, in concentrated sulphuric acid with a yellow color, dyeing wool from an acetic acid bath greenish-yellow tints, which after chromation change more to yellow.

1,689,740. DITOLYLMETHANE AZO-DYESTUFFS AND PROCESS OF MAKING SAME. CARL METTLER, Basel, Switzerland, assignor to the Firm J. R. Geigy A. G., Basel, Switzerland. Original application filed Jan. 14, 1927, Serial No. 161,240, and in Germany Jan. 28, 1926. Divided and this application filed Nov. 25, 1927. Serial No. 235,759. 4 Claims. (Cl. 260—94.)



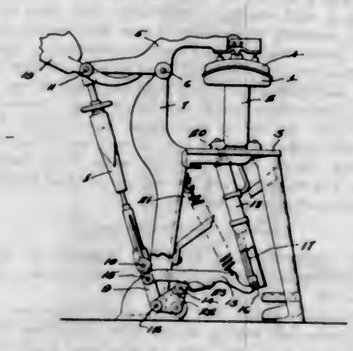
4. As a new article of manufacture the hereinbefore described mordant dyeing dyestuff obtained by diazotizing ortho-toluidine-methylene-ortho-cresotinic acid and coupling with 1-naphthol-3 : 6-disulphonic acid and constituting in form of its sodium salt a red powder easily soluble in water and concentrated sulphuric acid with a red color and yielding red tints on wool from an acetic acid bath and when printed on cotton with a chromium salt.

1,689,741. DISPLAY AND STORAGE RACK. ALBERT MISRACHI, Mexico, Mexico. Filed Sept. 3, 1926. Serial No. 133,369. 1 Claim. (Cl. 211—134.)



An open front storage and display rack for magazines or the like including a lower shelf having a rigid stop strip along its forward edge portion and a rigid upwardly and rearwardly inclined rest strip spaced rearwardly from and parallel with said stop strip, and an upper shelf having its forward edge disposed to cooperate with the rest strip to support copies of the magazines, or the like, in an upwardly and rearwardly inclined position for display when the lower edge portions of said copies are seated between said stop and rest strips, said shelves being adapted to have piles of said magazines stored thereon behind the displayed copies, and a top wall having its forward edge engageable by the upper ends of the displayed copies to aid the upper shelf in supporting said copies in flat condition, said forward edges of the upper shelf and top wall being beveled and in the same inclined plane as the front surface of the rest strip.

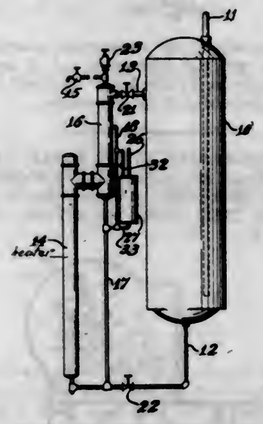
1,689,742. PAPER NAPKIN OR THE LIKE. ELMER C. MORRIS, Chicago, Ill. Filed Aug. 21, 1925. Serial No. 51,571. 7 Claims. (Cl. 206—57.)



1. A paper napkin or the like folded into a rectangular form with the upper final fold having one exposed corner lying within the perimeter of the other folds and two edges of said upper final fold spaced away from the perimeter of the other folds by a substantial distance, the folds so disposed providing a thick body part to the folded napkin and also providing a plurality of separated corner tabs to facilitate handling of the napkin.

1,689,743. LAUNDRY DRIER. THOMAS J. MULLEN, Owensmouth, Calif. Filed May 2, 1927. Serial No. 188,296. 6 Claims. (Cl. 68—9.)

1. An apparatus of the class described, the combination of : a primary drum ; a secondary drum ; a primary web adapted to engage the surface of said primary drum ; a tertiary drum ; a secondary web engaging the surface of said tertiary drum, said secondary web engaging said primary web after it leaves said primary drum and disengages said primary web before said secondary web engages said tertiary drum, said primary and secondary webs both passing around said secondary drum ; and drive mechanism for operating one of said drums.

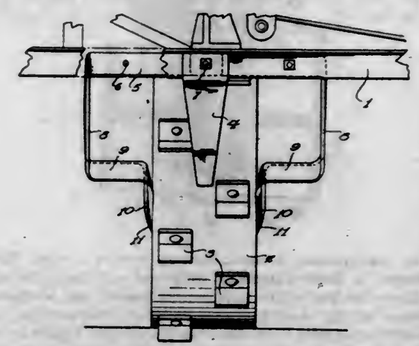


1,689,744. PRESSING-MACHINE-OPERATING MECHANISM. JOHN NEUROTH, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed June 30, 1926. Serial No. 119,730. 9 Claims. (Cl. 68—9.)

1. A combination with a pressing machine comprising a frame, cooperating pressing elements supported by the frame and one being movable toward and from the other,

means for actuating the movable pressing element including a lever carrying the movable pressing element, a toggle including links pivoted together, one being pivoted at its outer end to said lever and the other being pivoted at its outer end to the frame, a reciprocally movable actuator connected to the frame and arranged in substantial parallelism to the upper link of the toggle, an intermediate lever fulcrumed between its ends on the frame, one arm thereof being connected to the toggle and the other to the actuator, and means whereby the lever may have an endwise shifting movement relatively to the fulcrum point.

1,689,745. STEAM GENERATOR. MARK L. NICHOLS, Auburn, Ala., assignor to Alabama Power Company, a Corporation of Alabama. Filed Sept. 30, 1927. Serial No. 223,171. 7 Claims. (Cl. 122—4.)

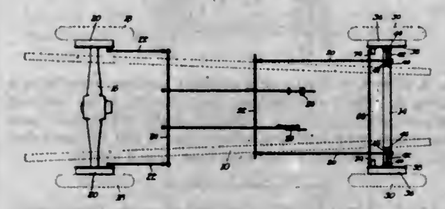


1. The combination with a hot water tank having a thermo-siphon circuit associated therewith and with heating means included in the circuit, of means included in the circuit and adapted to form a steam space, and means, when desired to generate steam, for automatically maintaining a water level in the heating part of the circuit below said steam space.

1,689,746. IRRIGATOR. EVA B. NORTON, New York, N. Y. Filed Mar. 6, 1928. Serial No. 259,524. 3 Claims. (Cl. 128—227.)

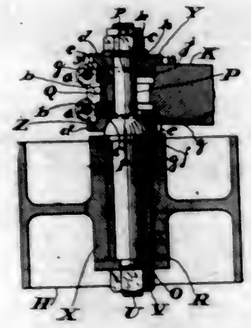
1. In an irrigating device, the combination of a liquid container having a rear wall and an open top, a closure for said container, said rear wall having an overflow passage formed, therein, the closure being formed with an opening located adjacent said overflow passage for permitting the egress of gas from the liquid, and a discharge outlet near the bottom of the container.

1,689,747. SCRAPER. ROBERT W. OLSON, Amboy, Minn., assignor of one-half to Melvin W. Keith, Amboy, Minn. Filed June 4, 1926. Serial No. 113,804. 1 Claim. (Cl. 280—158.)



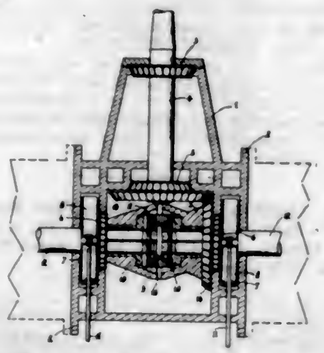
The combination with a frame, and a traction wheel provided with rows of traction lugs, of a scraper finger secured to the frame and depending from the frame and bearing at its free end upon the wheel between the traction lugs, and scrapers arranged at opposite sides of the wheel and each consisting of an arm secured to the frame, a hanger member depending from the arm in laterally spaced relation to the side of the wheel, a web extending from the lower end of the hanger member to the side of the wheel, and a blade projecting forwardly from the inner end of the web in contact with the adjacent side of the wheel.

1,689,748. PROCESS OF MAKING ALKALI-METAL HYPOCHLORITES. ALFRED OPPÉ, Aachen, Germany. Filed June 26, 1926, Serial No. 118,862, and in Germany Apr. 17, 1926. 2 Claims. (Cl. 23—86.)



1. Process for the manufacture of solid mixtures of alkali metal hypochlorite and alkali metal chloride which comprises reacting with chlorine on a suspension of dry alkali metal hydroxide in a neutral liquid in which neither alkali metal hypochlorite nor alkali metal chloride are materially soluble.

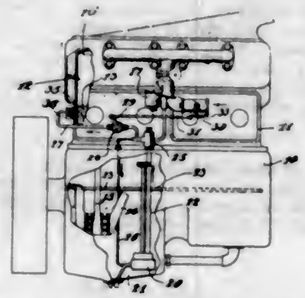
1,689,749. VEHICLE. HENRI PERROT, Paris, France, assignor to Bendix Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 12, 1925. Serial No. 8,633. 1 Claim. (Cl. 280—95.)



In a front wheel knuckle having braking members, and a backing plate for said members, the combination therewith of a cup-shaped member secured to the plate, a pair of cooperating half-sockets in the cup-shaped member, a cross tie rod, and a ball carried by the tie rod and received between the half-sockets.

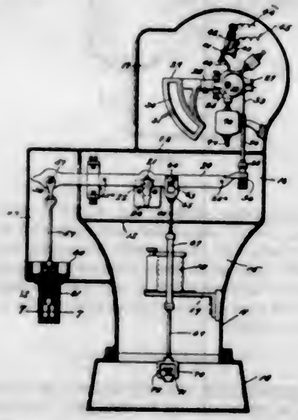
1,689,750. ADJUSTABLE SUPPORT FOR STATIONARY SHAFTS. SNOWDEN B. REDFIELD, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 25, 1927. Serial No. 201,521. 1 Claim. (Cl. 308—14.)

In combination, a split bearing having a bore therethrough, a shaft extending with one end into the bore, a flange on the shaft having a spherical end surface, a washer on the shaft having a spherical end surface, said washer being split to enable it to be clamped tightly on the shaft, bushings in the bore having eccentrically disposed apertures to receive the shaft, the outer ends of the apertures being flared to cooperate with the spherical surfaces of the flanges and the washer, said bushings being adapted to be rotated in opposite directions for tilting the shaft with respect to the longitudinal axis of the bore, bolts clamping the bearing on the bushings, and a nut on the shaft bearing against the washer to clamp said washer to the shaft and to hold the flange and washer in engagement with the bushings.



1,689,751. DRIVE UNIT FOR TANDEM AIRCRAFT ENGINES. LYNN H. RENGLER, Long Beach, Calif. Filed Oct. 12, 1926. Serial No. 141,063. 3 Claims. (Cl. 74—34.)

1. A drive unit for tandem aircraft engines comprising a housing to which the engines are adapted to be secured, shafts on said engines, a propeller shaft, differential gear means connecting said first named shafts and the propeller shaft, and brake means on said first named shafts.



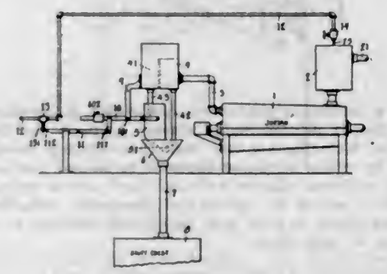
1,689,752. LUBRICATING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Oct. 9, 1924. Serial No. 742,637. 2 Claims. (Cl. 123—196.)

1. In an internal combustion engine, a carbureter, gasoline flooding means associated therewith, and a pressure feed lubricating system comprising an oil supply conduit, pipes communicating therewith for supplying oil to the bearings, a pipe also communicating therewith for supplying oil to the cylinder walls, a pressure controlled valve in said cylinder wall supply pipe, and flow control means in

said cylinder wall supply pipe operatively connected to said flooding means, whereby lubricating oil is supplied to the cylinder walls under abnormal pressure conditions, during the operation of said flooding means.

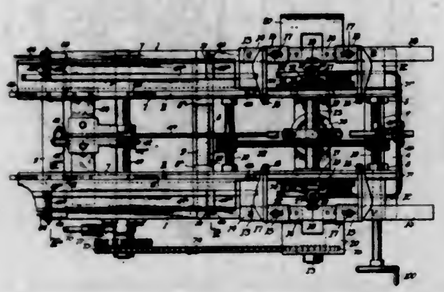
1,689,753. WEIGHT-INDICATING SCALE. HARRY C. SCHAPER, St. Louis, Mo., assignor to The Weight-O-Graph Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 13, 1921. Serial No. 507,492. 9 Claims. (Cl. 265—62.)

1. In a weight indicating scale, a weight receiving member, a pair of co-operating levers, a frame supported in a suspended position by said levers and supporting said weight receiving member, a beam lever, operative connections between said co-operating levers and said beam lever, an oscillating transparent member provided with weight indicia, operative connections between said beam lever and said weight indicia member, a screen, means for projecting said weight indicia in enlarged form upon said screen, said projecting means including a source of light, an electric circuit for said source of light, a manually operable switch for controlling said circuit, and auxiliary contacts interposed in said circuit in parallel with said switch and operable by means of said oscillating member.



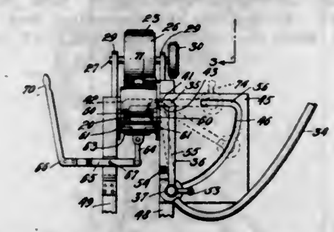
1,689,754. BEARING DEVICE FOR RAILS ON SLEEPERS OF REENFORCED CEMENT. LUIGI SERRA, Rome, Italy. Filed Apr. 19, 1927, Serial No. 184,942, and in Italy Dec. 22, 1926. 2 Claims. (Cl. 238—94.)

1. A railway tie of reenforced cement, comprising oppositely arranged blocks and an arched bridge connecting said blocks, each of said blocks having a lower concave face with depressions in its upper and lower faces, a bushing in each depression, and each block having a plurality of bolt slots therethrough, certain of said slots being ad-



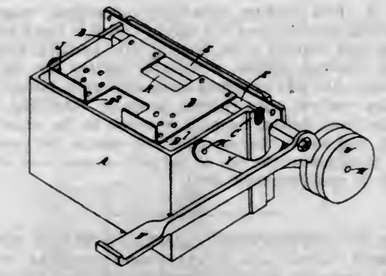
jacent the inner side of the block and others adjacent the outer side of the block, each of said slots being disposed at an angle to both the longitudinal and transverse axes of the tie.

1,689,755. STOCK-REGULATING MECHANISM FOR PAPER-MAKING MACHINES. JOHN ROBERT SPOOR, Kalamazoo, Mich. Filed Oct. 31, 1927. Serial No. 229,940. 4 Claims. (Cl. 92—46.)



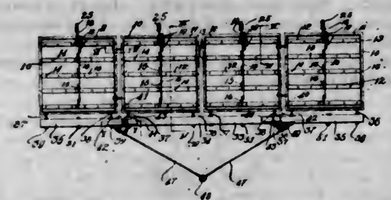
1. In a stock control means for paper making machines, the combination with the Jordan beater and stuff supply box therefor, of a regulating supply chest with a constant level chamber, delivery pipes therefrom, a balanced hopper with restricted outlet, a counterbalanced lever carrying said hopper, a water supply pipe, a needle valve for controlling the same, and connections from said valve to the said counterbalanced lever, as specified.

1,689,756. MECHANISM FOR FEEDING SHEET-METAL BLANKS AND THE LIKE. EDWIN V. SWANGREN, Maywood, Ill., assignor of one-half to William M. Stevenson, Evanston, Ill. Filed Nov. 10, 1923. Serial No. 674,099. 16 Claims. (Cl. 271—32.)



1. In a machine for feeding sheet metal blanks and the like and having intermittently acting means for supporting the central portion of a stack of blanks and reciprocating means for intermittently drawing down marginal portions of the bottom blank, separating means including a movable plate having an inward and upward reciprocating movement transversely of the machine, said movable plate being pivotally mounted on rocking links and arranged to slide upon a stationary portion of the machine.

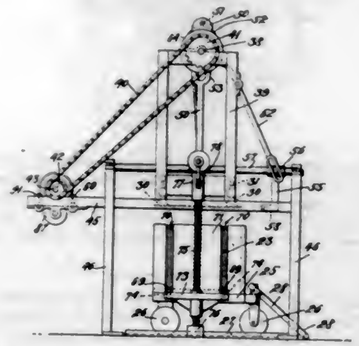
1,689,757. APPARATUS FOR REMOVING LOOSE PARTICLES FROM THE INTERIOR OF CANS. BURT E. TAYLOR, Mount Vernon, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Original application filed June 18, 1925, Serial No. 37,928. Divided and this application filed Sept. 8, 1927. Serial No. 218,140. 6 Claims. (Cl. 15—15.)



1. An apparatus for removing loose particles from the interior of tin cans and the like comprising, means for rotatively supporting the cans, means for rotating the cans, a nozzle arranged to be connected with a vacuumizing means, and means for inserting the nozzle into the cans.

1,689,758. DEVICE FOR BOSHING TINPLATE AND SHEET BAR SECTIONS. DAVID JOHN THOMAS, Cardiff, and JOHN LEVI VICKERY, Tonteg, Llantwit Vardre, Wales. Filed Feb. 4, 1927, Serial No. 165,879, and in Great Britain Feb. 16, 1926. 6 Claims. (Cl. 266—6.)

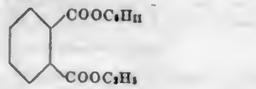
1. A device for boshing articles such as tin plate and sheet bar sections consisting in the combination of a tank for containing liquid having a platform for carrying the articles to be boshed pivotally mounted on the said tank and means for pivoting said platform whereby the articles are momentarily immersed in the liquid in said tank.



1,689,759. SECTIONAL HARROW. LEONARD P. WOLF, Burlington, Wis. Filed June 28, 1926. Serial No. 118,966. 8 Claims. (Cl. 55—84.)

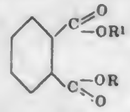
1. In a sectional harrow, spaced frames pivotally secured together, teeth carrying crossbars journaled in said frames, means including a lever individual to each frame

for rotating said crossbars, a foldable beam secured to said frames, and angular plates adjacent the joints in said beam to limit the pivotal movement of the foldable portions thereof with the corresponding frames and act as a rest therefor, said levers being interlockable to maintain certain of said frames in elevated position.



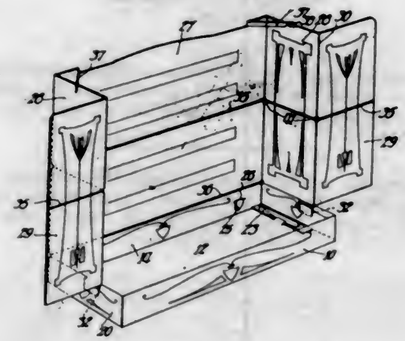
1,689,760. APPARATUS FOR FEEDING SHEET METAL AND THE LIKE. JOHN H. YOUNG and WILBUR G. FRINK, Middletown, N. Y., assignors to The Borden Company, New York, N. Y., a Corporation of New Jersey. Original application filed Aug. 4, 1926, Serial No. 126,990. Divided and this application filed Aug. 19, 1927. Serial No. 214,130. 5 Claims. (Cl. 214—8.5.)

1. A sheet feeding apparatus comprising, means for removing the top sheet of a pile of sheets, a truck mounted on wheels adapted to be brought into position under the sheet removing means, a movable bottom for the truck on which the pile of sheets rests, side walls for the truck having vertical slots therein, laterally extending fingers on the truck bottom adapted to travel in the slots in the walls, and means for engaging and raising the truck bottom to maintain the top of the pile of sheets at substantially a predetermined level.



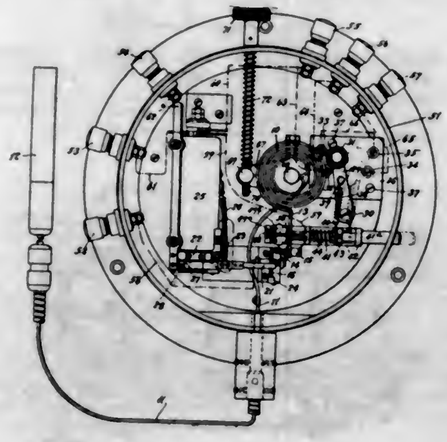
1,689,761. CYCLOHEXYL-ALKYL-PHTHALIC ESTERS. ROGER ADAMS and JAMES FRANKLIN HYDE, Urbana, Ill., assignors to The Newport Company, Carrollville, Wis., a Corporation of Delaware. Filed June 11, 1926. Serial No. 115,397. 3 Claims. (Cl. 260—103.)

1. As a new article of manufacture, cyclohexyl ethyl phthalate of the formula—



1,689,762. ORGANIC SOLVENT. ROGER ADAMS and JAMES FRANKLIN HYDE, Urbana, Ill. Filed Dec. 8, 1926. Serial No. 153,453. 7 Claims. (Cl. 260—103.)

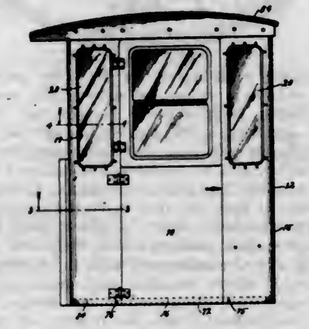
1. As a new article of manufacture the compound of the general formula—



in which R^1 represents an alkyl substituted cyclohexyl group and R an alkyl group.

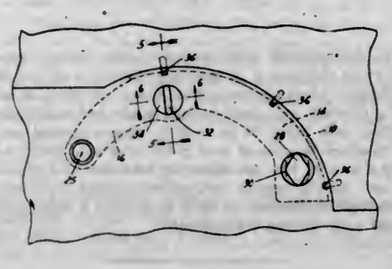
1,689,763. DISPLAY BOX. SIDNEY C. ANSCHELL, Chicago, Ill., assignor to The Folly Town Company, a Corporation of Illinois. Filed July 14, 1924. Serial No. 725,994. 8 Claims. (Cl. 206—44.)

3. A cardboard display box comprising, in combination, a container portion and a display portion; the display portion including not less than three display panels defined by crease lines and bendable to assume various angular positions relative to each other; and a tongue secured to one of the panels and engageable with the adjoining panel to hold said panels substantially at right angles to each other.



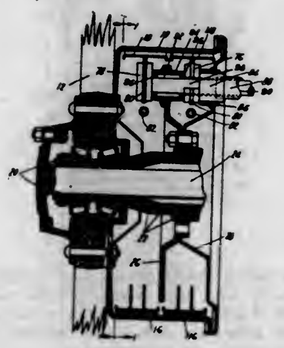
1,689,764. AUTOMATIC CONTROLLER. FRANK J. BAST and ROBERT M. WILHELM, Brooklyn, N. Y., assignors to Charles J. Tagliabue Mfg. Co., New York, N. Y., a Corporation of New York. Filed Sept. 10, 1925. Serial No. 55,640. 3 Claims. (Cl. 200—140.)

1. The combination of a movable contact member, an actuating arm in operative relation with said contact member, an electric relay adapted to actuate said arm, a cooperating contact member, a thermo-sensitive element carrying said cooperating member and arranged to bring the two contact members into engagement with



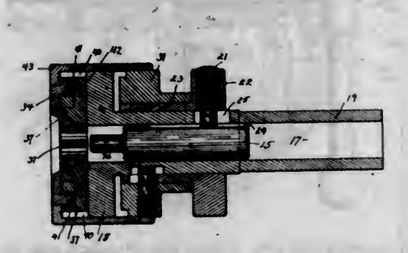
each other to close a predetermined circuit and bring about an electric energization of the relay whereby said arm is actuated to shift the movable contact member to bring a new portion thereof into position for contact engagement by said corresponding contact member.

1,689,765. CAB FOR TRUCKS. KENNETH S. BAXTER, Michigan City, Ind., assignor to Sheet Steel Products Company, Michigan City, Ind., a Corporation of Indiana. Filed Aug. 6, 1923. Serial No. 655,888. 2 Claims. (Cl. 296—28.)



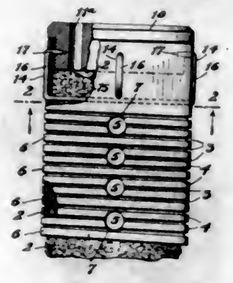
1. In combination, a cab having a top, front, rear and side panels, the front panel having its lower portion removed to form an opening, a cowl in said opening, said cowl comprising an inverted U-shaped member, L-shape in cross-section, having a continuous rearwardly extending flange adapted to fit in said opening, means for adjustably connecting said flange to said front panel, and a filler secured to said cowl and having an opening adapted to receive a dash.

1,689,766. METHOD OF MAKING BRAKES. VINCENT BENDIX, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1926. Serial No. 135,539. 2 Claims. (Cl. 29—148.)



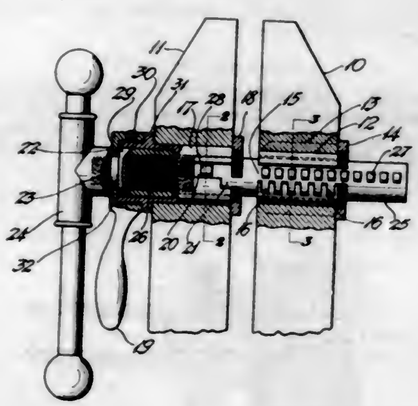
1. That method of making brake shoes which comprises forming a segmental cylindrically-arcuate band with openings for lining rivets forming a flat arcuate stiffening member with gage portions, positioning the band with respect to the stiffening member by gage devices engaging the rivet openings and said portions, and holding the band and stiffening member so positioned and securing them permanently together while so held.

1,689,767. DUPLEX BRAKE. VINCENT BENDIX, Chicago, Ill., and ADIEL Y. DODGE, South Bend, Ind., assignors to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 4, 1926. Serial No. 152,545. 11 Claims. (Cl. 188—79.)



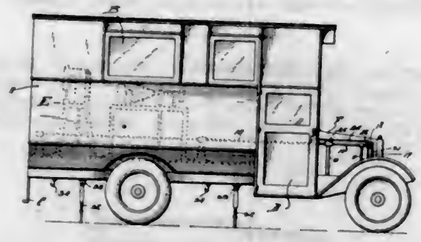
1. A duplex brake comprising, in combination, a drum, a pair of friction devices arranged side by side, a support between the friction devices, an anchor secured to the support and extending therefrom in opposite directions and engaged by the two friction devices, and reinforcing plates engaging opposite sides of the support and additionally supporting said anchor.

1,689,768. SELF-OPENING DIE HEAD. ALBERT F. BREITENSTEIN, New Haven, Conn., assignor to The Geometric Tool Co., New Haven, Conn., a Corporation. Filed Feb. 9, 1927. Serial No. 166,978. 1 Claim. (Cl. 10—96.)



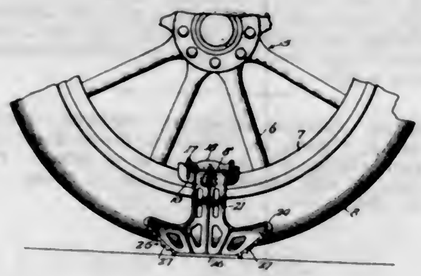
In a self-opening rotary die-head, the combination with a die-body formed with a tubular shank, radially-movable chasers installed in the said body, a chaser-operating cam for positively moving the said chasers in opposite directions, an operating-ring connected with the said cam for oscillating the same, a tripping-sleeve having sliding bearing directly upon the said shank, extending forward within the chaser-cam operating-ring so as to provide a bearing therefor, and provided at its rear end with an annular abutment-flange, an internal tripping-gauge located axially within the said shank, radially-disposed screws mounted in the said abutment-flange for centering the tripping-gauge within the said shank and coupling the same to the said sleeve, and clearance openings formed in the shank for the outward passage of the said screws, the said operating-ring and abutment-flange together forming an annular groove for the reception of an external re-setting member.

1,689,769. SCOURING DEVICE. JULES J. BRELL, New York, N. Y. Filed Aug. 23, 1927. Serial No. 214,835. 6 Claims. (Cl. 15—209.)



1. An article of the class described having a tubular casing, metallic wool held therein, a rigid member fitted into one end of said casing and fastening means for holding said wool within the casing, said fastening means also uniting said casing and rigid member.

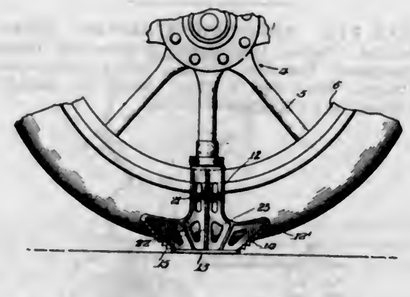
1,689,770. WORKBENCH-VISE SCREW. BENJAMIN F. BRILEY, Shattuck, Okla. Filed Feb. 11, 1927. Serial No. 167,393. 1 Claim. (Cl. 81—37.)



In combination with a fixed rear standard and an outwardly disposed movable clamp, a vise screw assembly comprising a locking sleeve rigidly mounted through the standard and having a longitudinal locking slot with lateral locking indentures along one margin, an operating sleeve journaled through the clamp in alignment with the said locking sleeve and having an operating slot at its inner end, a handle at the outer end of the operating sleeve, a relatively short adjustment sleeve journaled within the operating sleeve, the inner end thereof being interiorly threaded and its outer end being reduced and extending out through the said handle of the operating sleeve, a lever at the outer end of the adjustment sleeve, a shaft journaled within the said locking and operating sleeves the inner end thereof having a plurality of dogs adapted upon rotation of the shaft to releasably engage the said locking indentures of the locking sleeve and the outer end being threaded to engage the inner end of the adjustment sleeve and having a lug back of the threaded portion adapted to releasably engage the operating slot of the operating sleeve.

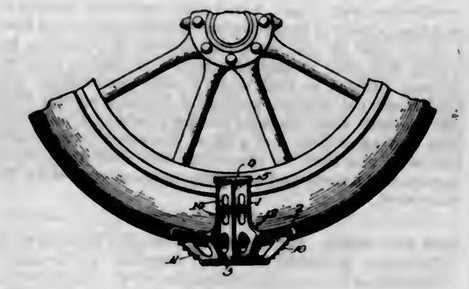
1,689,771. PORTABLE SHOE SHOP. JIM BRITTON, Bessemer, Ala. Filed Nov. 22, 1927. Serial No. 235,030. 2 Claims. (Cl. 180—53.)

1. A portable workshop of the character described comprising a vehicle, a motor for driving the same, a line shaft extending longitudinally through the vehicle and extending parallel to the motor, an electric generator mounted upon the vehicle, means for driving the generator from the motor, and an operative connection between the generator and the line shaft including a driving element loosely mounted upon the line shaft and operatively connected to the generator shaft, a clutch slidably mounted upon the line shaft and rotatable therewith and shiftable into or out of engagement with the driving element, clutch shipping means engaging said clutch and an operating rod operatively connected to the shipper lever and extending longitudinally into the interior of the vehicle.



1,689,772. LIFTING DEVICE FOR VEHICLE WHEELS. JOHN H. BROOKMAN, Cedar Rapids, Iowa. Filed Apr. 9, 1927. Serial No. 182,307. 7 Claims. (Cl. 254—94.)

1. In combination with an automobile wheel having a hole formed in the side of the felly thereof, a lifting device comprising a plate having a hole and a slot therein, means passing through said hole in said plate and said felly for attaching said plate to said felly, means formed on said plate to space the top of said plate from said felly, a body having a pair of legs for engaging said slot and straddling said last named means, extensions having inclined bottoms integrally formed on said body, and a base connecting said body and said extensions.

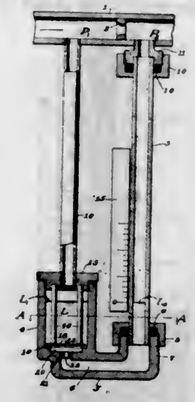


1,689,773. LIFTING DEVICE FOR VEHICLE WHEELS. JOHN H. BROOKMAN, Cedar Rapids, Iowa. Filed Apr. 9, 1927. Serial No. 182,308. 8 Claims. (Cl. 254—94.)

1. A lifting device for vehicle wheels comprising a clamping device adapted to be attached to a wheel spoke and spaced from the wheel felly, a body having a slotted ing thereon for engaging said spoke, said lug being positioned between the bottom of the clamp and the felly to hold the body in relative position, extensions formed on said body and having the lower edges thereof inclined, corrugations formed on said edges to grip the pavement,

and a flat base integrally formed on said body for supporting the vehicle when the wheel is brought to proper position.

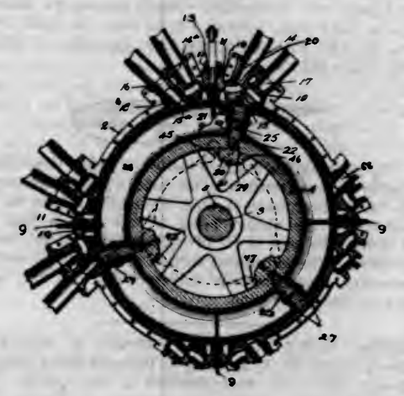
1,689,774. LIFTING DEVICE FOR VEHICLE WHEELS. JOHN H. BROOKMAN, Cedar Rapids, Iowa. Filed Apr. 9, 1927. Serial No. 182,309. 2 Claims. (Cl. 254—94.)



1. The combination of a wheel felly having a slot therethrough of a lifting device cooperating with said slot and comprising a base, a body integral with said base, a lug integral with said body and substantially parallel with said base and adapted to be received in said slot, outwardly extending projections on the sides of said body and integral with said body and said base, said projections extending upwardly substantially midway between the base and the lug and provided with rounded bottoms, and ground engaging teeth on said rounded bottoms arranged progressively outward from bottom to the upper end of the said bottoms.

1,689,775. CALCICATED IODINE AND PROCESS OF PREPARING SAME. WALLACE L. CHANDLER, East Lansing, Mich. Filed May 1, 1924. Serial No. 710,420. 4 Claims. (Cl. 23—5.)

1. A stable aqueous solution of calcicated iodine containing an excess of iodine capable of yielding, under the influence of a strong acid, a crystalline form of iodine.

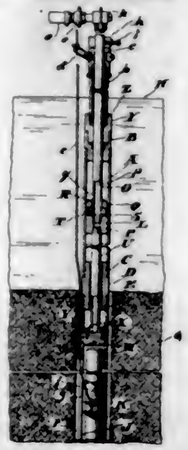


1,689,776. FLOW METER. CLARENCE A. DAWLEY, Plainfield, N. J. Filed Apr. 4, 1924. Serial No. 704,243. 4 Claims. (Cl. 73—167.)

1. In a fluid metering system, head producing means, a liquid manometer for showing head connected to said means, and a check valve restricting downward motion of the manometer liquid to a certain degree and restricting

upward motion of the manometer liquid to a greater degree, said check valve comprising a seat with a restrictive opening and a light disc with more restrictive opening.

1,689,777. ROTARY STEAM ENGINE. LOUIS GEORGE, New York, N. Y. Filed June 5, 1924. Serial No. 718,104. 4 Claims. (Cl. 121—76.)

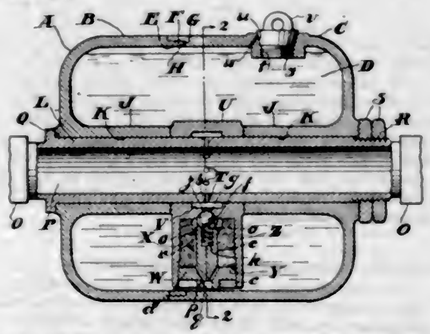


1. In a rotary steam motor, a rotor and a casing therefor, a steam cylinder extending entirely around the periphery of the rotor, a set of forward inlet and exhaust ports, and a set of reverse inlet and exhaust ports grouped on the casing in a series of independent groups, a valve to each port, a cam on the rotor shaft, a valve link for each induction valve to open the inlet ports and operated by said cam, a trip rod to close each inlet port, a cylinder abutment mounted between the forward and reverse inlet ports of each group and means to move said abutment successively into and out of operative position in said cylinder in timed relation to the opening and closing of said induction port.

1,689,778. PNEUMATIC CHARGING DEVICE. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 14, 1927. Serial No. 226,110. 1 Claim. (Cl. 86—21.)

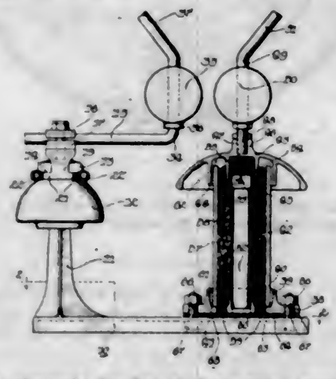
A pneumatic charging device, comprising a cylinder, a piston reciprocable thereon, a plunger, a tube at one end

of the cylinder adapted to be inserted into a drill hole and forming a chamber for conveying an explosive into the drill hole, a hollow rod connecting the plunger and the piston to transmit the movement of the piston to the plunger for



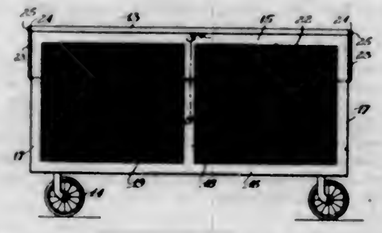
expelling such explosive from the tube and compressing it in the drill hole, said rod having a port for admitting pressure fluid from the rod into the cylinder, and means connecting the rod with a pressure fluid supply.

1,689,779. GUIDE APPARATUS FOR THE PROPELLER STREAM OF VESSELS. JENS BRODERSEN HIORTH, Hovik, near Oslo, Norway. Filed Sept. 22, 1927, Serial No. 221,246, and in Norway Sept. 28, 1926. 3 Claims. (Cl. 114—162.)



1. In combination a ship's rudder, a guide vane for the propeller stream attached to the rudder post asymmetrically to the vertical plane through the center line of the propeller shaft, the rudder being of the stream line type and having the axis of its pivots arranged off the median line through the horizontal section of the rudder with an asymmetry approximately corresponding to the asymmetry of the guide vane.

1,689,780. AIR-LINE OILER. GEORGE W. HULSHIZER, Stewartsville, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 25, 1927. Serial No. 194,081. 5 Claims. (Cl. 184—55.)

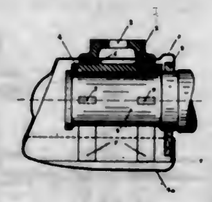


2. An air line oiler comprising a plurality of casing sections forming a reservoir for oil, means for holding the sections in fluid tight engagement with each other, said means having a passageway for conveying pressure fluid through the casing, and means associated with means for conveying pressure fluid from the passageway into the reservoir and oil from the reservoir into the passageway.

1,689,781. LIGHTNING ARRESTER. ERNEST H. JACOBS, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1921. Serial No. 442,341. 4 Claims. (Cl. 175—30.)

1. An electrode for lightning arresters comprising, in combination with a base, a foot piece removably secured to said base, a shell of insulating material carried on said base, a water shed on the other end of said shell, means for sealing said shell in said foot piece and shed, a solid resistance element in said shell, a filler surrounding said solid resistance element, means for introducing this filler into the shell after the same has been secured to said foot piece and water-shed, and a plate interposed between said foot piece and base for preventing said filler from working out of the shell, and an arcing terminal carried by the water-shed.

1,689,782. CRIB. DEWEY M. KENNEDY and BENJAMIN H. KENNEDY, Rochester, N. Y., assignors to Kennedy-McCandless Corporation, Rochester, N. Y., a Corporation of New York. Filed July 28, 1925. Serial No. 46,639. 5 Claims. (Cl. 5—97.)

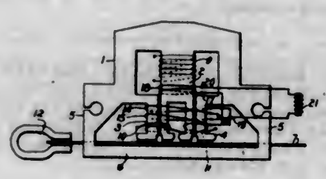


1. In combination, a crib body, a top therefor, and a member extending substantially the length of the body along one of its side walls and pivotally secured in notches formed therein and having angularly disposed ends connected with the top, said member permitting the top to move bodily from a position overlying the crib-outwardly and downwardly to a vertical position at the side thereof.

1,689,783. BEARING ESPECIALLY FOR RAILWAY VEHICLES. FERENC KERTÉSZ, Budapest, Hungary. Filed Oct. 1, 1925, Serial No. 59,854, and in Germany Oct. 4, 1924. 2 Claims. (Cl. 308—39.)

1. A journal box for a railway car comprising a housing, a pair of stirrups each having a semicircular section

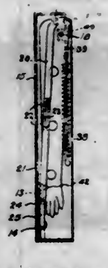
positioned within the housing, a semicircular bearing placed in the top of said housing and resting against the semicircular section of said stirrups, means on the bearing



coacting with said stirrups for preventing longitudinal movement of said bearing relative to said housing and removable means co-operating with the housing for preventing rotation of said bearing.

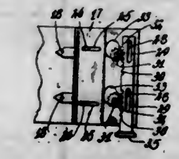
1,689,784. PROCESS OF FORMING ANNULAR PLATES. FRED R. KLAUS, Warren, Ohio, assignor to The American Welding and Manufacturing Company, Warren, Ohio, a Corporation of Ohio. Filed Dec. 15, 1924. Serial No. 755,924. 8 Claims. (Cl. 29—156.)

1. The method of changing the plane of an annular body disposed longitudinally with respect to the axis thereof to a substantially transverse position with respect to said axis, which comprises pressing the annular body between one or more sets of cooperative dies and rotating the flange while keeping the median line of the body as it is being rotated at substantially the same radial distance from said axis.



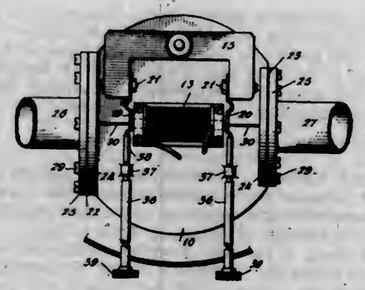
1,689,785. TEMPERATURE-COMPENSATING DEVICE. MONTGOMERY KNIGHT, Holyoke, Mass., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 29, 1925. Serial No. 65,633. 10 Claims. (Cl. 171—264.)

1. The combination with a flux-producing element, of flux-producing means including differentially related windings inductively excited thereby and responsive to temperature variations for compensating said element for changes caused by temperature variations in the flux thereof.



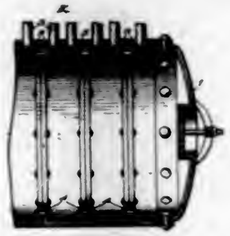
1,689,786. DIRECTION INDICATOR. KURT KOENIGSNAG, Seattle, Wash. Filed Aug. 25, 1927. Serial No. 215,304. 7 Claims. (Cl. 116—52.)

1. A direction indicator, embodying a housing open at one edge, a signal arm pivoted at its upper end within said housing for swinging movement into and out of the housing, a counterbalancing rod connected with the upper end of the signal arm and curved to clear said signal arm pivot, a tension spring connected with the lower end of said rod and secured within said housing below said signal arm pivot whereby the spring will tend to hold the signal arm in an elevated position and the line of pull of the spring will



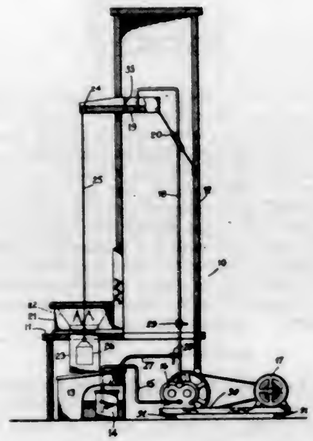
cross the center of said signal arm pivot and tend to urge the signal arm into the housing when said signal arm is lowered and means for raising and lowering said signal arm.

1,689,787. HOLDER FOR SOAP. GEBHARD KUPFERSCHMID, New York, N. Y. Filed Mar. 24, 1927. Serial No. 178,043. 2 Claims. (Cl. 45—28.)



1. In a soap holder, a plate comprising an upwardly disposed end portion, inwardly directed prongs on said upwardly directed end portion, an adjustable jaw slidably mounted on the rear end portion of said plate, prongs on said adjustable jaw, a rack bar slidably mounted on the end portion of said plate, spaced apart gears pivotally mounted on said plate adapted to mesh with the teeth of said rack bar, and cams rigidly attached to said gears adapted to rotate therewith and to engage the end of said adjustable jaw for forcing the same forwardly to cause the prongs of the jaw and the prongs of the forward end of said plate to be embedded in the ends of a cake of soap when said rack bar is moved inwardly.

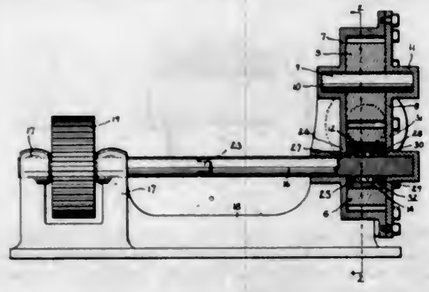
1,689,788. SOUND-REPRODUCING INSTRUMENT. LOUIS G. LARSEN, Jersey City, N. J. Filed Apr. 1, 1925. Serial No. 19,813. 5 Claims. (Cl. 179—116.)



1. In a sound reproducer, an electromagnet, vibrators mounted adjacent to the poles of said magnet, a pair of diaphragms connected with said vibrators and means for selectively preventing the vibration of either of said diaphragms.

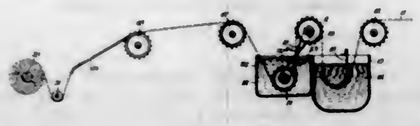
1,689,789. METHOD OF PRODUCING SECTIONAL BOILER DRUMS. GEORGE LASKER, Chicago, Ill. Filed Sept. 19, 1925. Serial No. 57,448. 1 Claim. (Cl. 29—157.4.)

The method of making a boiler drum section, comprising piercing an ingot and thence rolling it so as to thin its peripheral wall and increase the diameter, removing spaced portions of material from the wall to form tube receiving openings and forming a flange laterally of said wall.



1,689,790. DISPLAY DEVICE. ARTHUR LEFEVRE, Jr., Houston, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 3, 1926. Serial No. 152,383. 8 Claims. (Cl. 35—16.)

3. An advertising display device, comprising a pair of vertically disposed converging guides spaced apart at their upper ends and joined together at their lower ends, means disposed at the lower ends of said guides for keeping them taut, and means for continuously discharging liquid between the spaced upper ends of the guides.



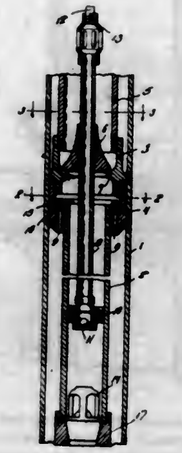
1,689,791. PUMP. JOHN M. MCCLATCHIE, New York, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 29, 1926. Serial No. 151,304. 4 Claims. (Cl. 103—126.)

1. A pump of the class described comprising, a casing having an inlet and an outlet, a pair of intermeshing gears located in the casing, a shaft for the first gear journaled within the casing, a shaft for the second gear journaled in the casing and extending through one side thereof, means for driving the second shaft, a hub formed on the second shaft and on which the second gear is mounted, a metal washer interposed between one end of the hub and the adjacent part of the casing, a second metal washer interposed between the other end of the hub and the adjacent part of the casing, the hub being provided with a recess surrounding the shaft, and a spring located in the recess and

pressing at one end against the hub to force the first washer against the adjacent part of the casing and pressing at the other end against the second washer.

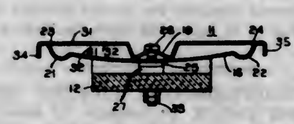
1,689,792. METHOD FOR COATING WIRE FABRIC. JOHN W. MEAKER, Evanston, Ill. Filed Apr. 30, 1925. Serial No. 26,935. 4 Claims. (Cl. 91—70.2.)

1. The method of coating wire fabric which consists in applying a liquid coating to the fabric, separating the wires while the coating is liquid, and positively applying means to the coating at a predetermined point to cause it to harden while said wires are separated.



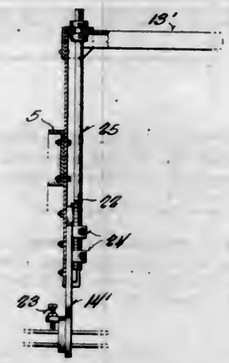
4. The method of coating wire fabric which consists in applying a liquid coating to the fabric, positively driving the fabric at two spaced points, the drive being so related as to permit slack in the fabric between the drive points, yieldingly engaging the fabric between the drive points in such manner as to separate the wire at a predetermined point, and applying to the wires at such point means for hardening the coating.

1,689,793. METHOD OF APPLYING BREAKER STRIPS IN THE MANUFACTURE OF TIRE CASINGS. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 26, 1926. Serial No. 124,940. 3 Claims. (Cl. 154—14.)



1. A method of making a tire casing which comprises forming the carcass portion thereof in flat band form, forming a strip of tread rubber of a length substantially equal to the circumference of the flat band carcass, stretching the strip of rubber to a length substantially equal to the circumference of the tire when expanded to tire form, adhesively securing to the stretched strip of rubber a length of breaker fabric in unstretched condition, permitting the strip of tread rubber to contract to substantially its original length, adhesively securing the combined tread and breaker strips to the flat band carcass, and expanding the carcass into tire form.

1,689,794. DOUBLE-ACTING PUMP. ANDREW P. MORRIS, Snyder, Tex., assignor of one-tenth to C. Frank Sentell, Snyder, Tex. Continuation of application Serial No. 131,922, filed Aug. 24, 1926. This application filed Nov. 8, 1927. Serial No. 231,859. 1 Claim. (Cl. 103—190.)



In a double-acting pump for wells, a cylindrical barrel open at its upper end, well tubing of larger diameter than said barrel, a coupling sleeve embodying a lower section threaded onto the upper end of said barrel, said lower coupling sleeve section having a horizontal internal annular valve seat and being formed with axially extending intake ports in its lower end which open at their upper ends through said seat, said seat and said port directly surrounding the upper end of said barrel, a downwardly seating ring valve associated with said seat, said coupling sleeve further embodying an upper section threaded into the lower section and having a horizontal internal annular valve seat, said tubing being connected to said upper coupling sleeve section, a hollow piston rod having a valved piston on its lower end working in said barrel and provided with outlets at its upper end, a downwardly seating check valve slidably fitted on the piston rod and cooperating with the last named valve seat, the last named valve seat having an internal diameter greater than the diameter of the piston, and said check valve having a diameter lesser than the internal diameter of the tubing, to permit free upward removal of the piston and the check valve with the piston rod from the barrel and the tubing.

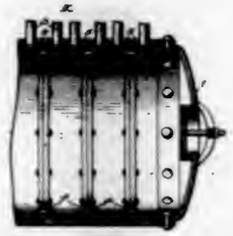
1,689,795. THERMAL-CONTROL SWITCH. AUGUST J. MOTTLAU, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1926. Serial No. 141,712. 9 Claims. (Cl. 200—139.)

1. A thermally-actuable switch comprising a resilient frame having an elongated aperture therein, a bridging member secured to said frame and extending across said aperture and means cooperating with a deformed portion of said frame for applying an initial longitudinal stress to said bridging member.

1,689,796. ATTACHMENT FOR TRACTORS. EDWARD C. MYERS, Milwaukee, Wis., assignor to Wehr Co., Milwaukee, Wis. Filed June 9, 1926, Serial No. 114,791. Renewed May 14, 1928. 10 Claims. (Cl. 180—1.)

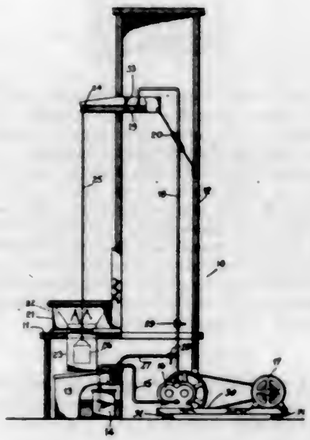
1. An attachment for tractors comprising a pair of frame members adapted to extend along opposite sides of a tractor, steering means for supporting the front end of the frame members, means for clamping the rear end of the frame members to the rear end of the tractor, and movable clamps carried by the frame members for engaging and raising the front axle of the tractor.

1,689,797. FIXTURE FOR SHAVING OFF FILLINGS IN CLUTCH PLATES. ERNEST C. MYERS, Norwich, Conn. Filed Mar. 2, 1927. Serial No. 172,173. 6 Claims. (Cl. 145—129.)



6. A fixture for supporting a clutch plate during the shaving off of fillings which project beyond opposite faces of a plate, said fixture comprising a round base having a flat face formed with a concentric groove to receive the plate, the inner side wall of the groove being of a proper size to snugly fit the inner edge of the plate to prevent lateral movement of the latter, said groove being provided with shelves on opposite sides thereof which are raised a proper distance to support the plate with the depending fillings free from the floor of the groove and with the upwardly extending fillings arranged to project above the flat face of the base the amount to be shaved off.

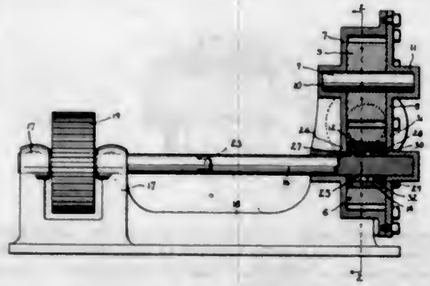
1,689,798. BURNER. FRANK A. NIEBERDING, deceased, East Cleveland, Ohio, by Margaret H. Nieberding, administratrix, East Cleveland, Ohio. Filed Nov. 5, 1925. Serial No. 66,988. 13 Claims. (Cl. 126—92.)



2. A gas burner comprising a frame, a manifold situated below and secured to the frame, said manifold having a

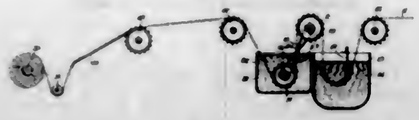
1,689,789. METHOD OF PRODUCING SECTIONAL BOILER DRUMS. GEORGE LASKER, Chicago, Ill. Filed Sept. 19, 1925. Serial No. 57,448. 1 Claim. (Cl. 29—157.4.)

The method of making a boiler drum section, comprising piercing an ingot and thence rolling it so as to thin its peripheral wall and increase the diameter, removing spaced portions of material from the wall to form tube receiving openings and forming a flange laterally of said wall.



1,689,790. DISPLAY DEVICE. ARTHUR LEFEVRE, Jr., Houston, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 3, 1926. Serial No. 152,383. 8 Claims. (Cl. 35—16.)

3. An advertising display device, comprising a pair of vertically disposed converging guides spaced apart at their upper ends and joined together at their lower ends, means disposed at the lower ends of said guides for keeping them taut, and means for continuously discharging liquid between the spaced upper ends of the guides.



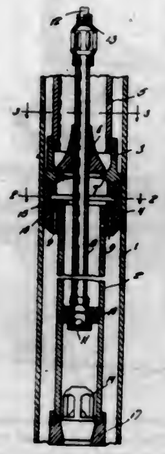
1,689,791. PUMP. JOHN M. MCCLATCHIE, New York, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 29, 1926. Serial No. 151,304. 4 Claims. (Cl. 103—126.)

1. A pump of the class described comprising, a casing having an inlet and an outlet, a pair of intermeshing gears located in the casing, a shaft for the first gear journaled within the casing, a shaft for the second gear journaled in the casing and extending through one side thereof, means for driving the second shaft, a hub formed on the second shaft and on which the second gear is mounted, a metal washer interposed between one end of the hub and the adjacent part of the casing, a second metal washer interposed between the other end of the hub and the adjacent part of the casing, the hub being provided with a recess surrounding the shaft, and a spring located in the recess and

pressing at one end against the hub to force the first washer against the adjacent part of the casing and pressing at the other end against the second washer.

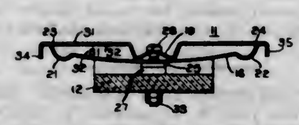
1,689,792. METHOD FOR COATING WIRE FABRIC. JOHN W. MEAKER, Evanston, Ill. Filed Apr. 30, 1925. Serial No. 26,935. 4 Claims. (Cl. 91—70.2.)

1. The method of coating wire fabric which consists in applying a liquid coating to the fabric, separating the wires while the coating is liquid, and positively applying means to the coating at a predetermined point to cause it to harden while said wires are separated.



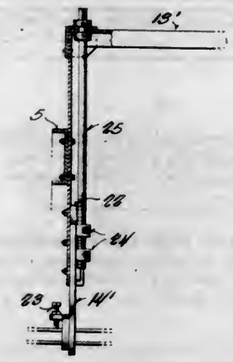
4. The method of coating wire fabric which consists in applying a liquid coating to the fabric, positively driving the fabric at two spaced points, the drive being so related as to permit slack in the fabric between the drive points, yieldingly engaging the fabric between the drive points in such manner as to separate the wire at a predetermined point, and applying to the wires at such point means for hardening the coating.

1,689,793. METHOD OF APPLYING BREAKER STRIPS IN THE MANUFACTURE OF TIRE CASINGS. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 26, 1926. Serial No. 124,940. 3 Claims. (Cl. 154—14.)



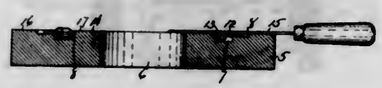
1. A method of making a tire casing which comprises forming the carcass portion thereof in flat band form, forming a strip of tread rubber of a length substantially equal to the circumference of the flat band carcass, stretching the strip of rubber to a length substantially equal to the circumference of the tire when expanded to tire form, adhesively securing to the stretched strip of rubber a length of breaker fabric in unstretched condition, permitting the strip of tread rubber to contract to substantially its original length, adhesively securing the combined tread and breaker strips to the flat band carcass, and expanding the carcass into tire form.

1,689,794. DOUBLE-ACTING PUMP. ANDREW P. MORRIS, Snyder, Tex., assignor of one-tenth to C. Frank Sentell, Snyder, Tex. Continuation of application Serial No. 131,922, filed Aug. 24, 1926. This application filed Nov. 8, 1927. Serial No. 231,859. 1 Claim. (Cl. 103—190.)



In a double-acting pump for wells, a cylindrical barrel open at its upper end, well tubing of larger diameter than said barrel, a coupling sleeve embodying a lower section threaded onto the upper end of said barrel, said lower coupling sleeve section having a horizontal internal annular valve seat and being formed with axially extending intake ports in its lower end which open at their upper ends through said seat, said seat and said port directly surrounding the upper end of said barrel, a downwardly seating ring valve associated with said seat, said coupling sleeve further embodying an upper section threaded into the lower section and having a horizontal internal annular valve seat, said tubing being connected to said upper coupling sleeve section, a hollow piston rod having a valved piston on its lower end working in said barrel and provided with outlets at its upper end, a downwardly seating check valve slidably fitted on the piston rod and cooperating with the last named valve seat, the last named valve seat having an internal diameter greater than the diameter of the piston, and said check valve having a diameter lesser than the internal diameter of the tubing, to permit free upward removal of the piston and the check valve with the piston rod from the barrel and the tubing.

1,689,795. THERMAL-CONTROL SWITCH. AUGUST J. MOTTLAU, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1926. Serial No. 141,712. 9 Claims. (Cl. 200—139.)

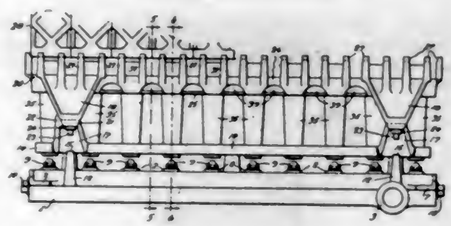


1. A thermally-actuable switch comprising a resilient frame having an elongated aperture therein, a bridging member secured to said frame and extending across said aperture and means cooperating with a deformed portion of said frame for applying an initial longitudinal stress to said bridging member.

1,689,796. ATTACHMENT FOR TRACTORS. EDWARD C. MYERS, Milwaukee, Wis., assignor to Wehr Co., Milwaukee, Wis. Filed June 9, 1926, Serial No. 114,791. Renewed May 14, 1928. 10 Claims. (Cl. 180—1.)

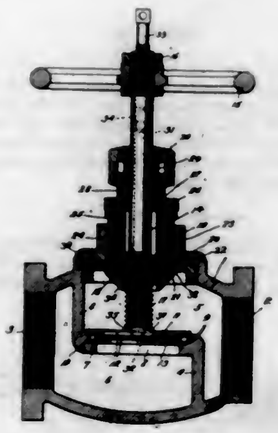
1. An attachment for tractors comprising a pair of frame members adapted to extend along opposite sides of a tractor, steering means for supporting the front end of the frame members, means for clamping the rear end of the frame members to the rear end of the tractor, and movable clamps carried by the frame members for engaging and raising the front axle of the tractor.

1,689,797. FIXTURE FOR SHAVING OFF FILLINGS IN CLUTCH PLATES. ERNEST C. MYERS, Norwich, Conn. Filed Mar. 2, 1927. Serial No. 172,173. 6 Claims. (Cl. 145—129.)



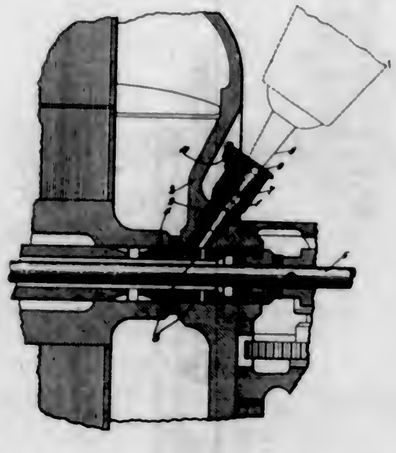
6. A fixture for supporting a clutch plate during the shaving off of fillings which project beyond opposite faces of a plate, said fixture comprising a round base having a flat face formed with a concentric groove to receive the plate, the inner side wall of the groove being of a proper size to snugly fit the inner edge of the plate to prevent lateral movement of the latter, said groove being provided with shelves on opposite sides thereof which are raised a proper distance to support the plate with the depending fillings free from the floor of the groove and with the upwardly extending fillings arranged to project above the flat face of the base the amount to be shaved off.

1,689,798. BURNER. FRANK A. NIEBERDING, deceased, East Cleveland, Ohio, by Margaret H. Nieberding, administratrix, East Cleveland, Ohio. Filed Nov. 5, 1925. Serial No. 66,988. 13 Claims. (Cl. 126—92.)



2. A gas burner comprising a frame, a manifold situated below and secured to the frame, said manifold having a

series of gas emitting orifices that are spaced apart along the upper side of the manifold, the frame having holes in axial alignment with said orifices, and burner tubes re-



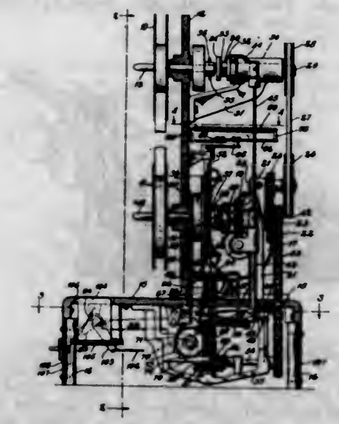
movably supported within said holes, the frame incorporating means for supporting radiants above and in operative relation to the upper ends of the burner tubes.

1,689,799. VALVE. SVEN JOHAN NORDSTROM, Saratoga, Calif., assignor to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed Dec. 14, 1925. Serial No. 75,161. 3 Claims. (Cl. 251—36.)

2. A valve comprising, a casing having an annular valve seat therein, a plug adapted to be seated against the valve seat, a stem extending from the plug outwardly through the casing and having a threaded part, a threaded bushing surrounding the valve stem, a bonnet secured to the casing, said bonnet and bushing having overlapping parts, a flexible ring interposed between the overlapping parts of the bonnet and the bushing, a reservoir for containing a plastic grinding mixture located in the valve stem and extending into the plug, said plug having a hole extending from the reservoir to the bearing surface of the plug, means for putting the plastic substance under pressure to force it out through the hole and thereby slightly separate the bearing surfaces of the plug and valve seat, a packing interposed between the bushing and the bonnet, a nut threaded on the bushing for putting the packing under pressure and thereby holding the bushing and the bonnet against relative movement, and means for rotating the bushing and valve stem to rotate the plug against its seat when the nut has been turned to permit relative movement between the bushing and the bonnet.

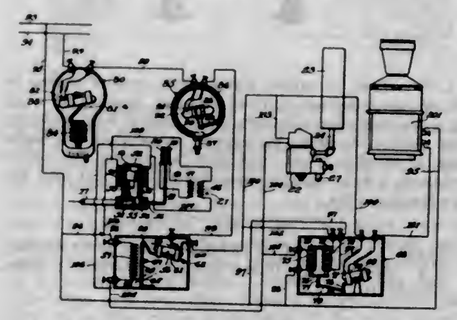
1,689,800. OIL CUP. KING L. PARKER, St. Louis, Mo., assignor to The Emerson Electric Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Apr. 2, 1927. Serial No. 180,444. 2 Claims. (Cl. 184—91.)

2. An oil cup adapted to be connected into a lubricant passage and comprising a chamber of relatively large diameter having an open outer end, a closure for said chamber movable to and from closed position, and a conical wall rigid within said chamber tapering inwardly from the open outer end of said chamber and having an unobstructed opening at its inner end permitting insertion and withdrawal of the spout of an oil can therethrough.



1,689,801. VALVE TAPPET. ARTHUR W. POPE, Jr., Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Mar. 12, 1925. Serial No. 15,092. 1 Claim. (Cl. 123—90.)

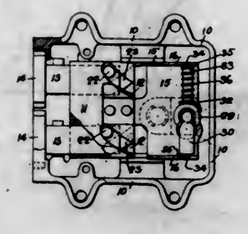
A valve tappet comprising an outer tubular member, a first tubular member within said outer member, a second tubular member within the first member, and a third member within the second tubular member, said first member bearing at one end on the outer member and said second member bearing at one end on the other end of the first member, the third member bearing at one end on the other end of said second member, the second member having a different coefficient of expansion than the first and third members.



1,689,802. FILM-PROJECTION MACHINE. BARTON A. PROCTOR, New York, N. Y., assignor, by mesne assignments, to The Automatic Advertiser, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Oct. 3, 1925. Serial No. 60,166. 5 Claims. (Cl. 242—55.)

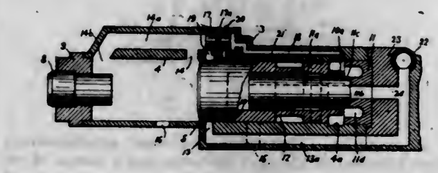
4. In combination, a housing, a support outside of said housing, a pair of reel shafts mounted on said support, a film supply reel mounted on one of said shafts, a film receiving reel mounted on the other of said shafts, driving means for drivingly connecting said reels either to transfer the film from said supply reel to said receiving reel or from said receiving reel to said supply reel, reversing means operatively connected to said driving means for reversing the

direction of travel of said film, said reversing means being located in said housing, a counter in said housing having a control arm, a link in said housing connecting the control arm of said counter with said reversing means whereby the actuation of said reversing means will actuate said counter, and means for locking said housing to prevent tampering with said counter.



1,689,803. CONTROLLING MECHANISM FOR OIL BURNERS. OSCAR C. SCHROEDER, Chicago, Ill. Filed Mar. 12, 1927. Serial No. 174,782. 5 Claims. (Cl. 158—28.)

1. The combination with a burner, of means for operating the burner, electrical mechanism including a circuit controlling the actuation of said means, a switch controlling said circuit, a second switch controlling said circuit, a second circuit, a third switch controlling said second circuit, means controlled by the heat produced by the burner for controlling said third switch, a fourth switch controlling said first circuit, an electro-magnet having two windings and controlling said first-named switch and operable only by energization of both of said windings

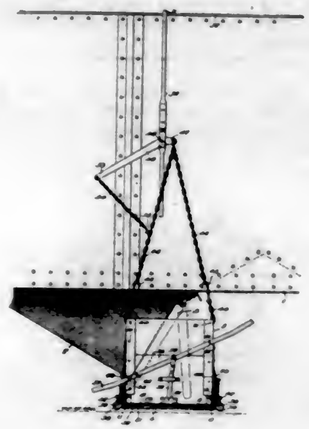


but operating to hold said first-named switch in the position to which it is actuated by said magnet by current flowing through one winding only, said fourth switch controlling both of said windings and said third switch one only of said windings, and means controlled by said third switch for controlling said second switch operating after the lapse of a predetermined length of time to condition said second switch for discontinuing the operation of said first-named means.

1,689,804. LOCK. SAMUEL SEGAL, New York, N. Y., assignor to Segal Lock & Hardware Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 31, 1926. Serial No. 158,135. 9 Claims. (Cl. 70—14.)

1. A lock, including, in combination, a case, a carrier movable within said case, a bolt rotatably supported by said carrier, and a single means associated with said bolt and cooperating with said carrier and case to effect a rotation of said bolt and limit the projection thereof.

1,689,805. PNEUMATIC HAMMER. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed July 30, 1926. Serial No. 125,835. 9 Claims. (Cl. 121—18.)

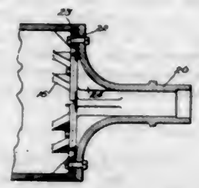


1. A fluid pressure tool comprising a cylinder providing a piston chamber, a piston reciprocable in said chamber and having an internal bore, the end wall of said bore forming a pressure area for driving the piston forwardly, a fixed member extending axially into said piston chamber and into said bore to admit motive fluid continuously to said area, piston controlled means for intermittently feeding and venting motive fluid to the ends of the piston, an automatic valve controlled by said piston for prolonging the feeding of motive fluid to one end area of the piston and for providing an auxiliary exhaust for the other end area, and means utilizing motive fluid from the internal bore of said piston for moving the valve in one direction.

1,689,806. BALLAST-SPREADING DEVICE. BERNARD W. STRAW, Mount Airy, Md., assignor to Straw Ballast Distributer Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 2, 1927. Serial No. 203,118. 14 Claims. (Cl. 105—239.)

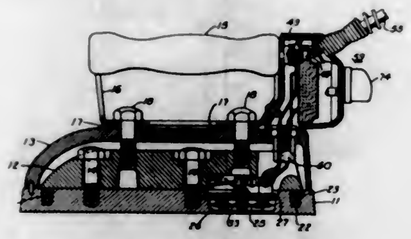
1. In combination, a railway car having an opening for the discharge of ballast or the like, and a ballast

spreading device adapted to receive ballast discharged through said opening and deliver it to the roadbed, said device including a pan member having an opening in the



bottom thereof, and a sliding door for said opening, said door being curved at its ends so as to permit it to shift its angular position in its plane of operation.

1,689,807. HYDROPLANE. CARL H. TRAVER, Binghamton, N. Y. Filed Nov. 27, 1926, Serial No. 151,058. Renewed Apr. 18, 1928. 5 Claims. (Cl. 244—2.)

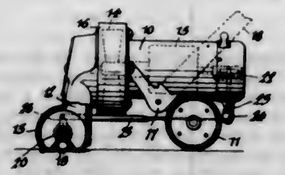


2. An aeroplane comprising pontoons, supplementary runners attached to the said pontoons and a means of extending the said supplementary runners.

1,689,808. RETORT. EDWARD P. VAN STONE, Reading, Mass., assignor to General Alloys Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1927. Serial No. 181,718. 6 Claims. (Cl. 263—48.)

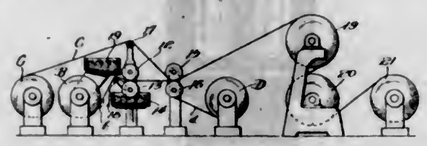
1. In a retort, the combination of a large hollow body portion and a separate relatively small hollow neck secured together, said body portion having a slotted flange extending therefrom, said neck having an outwardly flared portion arranged to engage the flange on said body portion.

1,689,809. THERMOSTATIC DEVICE. VICTOR G. VAUGHAN, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 30, 1927. Serial No. 222,977. 7 Claims. (Cl. 219—20.)



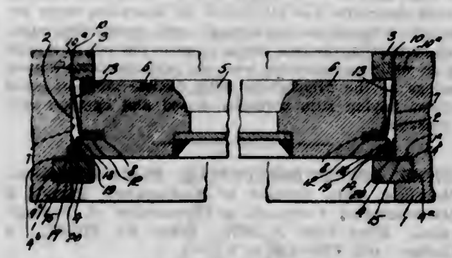
6. The combination with a thermostat, an electric circuit controlled thereby in accordance with a thermal condition to be controlled and a heating element disposed in thermal relation to said thermostat and controlled thereby, of means for controlling the value of current traversing the heating element comprising a plurality of resistor elements and a selector switch for varying the circuit connections of said resistor elements to said heating element.

1,689,810. METHOD OF MAKING METAL ARTICLES. EDMUND MERRIMAN WISE, Cincinnati, Ohio, assignor to Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Nov. 5, 1926. Serial No. 146,511. 5 Claims. (Cl. 29—160.6.)



1. A method of making plated metal articles having intricate irregularities in their surfaces, comprising shaping a base metal substantially to the desired form including said surface irregularities, coating the shaped base metal with a suitable metal, and then subjecting the coated article to a final shaping operation to bring out said surface irregularities.

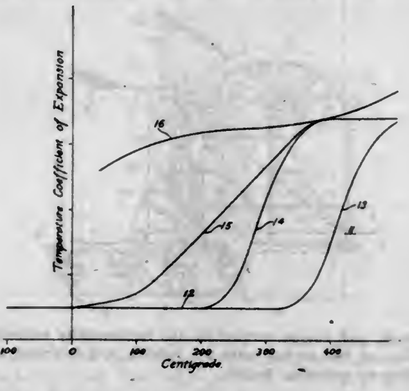
1,689,811. VACUUM CLEANER. MILTON WITT, Buffalo, N. Y. Filed July 12, 1926. Serial No. 121,768. 1 Claim. (Cl. 15—10.)



In a vacuum cleaner, the combination of a frame having a vacuum chamber terminating in a nozzle, a compartment formed in the nozzle below and in communication with said vacuum chamber, said compartment having an opening in its rear wall, an oscillatory brush mounted on said frame and extending through said compartment, the brush having a rock arm thereon operable in said compartment, and actuating mechanism for the brush including a rotary crank member and a link connecting the rock arm with the crank member, said parts being located exterior of the frame and said link passing through said compartment-opening.

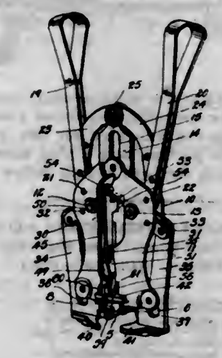
1,689,812. FIBER BOARD AND PROCESS OF MAKING THE SAME. FREDERICK P. WOOD, Adrian, Mich., assignor to Simplex Paper Corporation, Adrian, Mich., a Corporation of Michigan. Filed Nov. 17, 1926. Serial No. 148,798. 6 Claims. (Cl. 154—2.)

6. The process of making a multiple-ply board from fibrous sheets which consists in subjecting one sheet to a water treatment whereby the fibers are expanded, in combining with said water treatment a deliquescent agent whereby to fix the expansion, and thereafter in uniting to opposite faces of the sheet other sheets which form onter plies of the board, substantially as described.



1,689,813. METAL WEATHER STRIP. JOSEPH E. BERGFALK and SVEN A. BERGFALK, New York, N. Y. Filed Oct. 9, 1925. Serial No. 61,426. 3 Claims. (Cl. 20—69.)

1. The combination with a window frame having sash grooves and a sash mounted within said grooves and having grooves at its opposite side edges of weather strips arranged within said grooves, each having a connection at one marginal edge to one side of one of said grooves and having the opposite edge free, the said strip being bent intermediate its edges to form a loop extending into said groove in the sash and having a space-spanning portion between said loop and said connected marginal edge and a contacting track-portion between said loop and the free edge, said free edge having a freely movable flange bent at a right angle to the body of the strip extending in a direction opposite to the said loop and in a plane parallel therewith, and means for resiliently forcing said contacting track portion into engagement with the edge of the sash.

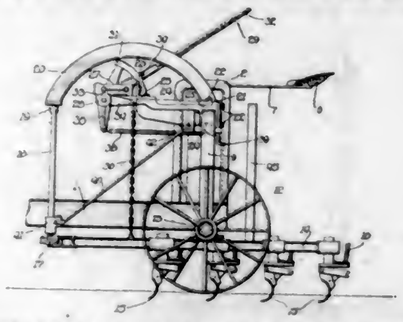


1,689,814. THERMOSTATIC ELEMENT. PORTER H. BRACE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 12, 1926. Serial No. 94,198. 6 Claims. (Cl. 297—15.)

1. A temperature-responsive device comprising metallic elements, one of said elements being an alloy of nickel having relatively high temperature coefficient of expansion, and the other of said elements being an alloy which

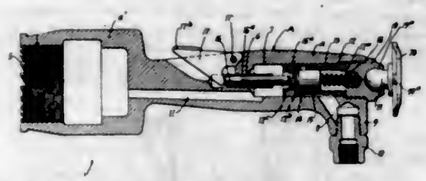
contains iron and nickel in the ratios of from 3 parts of iron to 1 part of nickel and cobalt in amounts varying from 1% to 20% of the alloy content.

1,689,815. CAN-CAPPING MACHINE. CHARLES A. BUNKER, Kansas City, Mo., assignor to H. P. Comstock, Kansas City, Mo. Filed Feb. 2, 1925. Serial No. 6,214. 8 Claims. (Cl. 226—81.)



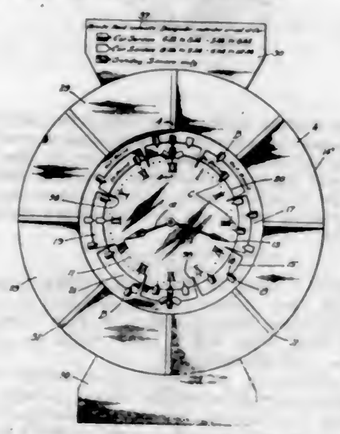
1. A can capping device comprising a pair of pivoted jaw arms, said arms having arcuate slots therein, jaws carried by the arms, supporting means for the arms, engaging said slots, a slide, means connecting the arms to the slide to actuate them into and out of can neck engaging position and a cap receiving means carried by the support.

1,689,816. AGRICULTURAL MACHINE. CECIL P. CAULKINS, New London, Conn., assignor to General Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 2, 1926. Serial No. 126,510. 5 Claims. (Cl. 97—233.)



1. In combination, a relatively low narrow tractor frame, a narrow upright axle frame thereon, a single arched axle having a horizontally extending portion mounted in said axle frame and depending wheel carrying portions spaced from opposite sides of said tractor and axle frames and forming crop straddling arches at opposite sides thereof, a supporting arm carried by the horizontally extending portion of the axle between the depending end

thereof and the axle frame, an arched support carried by and depending from the free end of said arm, implement carrying beams pivoted on the lower ends of said arched



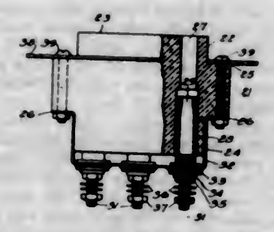
support, and means carried by the horizontally extending portion of the arched axle for raising and lowering said implement carrying beams.

1,689,817. TOOL HANDLE. ANTHONY H. COLLINS, New York, N. Y., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 26, 1925. Serial No. 58,728. 6 Claims. (Cl. 121—36.)

1. A control handle for fluid pressure tools having a hollow grip portion providing a bore for pressure fluid, a manually operable control valve for the pressure fluid within said hollow portion, and a plug member carrying a push plate closing the bore of said hollow portion.

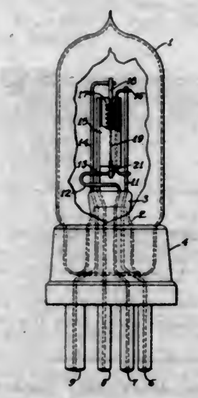
1,689,818. SCHEDULE INDICATOR. JAMES BURGESS DARGAVEL, St. Paul, Minn. Filed Sept. 22, 1925. Serial No. 57,873. 4 Claims. (Cl. 116—129.)

1. A schedule indicator comprising a back having a circular portion, means carrying a series of graduations arranged in proximity to said portion and designating means detachably mounted upon said portion.



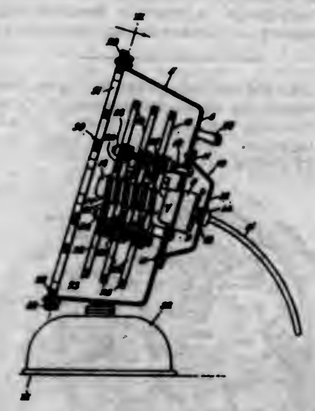
1,689,819. REMOVABLE CHEMICAL RECTIFIER. JAMES KNOX ELDERKIN, Montclair, N. J., assignor, by mesne assignments, to Forest Electric Corporation, Newark, N. J., a Corporation of New Jersey. Filed Nov. 10, 1925. Serial No. 68,181. 2 Claims. (Cl. 175—315.)

1. In a removable electrolytic rectifier the combination comprising a main body of insulating material having a plurality of cells therein, electrodes in the cells, the electrodes of one cell being connected in series with the electrodes of another cell, a top covering of insulating material over the cells and connections, terminals on the base of the main body and conductors leading from the said terminals to the electrodes.



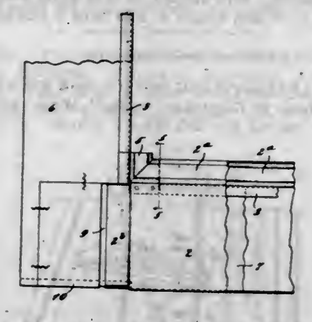
2. In a removable electrolytic rectifier the combination of a main body of insulating material having cells adapted to hold electrolyte and electrodes, an insulating cover for said cells secured against leakage, with ventilating apertures permitting the free escape of gases but not of liquids and an additional covering over the said apertures having openings to the atmosphere with flexible stoppers, said stoppers having slits normally closed and opening only to pressure.

1,689,820. SOCKET RECEPTACLE. FRANK F. FORSHEE, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 9, 1927. Serial No. 218,437. 4 Claims. (Cl. 173—338.)



1. A socket receptacle comprising a flat refractory block having a plurality of longitudinally-extending openings therethrough and lateral shoulder portions at both front and rear thereof, a metal member, of U shape, having its end portions fitting against one set of shoulders and having its intermediate portion located in the plane of the block and adjacent to the rear end thereof, and contact sockets insulatedly mounted on the intermediate portion of the metal member of U-shape and extending into the openings in the refractory block.

1,689,821. NONMICROPHONIC TRIODE. HUBERT M. FREEMAN, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 29, 1924. Serial No. 702,715. 7 Claims. (Cl. 250—27.5.)

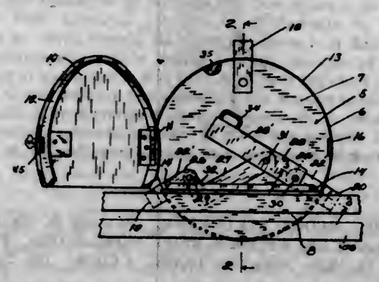


1. In combination, a press, a filamentary cathode and a pair of supporting wires sealed into said press, one of said wires being relatively stiff and the other of said wires being relatively flexible and curved to accentuate its springiness, said filamentary cathode being attached to said wires under a slight tension when cold and said flexible wire being adapted to take up only part of the expansion of said filament upon heating to an operative temperature.

1,689,822. ELECTRIC HEATER. GEORGE B. GALLUP, Bradenton, Fla., assignor to Leach-Gallup Manufacturing Company, Bradenton, Fla., a Corporation of Florida. Filed May 8, 1928. Serial No. 274,881. 4 Claims. (Cl. 219—34.)

3. In an electric heater, a casing; an electrical heating element mounted in said casing; a plurality of axially spaced perforated metallic plates mounted in said casing concentric with said element and in close proximity thereto, adapted to readily transmit heat from said element to the surrounding atmosphere; and a perforated cover and guard plate secured to said casing in front of said heating element.

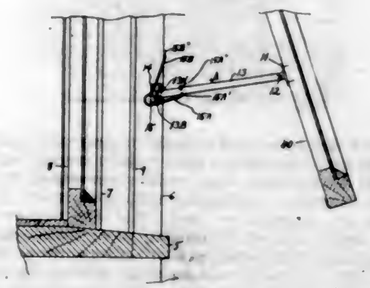
1,689,823. METAL DOOR AND THE LIKE. ALVIN C. GODDARD, Richmond Hill, N. Y. Filed Oct. 7, 1925. Serial No. 61,008. 7 Claims. (Cl. 20—35.)



1. In a metal door, sheet metal U-shape stile and rail members joined together at their ends in overlapping relation and having their edge portions converging to form integral moldings terminating sufficiently short of the ends of the members to meet when the members are joined, and a corner reinforcing piece underlying the meeting ends of the moldings, and having portions thereof conforming in shape to said moldings whereby the corner piece reinforces the corner structure including the molding portions thereof.

1,689,824. ELECTRICAL CONNECTER. LEONARD A. GOELZ, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1926. Serial No. 135,840. 5 Claims. (Cl. 173—363.)

1. A connecter comprising two interchangeable members each of which has a tongue portion and is provided with a slot, a pin disposed in each slot, and a notch provided in each tongue portion for receiving the pin of the other member, whereby the tongue of each member engages the slot of the other member for preventing the separation of the members in a longitudinal or in a lateral direction.



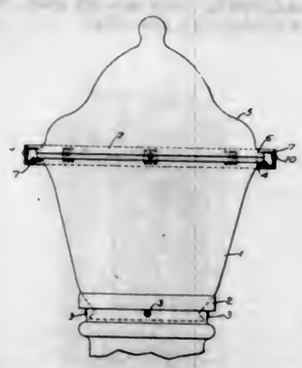
1,689,825. TIRE AND LUGGAGE CARRIER. ANGELO GRILLI, Milwaukee, Wis., assignor of one-half to Dan Livieri, Milwaukee, Wis. Filed Jan. 30, 1925. Serial No. 5,721. 5 Claims. (Cl. 224—29.)

1. In a device of the character described, the combination with a drum having a relatively fixed rim engaging support projecting from its periphery, of a second rim engag-

ing support projecting from the periphery of said drum and including a saddle and a pair of legs, one of said legs being connected with the drum and the other of said legs being radially adjustable with respect to said drum whereby to move one side of said saddle to and from a rim engaging position.

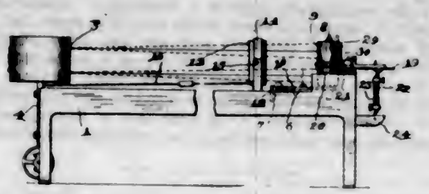
1,689,826. ANTIRATTLING DEVICE FOR STORM WINDOWS. JOHN H. GRININGER, St. Paul, Minn. Filed Feb. 20, 1928. Serial No. 255,757. 2 Claims. (Cl. 292—262.)

1. An anti-rattling device for a storm window hingedly suspended from its upper edge and having a brace bar pivotally connected to the inner side of the storm window and slidable through a bracket fixed in the window frame, said device comprising a helical coil spring, two arms formed integral with said coils and extending normally radially from said coil at obtuse angles to each other, means on the extremity of one arm to engage the upper edge portion of the brace bar outwardly of the window frame bracket, and means on the extremity of the other arm to engage an upright part of the window frame above said bracket when said arms are sprung toward each other.



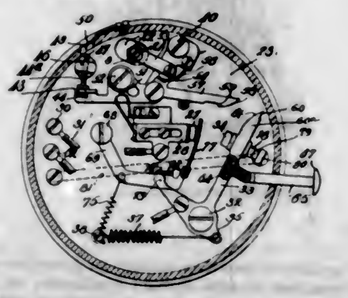
1,689,827. CHAIN HOOK. GEORGE W. GRUNER, Pinckneyville, Ill. Filed Jan. 30, 1928. Serial No. 250,358. 1 Claim. (Cl. 24—68.)

The combination with a chain tightener comprising a lever carried by a chain end and adapted to be passed through a link of another chain end for receiving said last named link in a recess adjacent its pivotal point, of eyes carried by opposite sides of a link, a pivot pin extending through said eyes and lever, said eyes terminating in members twisted around the link sides and terminating at opposite sides of the recess in arms registering with the recess and forming means for preventing excessive movement of the link in the recess and maintaining the link in the recess.



1,689,828. GLOBE STRUCTURE. FRANCIS R. HEALEY, Cincinnati, and WALTER E. BEATY, Norwood, Ohio. Filed Mar. 18, 1925. Serial No. 16,408. 1 Claim. (Cl. 240—100.)

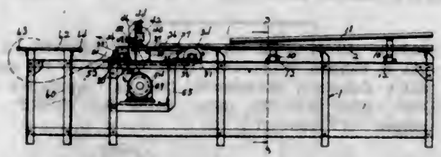
A lamp housing comprising a globe having an outwardly and upwardly extending flange, a top for said globe having a ledge adapted to rest upon and to extend over said flange to protect the exterior of said globe from moisture, and a removable metal band for uniting said globe and said top provided with clips for engaging the globe and top,



said clips having downwardly, outwardly extending portions for leading moisture away from the junction of top and globe.

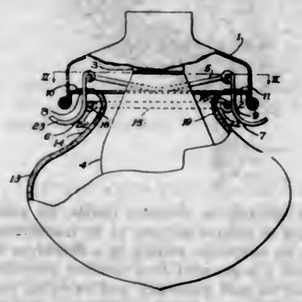
1,689,829. SANDING MACHINE. NORMAN M. HEINTZ, Hespeler, Ontario, Canada. Filed July 27, 1925. Serial No. 46,447. 6 Claims. (Cl. 51—148.)

1. In sanding apparatus, the combination of a pair of spaced rotatably mounted belt-supporting members; an endless sanding belt carried by said members; means for causing a transverse movement of said belt as it travels around said members, comprising a third member around which the belt passes; a pivotally mounted support for said third member; and means for oscillating said support.



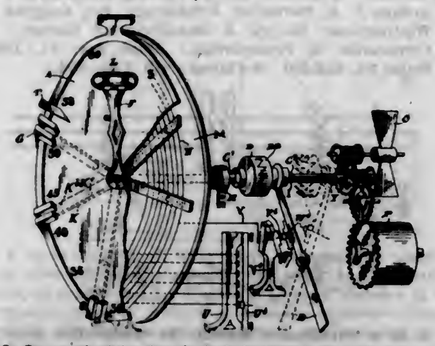
1,689,830. ALARM GAUGE. OTTO W. HEISE, Bridgeport, Conn., assignor, by mesne assignments, to Consolidated Ashcroft Hancock Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 26, 1925. Serial No. 52,706. 13 Claims. (Cl. 200—81.)

1. A device of the class described comprising a circuit closing switch having relatively movable contacts, means tending to separate said contacts, means comprising a pivoted latch normally holding the contacts in engagement, means providing an adjustable fulcrum for the latch,



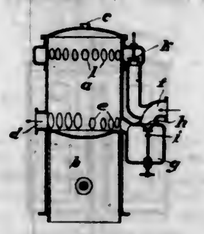
a pressure responsive element, and means connecting the pressure responsive element to the latch whereby to release the latch and to allow the contacts to separate at a predetermined pressure.

1,689,831. TIRE-BUILDING MACHINE. DANIEL E. HENNESSY, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 2, 1924. Serial No. 710,529. 8 Claims. (Cl. 154—9.)



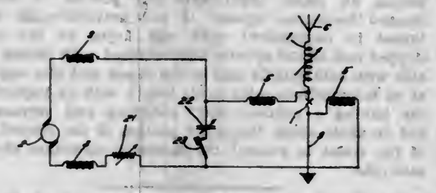
1. A device of the character described comprising relatively movable tables adapted to support strips of material in predetermined superposed relation and means to simultaneously draw said strips from said tables.

1,689,832. GLOBE HOLDER. HOWARD L. JOHNSTON, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 5, 1923. Serial No. 666,697. 6 Claims. (Cl. 240—132.)



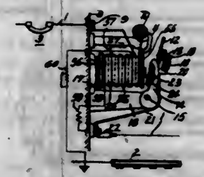
6. A globe holder comprising a base, a plurality of suspension members, a resilient equalizing spring cooperating with said base connecting and supporting said suspension members, means for securing a globe to said suspension members, said suspension members cooperating with said globe and spring whereby dust-proof engagement is made between the globe and base.

1,689,833. SIGNAL CLOCK. CHARLES KESSES, New York, N. Y. Filed Sept. 7, 1921. Serial No. 499,066. 4 Claims. (Cl. 200—37)



2. In an electric signal clock having in combination, an operating lever arranged for operating said clock, a dial having running numbers in a straight line, a series of switches, a rack adapted for carrying an arm with a bridging contact, means arranged for sliding said rack in a parallel direction to said running numbers and a gear wheel meshed to said rack secured to the main shaft of the clockwork to move through said clock mechanism said hand.

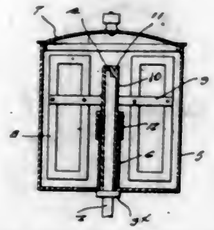
1,689,834. TWO-STROKE-CYCLE INTERNAL-COMBUSTION ENGINE. HERMANN KREISSLE, Ansbach, Germany. Filed Aug. 9, 1926. Serial No. 128,248, and in Germany Sept. 5, 1925. 3 Claims. (Cl. 123—69.)



1. A two-cycle engine comprising a working cylinder having exhaust, scavenging and intake ports in the walls thereof; a chamber associated with said cylinder by means of the scavenging ports, said chamber being of a size to receive a sufficient amount of air to scavenge the cylinder; and an adjustable valve in said chamber for permitting the scavenging air to enter the chamber.

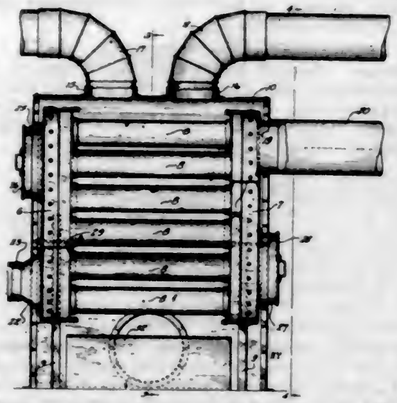
1,689,835. SIGNALING SYSTEM. LOUIS R. KRUMM, New York, N. Y. Filed Nov. 2, 1921. Serial No. 512,197. 4 Claims. (Cl. 250—12.)

3. In an arc transmitter, a source of current, an arc energized therefrom, means including blow-out magnets for causing said arc to generate high-frequency oscillations and means, energized by energy diverted from said blow-out magnets, for impressing a low-frequency modulation on said oscillations.



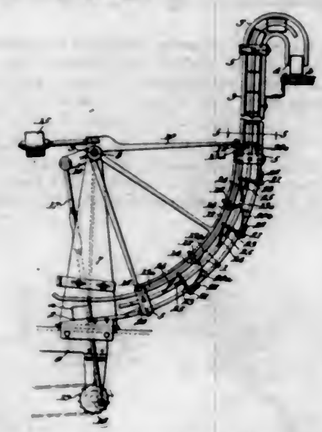
1,689,836. CIRCUIT INTERRUPTER. JOSEPH W. LEGG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 21, 1920. Serial No. 432,321. 2 Claims. (Cl. 175—294.)

1. In an automatic reclosing circuit interrupter system, the combination with a supply circuit, a load circuit, and a circuit interrupter therebetween, of means for controlling the operation of the circuit interrupter comprising a single magnetic circuit and a plurality of magnet coils for energizing said magnetic circuit, one of said coils being permanently connected in parallel relation to the supply circuit to be energized only in response to the potential thereof, another of said coils being permanently connected in series with the supply circuit to be energized only in response to the rate of current traversal betwee



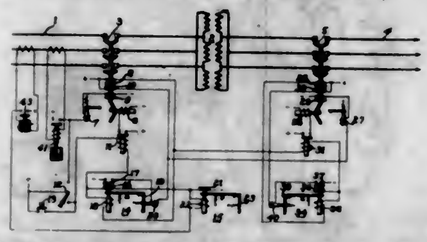
the supply circuit and the load circuit and so disposed as to energize the magnetic circuit differentially with respect to the first-mentioned coil, and a third one of said coils being connected in parallel relation to the circuit interrupter and so disposed as to energize the magnetic circuit differentially with respect to the first-mentioned coil when the circuit interrupter is open.

1,689,837. CREAM-SEPARATOR ATTACHMENT. GROVER W. LEWIS, Macomb, Ill. Filed Dec. 17, 1925. Serial No. 76,024. 1 Claim. (Cl. 259—108.)



The combination of an upright spindle having an enlargement at an intermediate point of its length and also having a stepped upper end, a vessel surrounding the spindle and superposed on said enlargement and having a bottom and a central tubular portion of circular cross section extending upwardly from the bottom and surrounded and spaced from the spindle, and a rotatable sleeve arranged on and receiving the spindle and also arranged and turnable in the said upstanding tubular portion of the vessel and extending above said tubular portion and having an upper imperforate end portion of interior stepped formation opposed to and gravitationally maintained in engagement with and keyed to the upper stepped end of the spindle and equipped with blades movable with said spindle and in the vessel and also equipped at an intermediate point in its length with an imperforate cap having a pendant skirt receiving and surrounding and turnable about the upper portion of the central tube of the vessel to prevent the escape of substance through said tube.

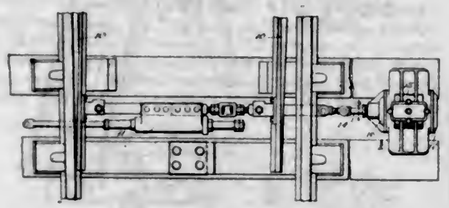
1,689,838. HEATING DRUM. ROY L. MEYERS, Janesville, Wis. Filed June 3, 1927. Serial No. 196,313. 2 Claims. (Cl. 257—168.)



1. A heating device, comprising a casing, a pair of vertically disposed drums therewithin and spaced from the casing, a plurality of horizontally extending smoke tubes connecting said drums and communicating with the interiors thereof, a short pipe communicating with each drum and extending through the casing, said pipes affording access to the tubes for cleaning purposes, a removable cover for the outer end of each of said short pipes, a furnace smoke pipe entering the upper portion of one of the drums through the casing, the interior of said drum having a horizontal partition below said smoke pipe opening, a chimney smoke pipe entering the lower portion of the other drum through the casing, the interior of said drum having a horizontal partition above said smoke pipe opening, a fluid inlet pipe entering the lower portion of the casing, and a fluid outlet pipe extending from the upper portion of the casing.

1,689,839. ELEVATOR OR TRANSFER DEVICE. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Nov. 22, 1924. Serial No. 751,607. 3 Claims. (Cl. 198—27.)

1. In an elevator or transfer device, an arcuate guideway adapted to receive articles to be transferred and provided with an extension ending in a discharge opening for said articles, a segmental feed member pivotally mounted with respect to said guideway and carrying pusher members arranged for cooperation with the articles in said guideway to impart a step-by-step transfer movement thereto, means for imparting an oscillatory movement to said segmental member about its pivot, and means carried by said guideway for holding said articles in advanced position during their step-by-step movement upon oscillation of said segmental member, said articles as they are advanced in said guideway piling one behind the other and finally dropping one by one from said discharge end.

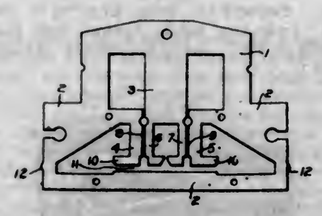


1,689,840. TRANSFORMER SWITCHING SYSTEM. ALFRED J. A. PETERSON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1923. Serial No. 633,670. 9 Claims. (Cl. 175—294.)

1. In a transmission system, the combination with an energy-translating apparatus, of two circuit-controlling devices in separate circuits for connecting the apparatus to

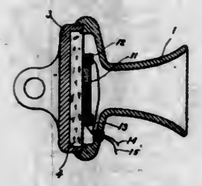
the system, and means independent of the system conductors whereby, upon the actuation of one circuit-controlling device, a similar operation is effected in the other device.

1,689,841. SHOCK ABSORBER. EDWARD W. POWELL, Chicago, Ill., assignor to Pettibone Mulliken Company, Chicago, Ill., a Corporation of New York. Filed May 8, 1926. Serial No. 107,671. 8 Claims. (Cl. 246—291.)



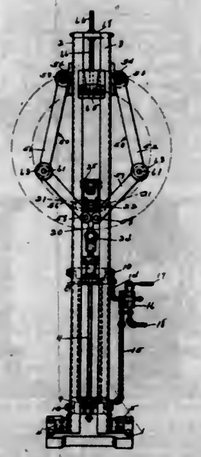
1. In a spring switch of the class described; spring means urging the switch points into normal position; and means for momentarily "locking" the switch points substantially in their compressed position, said means comprising, a cylinder, a piston in the cylinder, a connection between said piston and the switch points, fluid in said cylinder, means permitting substantially free movement of said piston in the movement of the switch points from normal to compressed position, and a by-pass groove in the cylinder wall permitting escape of fluid by the piston during movement of the switch points from compressed to normal position, said by-pass groove being smaller at the end of the cylinder corresponding to the beginning of said last mentioned movement.

1,689,842. IMPIGMENTED EXFOLIATED SHELL AND METHOD OF PRODUCING THE SAME. SIDNEY RAUSCHENBERG, San Diego, Calif. Filed May 17, 1924. Serial No. 714,149. 11 Claims. (Cl. 91—70.)



8. The herein described method of producing impigmented exfoliated shell, consisting in immersing exfoliated natural shell in flaked form in a chemical solution, then boiling and stirring the mixture, then adding a precipitate-forming chemical solution to the above mixture, and then boiling and stirring the whole.

1,689,843. MAGNET STRUCTURE. ARGYLE R. RUTTER, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 6, 1926. Serial No. 120,594. 4 Claims. (Cl. 171—264.)

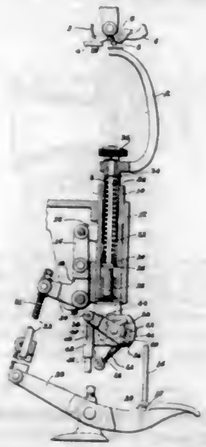


4. In an electrical instrument, a laminated magnet-core structure having substantially uniform flux characteristics comprising a plurality of laminæ disposed in alternately reversed faceto-face relation, whereby inequalities in the laminæ resulting from the manufacturing operations thereon are uniformly distributed with respect to a major axis of the core.

1,689,844. TELEPHONE TRANSMITTER. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 13, 1924. Serial No. 698,879. 7 Claims. (Cl. 179—133.)

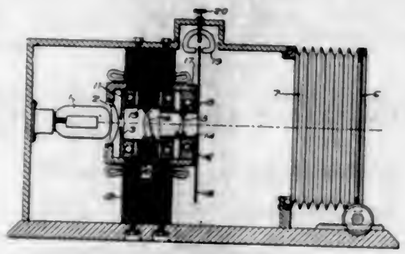
1. A microphone device comprising an elastic resistor which changes its specific resistance with pressure, said resistor being directly exposed to the atmosphere, whereby air pressure variations caused by sound may be translated into electric current variations without the necessity of employing a vibrating diaphragm.

1,689,845. DEVICE FOR INSERTING BAGS. GEORGE F. WIKLE, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 6, 1924. Serial No. 741,952. 13 Claims. (Cl. 18—2.)



1. A device of the character described comprising means engaging the inner periphery of a bag at spaced points, means to fold a portion of the bag inwardly between the engaging means and means to separate the latter as the bag is folded therebetween.

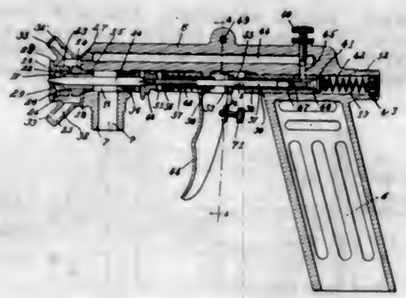
1,689,846. SEWING MACHINE. REGINALD BOYD WOODCOCK, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 17, 1921, Serial No. 470,330, and in Great Britain May 31, 1920. 5 Claims. (Cl. 112—62.)



1. A machine for sewing an unlasted upper to the sole of a shoe having, in combination, stitch forming devices including a needle arranged to pierce the upper and sole in a plane parallel to the surface of the sole, a sole support

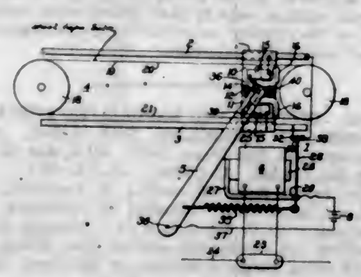
extending within the shoe, means for separating the sole support and stitch forming devices to facilitate the insertion and removal of work, and separate means under the

control of the operator for quickly moving the sole support during the sewing operation to compensate for abrupt variations in the thickness of the work.



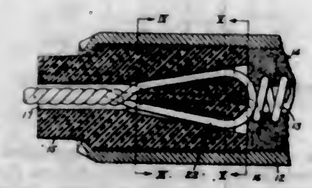
1,689,847. TELEVISION SYSTEM. VLADIMIR K. ZWORYKIN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1927. Serial No. 190,481. 15 Claims. (Cl. 178—6.)

1. In an optical system for transmission of pictures, two light-deflecting devices, means for rotating one of said devices, means for rotating the other of said devices at a different speed dependent upon the speed of the first and means for adjusting the difference.



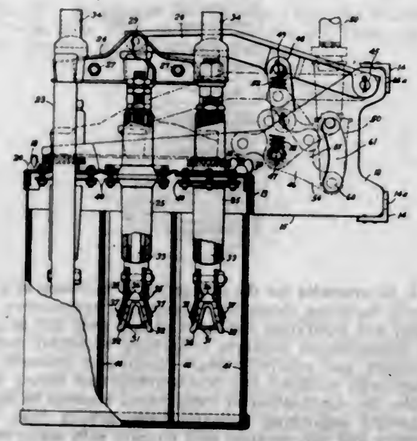
1,689,848. SPRAY GUN. SWAN F. ANDERSON, Rockford, Ill., assignor, by mesne assignments, to Peerless Pneumatic Systems, Inc., Chicago, Ill. Filed June 23, 1924. Serial No. 721,719. 14 Claims. (Cl. 91—45.)

2. A spray gun comprising, in combination, a body having a handle at one end and a nozzle-supporting head at the opposite end, said head having a material-supply passage and said handle having an air-supply passage in coaxial relation, a material-delivery nozzle on said head connected with said passage therein and having a hollow needle valve passing axially through and rearwardly beyond said passage, an air-delivery nozzle concentric with the material-delivery nozzle and receiving air pressure from said air-supply passage in the handle, a tubular valve stem slidable axially in said air-supply passage and having a valve for closing the passage and adapted to open it by rearward movement therein, the rear end of the hollow needle valve extending into the tubular valve stem and



adapted to receive air pressure when the valve stem is moved rearwardly to an open position, and a trigger connected to the needle valve and valve stem for imparting opening movement thereto.

1,689,849. ELECTRICAL MEASURING INSTRUMENT. LOUIS M. ASPINWALL, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1926. Serial No. 127,717. 8 Claims. (Cl. 171—34.)

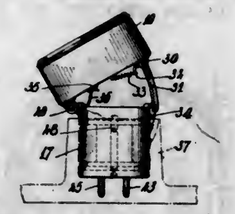


1. In an electrical measuring instrument, the combination with indicating means, of actuating means therefor comprising a continuously movable magnetizable element, and cooperating magnetic means for intermittently transmitting the movement of the element to the indicating means in response to variations in an electrical quantity.

1,689,850. TERMINAL FOR ELECTRIC HEATING UNITS. CHRISTIAN BEROH BACKER, New York, N. Y. Filed July 30, 1927. Serial No. 209,424. 5 Claims. (Cl. 201—67.)

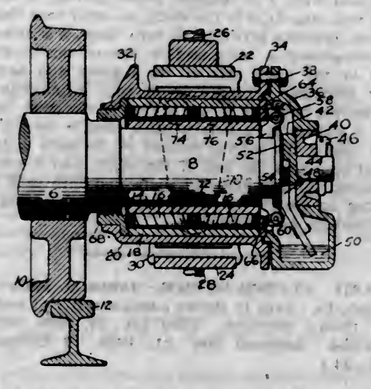
1. In a terminal structure for a tubular heater comprising a tubular casing and a resistor therein, in combination, a plug of electric-insulating material insertable into the end of said casing, said plug having a coaxial opening extending partially therethrough, a plurality of angularly extending openings extending through the other portion of the plug and intersecting with said coaxial opening, one end of the resistor being inserted through one of the angularly-extending openings and the coaxial opening, and a pair of said angularly extending openings, and a terminal lead looped through said coaxial opening and twisted with the end of the said resistor.

1,689,851. CIRCUIT BREAKER. ANDREW H. BAKKEN, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed July 9, 1921, Serial No. 483,384. Divided and this application filed Nov. 26, 1924. Serial No. 752,355. 4 Claims. (Cl. 200—150.)



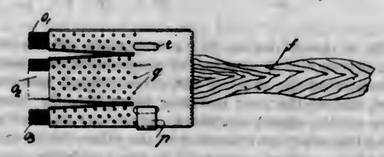
4. In a circuit interrupter, lifting rods having end portions whose cross-sectional areas increase outwardly along their axes and clamping means co-operating with the end portions.

1,689,852. ELECTRICAL SWITCH. HUGH W. BATCHELLER, Marion, Ind., assignor to Bojac Manufacturing Co., Inc., Winooski, Vt., a Corporation of Vermont. Filed Oct. 9, 1926. Serial No. 140,528. 2 Claims. (Cl. 200—77.)



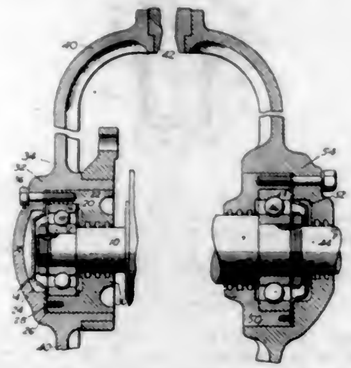
1. A switch comprising a holder including a body of insulating material, a pair of gap-separated terminals fixed to the holder, and insulated from each other by said body, a one-piece movable spherical gap closer of conducting material, the body being provided with means for guiding the closer toward and from the terminals, a stop fixed to and insulated by the body and arranged to limit the movement of the closer from the terminals, and a closer shifter comprising a pair of resilient jaws connected by a neck, and a push and pull member, fixed to and insulated from the neck and movable toward and from the terminals in a guide in the holder, the said jaws exerting a yielding pressure in opposite directions on the spherical periphery of the closer, the arrangement being such that when the shifter is moved in one direction, the jaws contract on the closer and press it against the terminals, and when the shifter is moved in the opposite direction, the jaws again contract on the closer and press it against the stop.

1,689,853. TUBE-SOCKET METER. WALTER E. BEEDE, Penacook, N. H. Filed Feb. 10, 1928. Serial No. 253,317. 4 Claims. (Cl. 171—95)



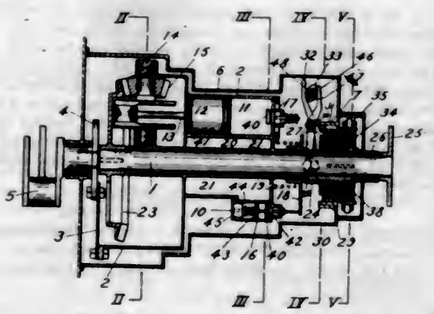
1. A radio tube socket meter, comprising a socket base arranged for engaging in a radio tube socket, an electrical meter pivotally attached on the top thereof at one side, and arranged for tilting into positions at angles to the socket base, and a means for holding the various tilted positions.

1,689,854. JOURNAL BOX. CHARLES W. BENICA, Bloomfield, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 9, 1926. Serial No. 114,854. 10 Claims. (Cl. 105—222.)



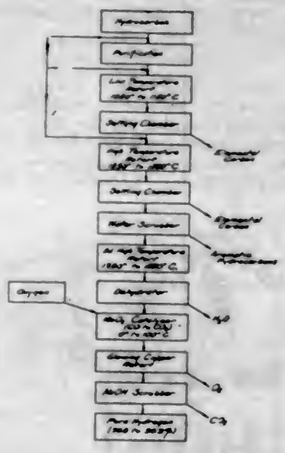
1. In a device of the character described, in combination, an axle, an axle box having a bearing for the axle, a frame, and a load carrying connection between the axle box and the frame and comprising a link having a single pivot pin connection to one of said members, said link being connected to the other of said members by a pair of spaced pivot pins and said other member having openings larger than the pins to allow lost motion between the link and either one of the spaced pins; substantially as described.

1,689,855. STRIPING BRUSH. PETER BREITENBACH, Bochum, Germany. Filed Aug. 19, 1927. Serial No. 214,137, and in Germany Nov. 16, 1925. 3 Claims. (Cl. 15—166.)



1. A striping brush having an exchangeable casing adapted to surround the brush and provided with means to divide the bristles thereof into a number of portions sharply divided from one another.

1,689,856. BEARING MOUNTING. RAYMOND L. BROWN, Bristol, Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed July 2, 1925. Serial No. 41,038. 3 Claims. (Cl. 308—189.)



1. In a bearing mounting, a casing having a detachable end plate with a cylindrical recess therein, a shaft, an inner race ring fixed to the shaft, an outer race ring, antifriction elements between the race rings, a bearing housing comprising a main section closely surrounding the shaft at the inner side of the bearing and having its outer periphery arranged to fit said cylindrical recess, said section having a recess to receive the outer race ring with a sliding fit, a detachabable closure section at the outer side of the bearing secured to the main section and extending across the end of the shaft, and a screw bolt extending through the end plate and into said bearing housing to secure the latter rigidly in the end plate; substantially as described.

1,689,857. CLUTCH DEVICE. JAMES M. BROWN, Pittsburgh, Pa.; Jane D. Brown administratrix of said James M. Brown, deceased. Filed Jan. 11, 1923, Serial No. 611,954. Renewed Mar. 21, 1928. 7 Claims. (Cl. 74—34.)

1. In a clutch device, the combination with a driving and a driven clutch member, of cooperating gear members for connecting the driving and driven clutch members together, one of the gear members being directly connected to one of the clutch members, means for rotatably connecting the other gear member to the other clutch member, a cylinder, a piston connected to the rotatably connected gear member for controlling the operation of said rotatably connected gear member and means whereby during part of the intake stroke of the piston the cylinder is supplied with compressed air.

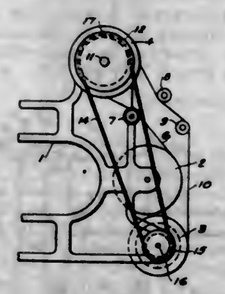
1,689,858. PROCESS FOR THE PRODUCTION OF HYDROGEN OF GREAT PURITY. ARTHUR W. BURWELL, Niagara Falls, N. Y., assignor to Alox Chemical Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1927. Serial No. 214,749. 3 Claims. (Cl. 23—210.)

1. In processes for the production of hydrogen of great purity involving thermally decomposing hydrocarbon material and separating elemental carbon from the mixture of decomposition products comprising elemental carbon, hydrogen and relatively small amounts of aromatic hydrocarbons, methane type hydrocarbons and carbon monoxide, the combination of steps which consists in simultaneously separating aromatic hydrocarbons from said mixture and impregnating said mixture with water vapor by contacting the same with water, converting the methane type hydrocarbons content of the resulting water-impregnated mixture into carbon monoxide by subjecting said mixture to a thermal decomposition treatment at a temperature of from about 1230° to about 1280° C., drying the resulting mixture, admixing with the dried mixture oxygen in amount in excess of that theoretically required for the conversion of the carbon monoxide content thereof to carbon dioxide and converting said carbon monoxide content to carbon dioxide by intimately contacting the free oxygen-containing mixture with a manganese dioxide catalytic mass at a temperature below 100° C., removing unreacted oxygen from the resulting mixture by contacting the same with glowing copper, and separating the carbon dioxide content of the resulting mixture consisting of hydrogen and carbon dioxide by contacting said resulting mixture with caustic alkali solution.

1,689,859. TAPE FASTENER. BRITTON E. BYRD, Gastonia, N. C., assignor to Mill Devices Company, Inc., Gastonia, N. C., a Corporation of North Carolina. Filed Apr. 6, 1928. Serial No. 267,897. 2 Claims. (Cl. 24—35.)

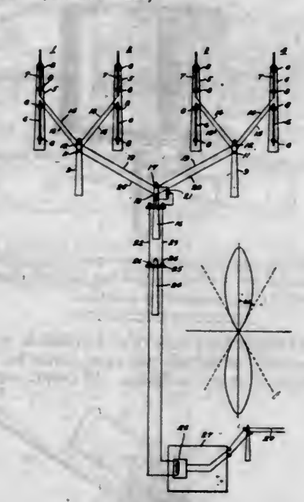
1. A belt fastener including a plate having a longitudinally extending slot through which the ends of the tape to be formed into a belt may be passed and lapped back upon the body of the belt, the ends of the plate of a length to enable them to be bent back upon the ends of the tape to clamp them to the plate body, said slot of a width substantially twice the thickness of the tape.

1,689,860. PROCESS OF PRODUCING PHTHALIC ANHYDRIDE. FRANK A. CANON and CHESTER E. ANDREWS, Pittsburgh, Pa., assignors to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Original application filed June 20, 1922, Serial No. 569,735. Divided and this application filed Nov. 7, 1925. Serial No. 67,685. 5 Claims. (Cl. 260—123.)



1. The process of converting naphthalene to phthalic anhydride, which consists in subjecting a mixture of naphthalene vapor and an oxygen-containing gas to a catalyst at a temperature ranging approximately between 400° C.—450°C., and maintaining said temperature by transmitting the excess heat generated to a composition of cadmium and mercury that will boil at said temperature and causing the composition to be boiled by said excess heat.

1,689,861. FLEXIBLE COUPLING. CHARLES HASKELL CLARK, New York, N. Y. Filed Apr. 30, 1925. Serial No. 27,010. 3 Claims. (Cl. 64—91.)



1. A coupling having hub members adapted to be suitably mounted upon shafts to be coupled, said members having radially extending projections, in combination with a radially adjustable floating endless band housing for connecting said projections together in an axial direction, said housing comprising a plurality of sections and means for adjustably connecting said sections together whereby said projections will be connected circumferentially, said adjustable connecting means permitting the housing as a whole to be radially expanded or contracted with relation to the axis of said hubs to control the degree of radial flexibility of the coupling as a unit, said housing having walls presented toward the respective projections of said hubs.

1,689,862. REROLL DEVICE. GEORGE A. COLLINS, Fresno, Calif., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 23, 1926. Serial No. 131,091. 10 Claims. (Cl. 242—55.)

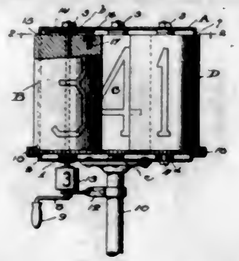
7. The combination with a rotatable element and a flexible element co-operating therewith, of means for alternately positively interlocking said elements to move in unison and permitting relative movement of the elements comprising a projection on one of the elements for alternate indenting engagement and disengagement with the other.

1,689,863. DIRECTIVE ANTENNA SYSTEM. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 27, 1925. Serial No. 39,919. 3 Claims. (Cl. 250—11.)

3. A radio receiving arrangement, comprising a plurality of systems, each system comprising an aerial and an associated counterpoise, a plurality of pairs of bridle wires, the members of any one pair being connected to an aerial and its associated counterpoise, the bridle wires connected to aerials being connected together and thereby connecting conjugate points of the aerials, the bridle wires connected to counterpoises being connected together and thereby connecting conjugate points of the counterpoises and a tuning coil connected to the bridle wires.

1,689,864. POLISH. GEORGE W. DARLINTON, San Pedro, Calif. Filed Jan. 27, 1927. Serial No. 164,127. 8 Claims. (Cl. 134—24.)

1. A polish in the form of a jellified emulsion comprising a relatively large quantity of gasoline, a relatively small quantity of an essential oil, soap and water.



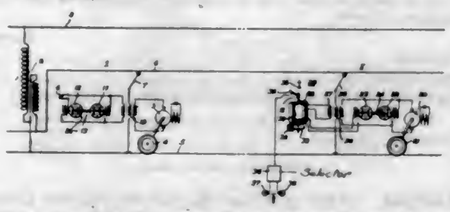
5. A polish in the form of a jellified emulsion in the proportions stated:

	Parts.
Gasoline	6
Eucalyptus oil	1
Aqueous solution of soap, prepared by 1¼ lbs. soap in 3 gals. water	1
Infusorial earth	1

1,689,865. GAME INDICATOR. HENRY FRANCIS DAVIS and JAMES DONALD REID, Honolulu, Territory of Hawaii. Filed Jan. 28, 1927. Serial No. 164,246. 6 Claims. (Cl. 40—68.)

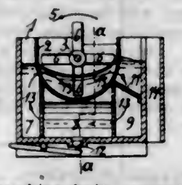
4. A device of the character described comprising a casing having a plurality of openings all facing in different directions, a cylinder rotatively mounted in the casing adjacent each opening, said cylinders being parallel, and having their centers spaced to define a polygon, each cylinder being provided with a series of designating characters, a gear wheel carried by an end of each cylinder and in mesh with a similar gear carried by the adjacent cylinder, the gears having the same number of teeth whereby rotation of one cylinder will rotate all the cylinders in unison and to a like degree to display said characters through said openings, a shaft connected to one cylinder and extending

outside of the casing, a separate indicator mounted upon said shaft outside of said casing and rotative therewith, said indicator carrying a series of characters similar to



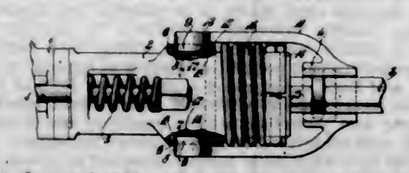
those carried by the cylinders, means for rotating said shaft, and means for resiliently locking the cylinder on said operating shaft in any operative position.

1,689,866. HAND SEED PLANTER. FREDERICK W. ERICKSON, Aurora, Ill. Filed Nov. 16, 1922, Serial No. 601,254. Renewed Apr. 2, 1928. 4 Claims. (Cl. 111—82.)



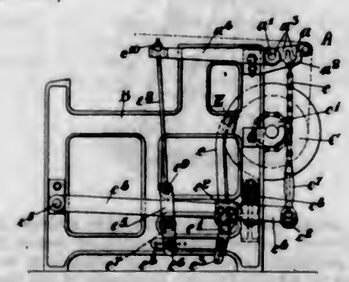
1. A seed planter comprising a lower plate having a depending combined furrow opener and seed delivery spout, an upper plate pivoted on the lower plate for transverse oscillatory movement, and a seed magazine on the upper plate, said two plates having coincident apertures that afford a port through which seed is discharged from the seed magazine into the combined furrow opener and seed delivery spout.

1,689,867. SIGNALING SYSTEM. ROBERT D. EVANS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 28, 1924. Serial No. 716,360. 1 Claim. (Cl. 177—352.)



In an electrical system in which two separated vehicles derive their energy from a common trolley circuit supplied with alternating current of predetermined frequency, the combination with a signaling set on one vehicle consisting of a motor energized from the trolley and a generator drive thereby to develop an electromotive force of a frequency other than that of the system, means connecting the generator to the trolley to supply such different frequency thereto, means for controlling the generator, means on the other vehicle comprising an electro-responsive device having two windings, one of which is energized from the trolley and subjected to voltages of the system frequency and of the impressed frequency, means connected to the other winding to impress a voltage of frequency corresponding to that impressed upon the trolley by the signaling set, an auxiliary circuit and means operative in accordance with the frequencies impressed upon said windings for controlling said auxiliary circuit to effect a desired result.

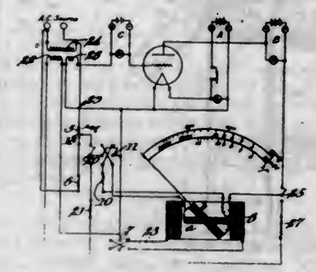
1,689,868. MACHINE FOR WASHING FRUITS AND VEGETABLES. WILHELM FINK, Bonn-on-the-Rhine, Germany. Filed June 17, 1925, Serial No. 37,839, and in Germany Oct. 9, 1924. 1 Claim. (Cl. 146—197.)



A machine for washing fruits, vegetables and the like, consisting of a tank adapted to contain washing fluid, sieve means and rotatable agitator means therein adapted to contain and agitate the objects to be washed mounted in the upper portion of said tank, vertical partitions parallel to axis of said rotatable agitator dividing the lower portion of said tank into compartments, said tank being provided with a passage permitting a flow of said washing fluid from one outermost compartment to the other and a sieve interposed in the path of fluid flow caused by the rotation of said rotatable agitator.

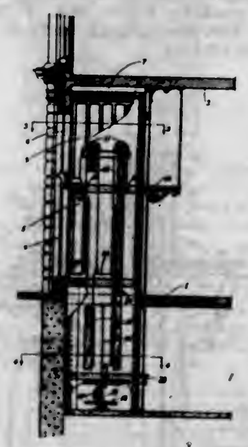
1,689,869. ROCK DRILL. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Aug. 7, 1926. Serial No. 127,856. 18 Claims. (Cl. 121—32.)

1. In a rock drill, a chuck housing having laterally projecting lugs presenting arcuate bearing surfaces, a retainer yoke pivotally mounted on said chuck housing and having cylindrical portions cooperating with said arcuate bearing surfaces, and means for resiliently maintaining said cylindrical portions in engagement with the bearing surfaces on said lugs comprising an annular member surrounding said chuck housing and engaging said cylindrical portions, a member clamped to said chuck housing and a spring interposed between said annular member and said clamp.



1,689,870. WEIGHTING MOTION OF LOOMS FOR WEAVING. WILLIAM GLEDHILL, Barkisland, near Halifax, England. Filed July 21, 1926, Serial No. 124,040, and in Great Britain July 30, 1925. 4 Claims. (Cl. 139—107.)

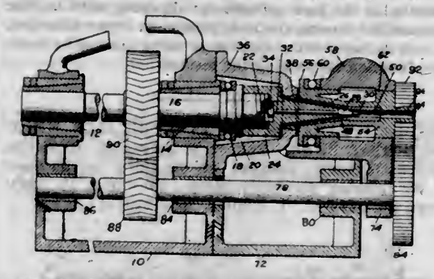
1. In a loom weighting motion, the combination with a warp beam, of two levers, a flexible element connecting the levers and having a frictional connection with the beam,



one lever having a warp engaging member, a link connection between said levers, and means controlled by the decrease in diameter of the beam for controlling said link connection to swing the levers relatively to one another and slacken said flexible element.

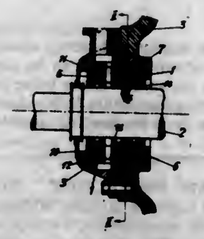
1,689,871. APPARATUS FOR TESTING VACUUM TUBES OF THE AUDION TYPE. WILLIAM NELSON GOODWIN, Jr., Newark, N. J. Filed May 18, 1926. Serial No. 109,999. 22 Claims. (Cl. 250—27.)

1. An electrical measuring instrument for vacuum tubes of the audion type comprising in combination, a ratio meter, means for connection to a source of alternating current, and means to impress on the ratio meter currents which are proportional to the electrical properties involved in the fundamental definition of a constant of the tube, whereby the value of the constant is directly indicated on a scale.



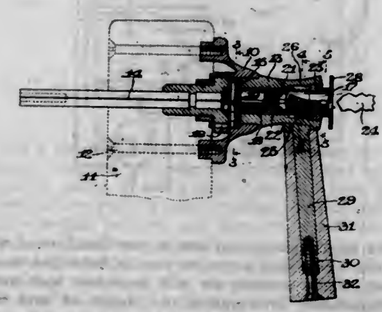
1,689,872. DISPLAY WINDOW. HAROLD C. HARLAN and WALTER J. ZIMMERMAN, Dayton, Ohio. Filed Mar. 10, 1921. Serial No. 451,368. 3 Claims. (Cl. 20—40.4.)

1. In a display window having a sight opening provided with a transparent closure, a closed housing arranged in the rear of said opening and extending above and below the same, a plurality of display compartments mounted for vertical movement in said housing, said compartments being normally closed on all sides except that side adjacent to said sight opening, and means to prevent the passage of dust about said compartments.



1,689,873. WINDING MACHINE. JACOB C. HENNY, East Orange, and RAYMOND H. CRAMER, Newark, N. J., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 3, 1926. Serial No. 120,469. 18 Claims. (Cl. 153—64.)

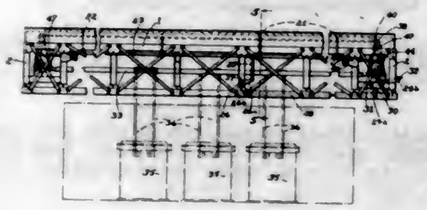
1. In a machine of the character described, an inner cone member having an external conical face, an outer cone member having an internal conical face surrounding the inner conical face, and means for causing a strip of material



to be fed spirally between and in contact with said conical faces to form a coil of gradually decreasing diameter; substantially as described.

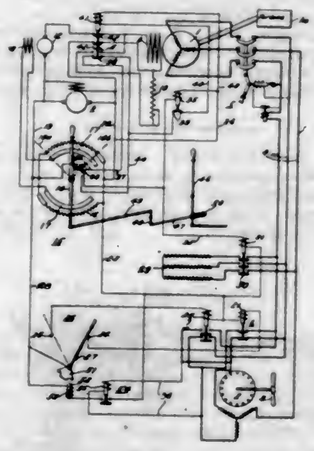
1,689,874. STUFFING BOX FOR SHAFTS AND THE LIKE. ASMUS JABS, Zurich, Switzerland. Filed Aug. 29, 1924, Serial No. 734,910, and in Switzerland Sept. 3, 1923. 2 Claims. (Cl. 286—9.)

1. In a packing for rotating machine parts comprising at least one ring having radially arranged chambers, a packing element in each chamber, each element smaller than the chamber and together with the walls of the chamber forming a space to be filled with fluid of high pressure leaking to said space between the front face of said element and the adjacent chamber wall, means to simultaneously throttle and supply leakage fluid of medium relative pressure from said space to the packing face of said element and means to supply a portion of the leakage fluid passing into said chamber to the opposite parallel face of said element.



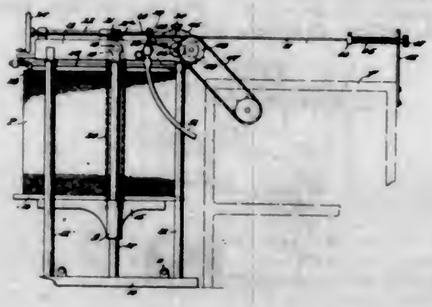
1,689,875. HANDLE LOCK. EDWARD N. JACOBI, Milwaukee, Wis., assignor, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 28, 1921. Serial No. 465,166. 5 Claims. (Cl. 70—91.)

1. A movably mounted member, a lock cylinder mounted to turn in the member to lock the handle when turned in one direction and to unock it when turned in the other di-



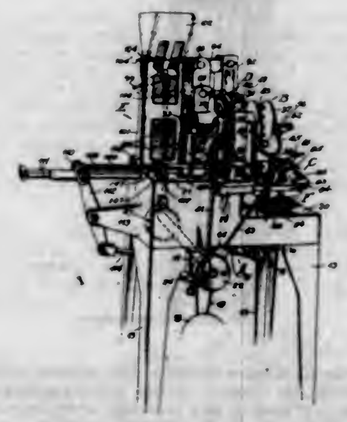
rection, means for locking the lock cylinder against turning in the direction for unlocking the member, and a removable key fitting in the lock cylinder for disabling said locking means and for turning the lock cylinder in either direction, said lock cylinder being capable of being turned by hand in the direction for locking the member.

1,689,876. APPARATUS FOR ELECTRICALLY HEATING METAL BARS. ERNEST S. JEFFERIES, Hamilton, Ontario, Canada, assignor of one-third to Ebenezer A. W. Jefferies, Worcester, Mass. Filed Dec. 19, 1921. Serial No. 523,502. 17 Claims. (Cl. 219—11.)



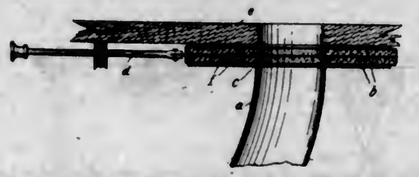
15. In an electric heater, a heating chamber for long bars and a heating circuit adapted to be completed by a bar in said chamber, the said chamber being so constructed as to enclose the bar and maintain it in a heated condition following its removal from the heating circuit.

1,689,877. MARINE PROPULSION. GUSTAF ADOLF JUHLIN, Sale, and LEONARD MILLER, Whitefield, England, assignors, by mesne assignments, to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 26, 1921, Serial No. 448,275, and in Great Britain Mar. 11, 1920. 5 Claims. (Cl. 172—8.)



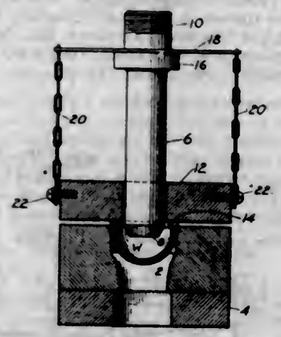
1. In a marine propulsion system, the combination with an alternating-current generator and an induction motor, of a field-magnet winding for said generator, and means for automatically interrupting the circuit of said field winding when the voltage of said generator has been reduced to a predetermined value and for simultaneously effecting dynamic braking of said generator.

1,689,878. SHEET-FEEDING DEVICE. WILLIAM M. KELLY, Westfield, N. J., assignor to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Dec. 27, 1922, Serial No. 609,320. Divided and this application filed Apr. 15, 1927. Serial No. 184,118. 8 Claims. (Cl. 271—47.)



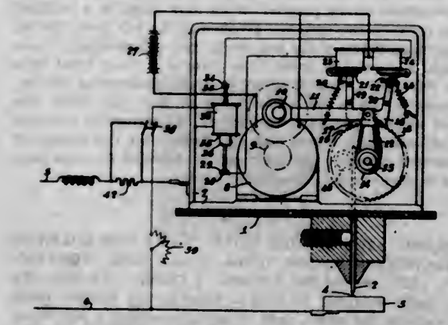
1. In a device of the character described in combination, a pneumatic sheet forwarding means including a valve, means to open and close said valve during each cycle of operations, and manual means operable from a remote point, to maintain said valve open and thereby render the forwarding means inoperative.

1,689,879. MACHINE RELATING TO THE PRODUCTION OF CANDY. RAY W. KROUT, Newark, N. J., assignor, by mesne assignments, to Racine Confectioners' Machinery Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 22, 1922. Serial No. 608,431. 15 Claims. (Cl. 107—8.)



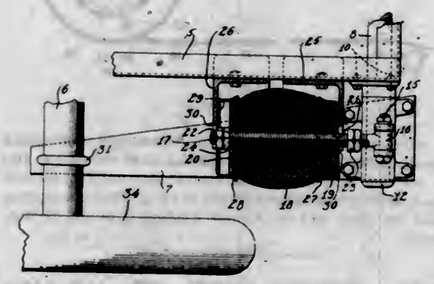
15. In a lollypop machine, a turntable having a plurality of mold cavities and stick-receiving grooves disposed radial of said turntable and communicating with said cavities respectively, a plunger adapted to cooperate with said cavities successively, means for rotating said turntable to bring said cavities successively into position to cooperate with said plunger, a stationary member having a stick groove therein into alinement with which the grooves in the turntable are brought successively, means for feeding sticks one by one into said stationary groove, and a plunger adapted to move a stick endwise from the stationary groove into an alined groove in the turntable.

1,689,880. SOUND-REPRODUCING INSTRUMENT. HEINRICH JOHANNES KÜCHENMEISTER, Berlin, Germany. Filed Sept. 24, 1926, Serial No. 137,591, and in Germany Oct. 2, 1925. 4 Claims. (Cl. 181—27.)



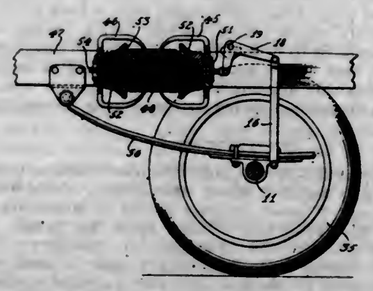
1. The combination with a sound reproducing instrument having a sound conduit, of a sound damper projecting into said conduit, said damper comprising perforated metal plates, apertured damping material between the plates, and tongues on the plates capable of being bent into engagement with portions of the wall of the aperture in the damping material.

1,689,881. WORK-LOCATING APPARATUS. CHARLES W. LECK, Newark, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 16, 1924. Serial No. 713,742. 4 Claims. (Cl. 113—49.)



1. In apparatus for locating a curved piece of work in a die, a plunger, a die to receive the piece of work, a work locating plate slidable on the plunger, and a flexible connection between the plate and the plunger; substantially as described.

1,689,882. AUTOMATIC WELDING APPARATUS. ALLIS M. MACFARLAND, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 18, 1926. Serial No. 109,853. 13 Claims. (Cl. 219—8.)

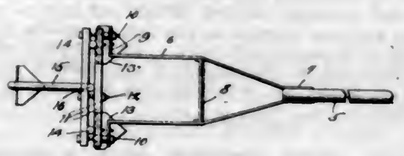


1. An electric arc device comprising a consumable electrode, a continuously operating reciprocating power mechanism, a feeding roller in engagement with said electrode, a ratchet mechanism associated with said feeding roller, a pair of oppositely directed pawls secured to said reciprocating mechanism and yieldably engaging said ratchet mechanism, and electro-responsive means for disengaging but one of the respective pawls at a time from said ratchet mechanism in accordance with the condition of the arc.

1,689,883. VEHICLE SUSPENSION. HENRY G. MCCOMB, New York, N. Y., assignor to The Mechanical Rubber Company, Cleveland, Ohio, a Corporation of New Jersey. Filed Mar. 11, 1926. Serial No. 93,875. 6 Claims. (Cl. 267—21.)

1. A vehicle suspension unit comprising a substantially rigid lever, a block of rubber having an orifice therethrough, means for supporting said block, a bolt connected to said lever and extending therefrom through said block in said orifice, and nuts threaded on said bolt on opposite sides of said block causing said block to be compressed when said bolt is moved longitudinally of said orifice in either direction beyond the normal position by movement of said lever.

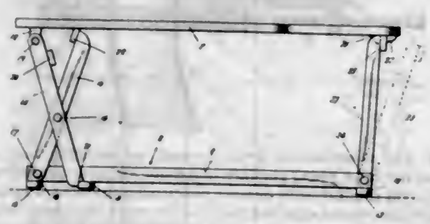
1,689,884. SHOCK ABSORBER. HENRY G. MCCOMB, New York, N. Y., assignor to The Mechanical Rubber Company, Cleveland, Ohio, a Corporation of New Jersey. Filed Mar. 11, 1926. Serial No. 93,876. 2 Claims. (Cl. 267—21.)



1. In a shock absorber, cup shaped members oppositely disposed, tubular projections on said cup shaped members, supporting means in which said projections slide, a block of resilient material having an orifice therethrough, said block extending between said members, a bolt extending through said orifice, and nuts on said bolt on opposite sides of said block, the nut on one side of said block acting to compress said block into the member on the opposite side thereof as said bolt is drawn toward this member, and a nut on the opposite side of the block acting to compress the block into the other member when said bolt is drawn in the opposite direction.

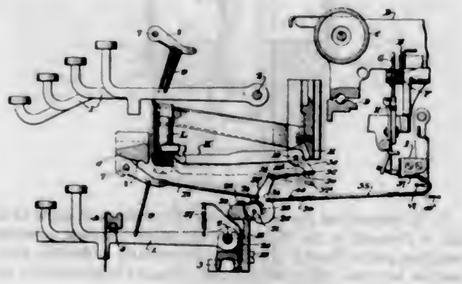
1,689,885. TRACTION ATTACHMENT FOR AUTOMOBILES. WILLIAM ROBERT MCLEAN, Lower Napan, New Brunswick, Canada, assignor of one-half to Thomas Alexander McLean, Lower Napan, New Brunswick, Canada. Filed Mar. 1, 1928. Serial No. 258,283. 3 Claims. (Cl. 238—14.)

1. A traction attachment for an automobile, comprising a shackle having a metal plate curved to fit across the tire of a traction wheel, securing means associated with said plate, a flexible element connected to the plate for wrapping around the tire, and an anchor connected to the flexible element.



1,689,886. COMBINED SHOVEL, HOE, AND RAKE. ADOLF J. MEENTS, Albert City, Iowa. Filed Nov. 11, 1927. Serial No. 232,639. 2 Claims. (Cl. 97—58.)

1. A garden implement including a handle, an extension at one end of the handle, the extension embodying a pair of spaced bars having right angled ends, a head including transversely disposed bars, shovels having shanks, said shanks adapted to be positioned between the transversely disposed bars of the head, and bolts extending through the transversely disposed bars and right angled ends for securing the shanks between the transversely disposed bars.



1,689,887. IRONING TABLE. WALTER C. MOORS, Owensboro, Ky.; Walter Y. Moors, administrator of said Walter C. Moors, deceased, assignor to Sue Y. Moors, Owensboro, Ky. Filed Mar. 3, 1925, Serial No. 12,936. Renewed Mar. 26, 1928. 2 Claims. (Cl. 68—10.)

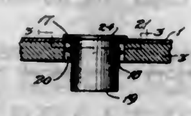
1. An ironing table comprising a base, a board, supporting means for one end portion of the board connected with the base and foldable adjacent to the base, other supporting means hingedly mounted on the base to be disposed under the other end portion of the board, the first named supporting means having a hinge connection with the board to enable the board to be swung upwardly and also having a portion between said hinge connection and secondnamed supporting means on which the board is seatable to support the board even though the secondnamed supporting means is disengaged from the board, the secondnamed supporting means having a cross bar at its upper end, and a pair of spaced transverse cleats secured to the bottom surface of the board to receive said cross bar between them and having their opposite sides bevelled to enable the cross bar to pass readily under either cleat to a position between the cleats, the secondnamed supporting means being free to swing either outwardly beyond the corresponding end of the board or inwardly adjacent to

the base under the board when said cleats are disengaged from said cross bar, the board when swung upwardly on the hinge connection being removable from said portion of the firstnamed supporting means and from said cross bar.

1,689,888. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, and GEORGE F. HANDLEY, Glendale, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 16, 1926. Serial No. 135,904. 20 Claims. (Cl. 197—30.)

16 In a typewriting machine having the usual key board and a shifting type segment with type bars pivotally mounted therein, and in which the key levers are pivoted in front of the type bar pivots; connections between the key levers and the type bars which comprise a series of intermediate levers pivoted on an axis lying in a vertical plane between the type bar pivots and the key lever pivots, connections between the key levers and intermediate levers including a series of front links pivoted at their front ends to a fixed part, and a series of links connecting the intermediate levers with the heels of the type bars, the pivots of the type bars, the points of connection between the intermediate levers and the links, and the points of connection between the links and the heels of the type bars lying in arcs of three concentric circles.

1,689,889. ADJUSTABLE HOSE CLAMP FOR MILKING MACHINES. ROLAND NUNES, Corona, Calif. Filed Feb. 24, 1927. Serial No. 170,605. 1 Claim. (Cl. 251—5.)



A clamp adapted to hold a plurality of flexible tubes and deform the same, said clamp comprising a flat sheet of material bent upon itself to form substantially parallel arms normally tending to be repelled, the outer ends of said arms being in the form of a serpentine and providing

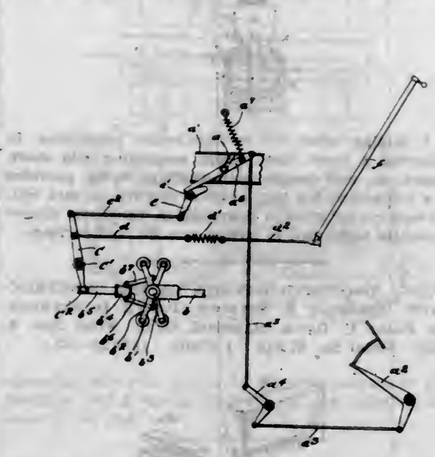
troughs and crests, the troughs of one of said arms being closer together than the troughs of the other of said arms, and a collar slidable on said member adapted to force

said arms towards each other, and an outwardly sprung portion on said member adjacent its bend adapted to prevent said collar from being removed.

1,689,890. DESK COVER. SAMUEL J. ROBERTS, Scranton, Pa. Filed Nov. 17, 1927. Serial No. 233,988. 4 Claims. (Cl. 45—68.)

1. A desk having a wooden top provided with an ink-well aperture, an envelope covering said top and slidably mounted thereon and having an aperture registering with said ink-well aperture, and a cylindrical locking member seated in said apertures and having a flange engaging the top of said envelope and having laterally projecting prongs embedded in said desk top to lock the envelope to said desk top.

1,689,891. PROCESS OF PRODUCING CALCIUM ALUMINATE CEMENT. EMILE MARCEL ROCHE, Castelnau-le-Lez, France, assignor to Urbain Bellony Voisin, Cette, France. Filed Dec. 4, 1924, Serial No. 754,003, and in France May 6, 1924. 4 Claims. (Cl. 106—25.)



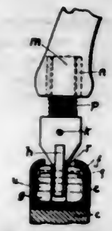
1. A process for the manufacture of an aluminous cement, comprising, burning a mixture of bauxite and a calcareous material at a temperature of about 900 to 1000 degrees centigrade, during a long period.

1,689,892. WRINKLING FINISH. FRANK BRIAN ROOT, Newark, N. J., assignor to Flood & Conklin, Newark, N. J., a Corporation of New Jersey. Filed July 13, 1928. Serial No. 292,883. 7 Claims. (Cl. 134—26.)

1. An improved varnish or enamel composition for producing wrinkled finishes comprising China wood oil and a wrinkle finish resin in proportions not less than about seven and not more than about seventeen gallons of oil per hundred pounds of the resin, at least the major portion of said oil being pre-oxidized by blowing, a drier and a thinner.

1,689,893. INTERNAL-COMBUSTION ENGINE. FREDERICK HENRY ROYCE, West Wittering, near Chichester, England, assignor to Rolls-Royce Limited, Derby, England. Filed July 29, 1925, Serial No. 46,836, and in Great Britain Aug. 6, 1924. 4 Claims. (Cl. 264—3.)

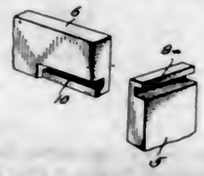
1. In a motor vehicle, an engine having a butterfly throttle valve rotatable therein, a lever fixed centrally to said valve at the pivot axis thereof, a spring connected at one end to one arm of said lever and at its other end to a fixed part of the vehicle to maintain said valve normally closed, manually operated means connected to said arm to rotate said valve against the tension of said spring, a second lever pivoted about a fixed axis on said vehicle and having one arm shaped to provide a cam face in contact with the other arm of the first named lever, a governor rotatable by said engine, and means connecting said governor to the other arm of the second lever to control the operation thereof, said cam face being shaped to provide the greater mechanical advantages at small openings of the valve.



1,689,894. METHOD OF SPINNING ARTIFICIAL FILAMENTS. RUDOLF SAJITZ and FRIEDRICH POSPIECH, Dresden, Germany, assignors to Chemische Fabrik Pott & Co., Dresden-N., Germany. Filed June 14, 1926, Serial No. 116,012, and in Germany June 17, 1925. 4 Claims. (Cl. 18—54.)

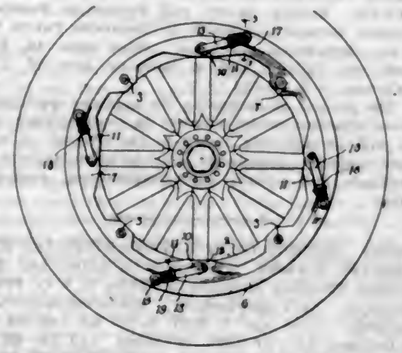
1. The process of improving the spinning qualities of cellulose-solutions, which consists in treating such solutions with precipitating agents in the presence of naphthalene-sulphonic compounds, containing substituted alkyl-radicals and several sulpho-substitution groups in the ring.

1,689,895. METHOD OF SPINNING ARTIFICIAL SILK. HERMANN SCHMIDT, Wiesdorf-on-the-Rhine, and EMIL HUBERT, Elberfeld, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Apr. 4, 1927, Serial No. 180,994, and in Germany June 11, 1926. 4 Claims. (Cl. 18—54.)



1. Process for the manufacture of artificial silk from a cuprammonium cellulose solution which comprises spinning the solution into an aqueous precipitating bath containing dissolved carbon dioxide.

1,689,896. FOLDING HOOD FOR CARRIAGE BODIES. XAVER SEITZ, Emmishofen, Switzerland. Filed Apr. 23, 1927, Serial No. 186,134, and in Switzerland Apr. 28, 1926. 3 Claims. (Cl. 296—109.)

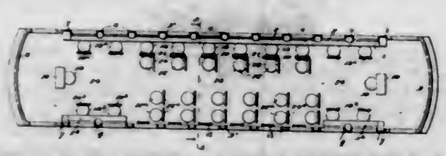


1. A folding hood for carriage-bodies comprising in combination a cover sheet, hoops supporting said sheet, carriages on said hoops, each carriage being provided with a screw-threaded bolt, a sleeve screwed on said bolt, said hoops having bores in their ends in which said sleeves are mounted and a rail to form a race for said carriage.

1,689,897. DOOR AND WINDOW CASING CONSTRUCTION. CLARENCE E. SEYMOUR, JOSEPH D. SEYMOUR, and PEARL C. DAVIS, Mansfield, Ohio. Filed Nov. 6, 1925. Serial No. 67,313. 1 Claim. (Cl. 20—92.)

In a joint for connecting the vertical and horizontal sections of a frame, the horizontal section having a rabbet extending from one end and disposed adjacent to the lower edge thereof said rabbet defining a rib and shoulder at one end of the rib, the rib being of a length of less than the length of the shoulder section, the vertical section having a rabbet formed across one end thereof defining a rib to be fitted in the rabbet of the shoulder section, the ribs adapted to interlock to secure the vertical and horizontal sections together.

1,689,898. VEHICLE TIRE RIM. JOEL SMITH, Jr., Byron, Okla. Filed June 13, 1927. Serial No. 198,602. 1 Claim. (Cl. 301—35.)



A securing device for a removable flange of a vehicle wheel rim, comprising levers pivotally connected to the rim, pins carried by the flange, links having one of their ends pivotally connected to the levers, the other ends of the links having openings therein for pivotally and detachably engaging the pins, and heads carried by the flange and movable into and out of locking engagement with the rim upon actuation of the levers.

1,689,899. SOLDERING. HENRY C. P. WEBER, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,217. 7 Claims. (Cl. 148—26.)

7. A solid fusible composition for soldering metals comprising a plurality of inorganic metallic halides to which ammonium chloride has been added to control the fusion temperature of the composition so that the metal halide will fuse below the melting point of the metal to be soldered, said metal halides being reduced to the metallic state by the metal to be soldered.

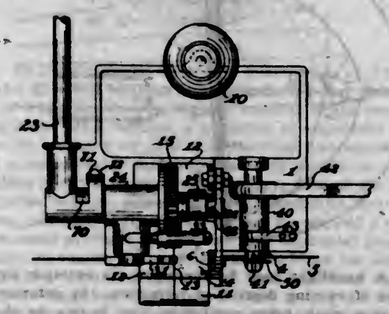
1,689,900. BUFFET OR BREAKFAST CAR. INEZ WILLIAMS, Washington, D. C. Filed June 28, 1928. Serial No. 288,893. 5 Claims. (Cl. 105—327.)

1. A breakfast car comprising, a shelf adjacent to one side wall thereof and extending lengthwise thereof, a row of chairs permanently facing and extending under said shelf dispensing means arranged above said shelf and at convenient points lengthwise thereof with respect to the respective chairs of said row of chairs, a corresponding row of chairs arranged in close proximity to the chairs of the first row and facing at right angles thereto, the corresponding chairs of the said rows being arranged in pairs in a direction at right angles to the longitudinal axis of the car, said pairs being spaced from each other as usual lengthwise of the car, in combination with a plurality of pairs of chairs disposed on the opposite side of the car, the chairs of each of said pairs being adapted to face endwise of the car, the pairs of chairs on one side of the car being staggered with relation to the pairs of chairs on the other side of the car, whereby the central aisle of the car may be narrower than usual to compensate for the space taken in a transverse direction by said shelf while permitting free passage of the passengers lengthwise of the car.

1,689,901. PROCESS TO DETERMINE THE ALCOHOL AND THE COLOR IN ALCOHOLIC LIQUIDS. JOHN F. WILLIAMS, Buffalo, N. Y., assignor of one-third to Carroll J. Roberts and one-fifteenth to Lucian C. Jackson, Buffalo, N. Y. Filed July 30, 1926. Serial No. 125,935. 9 Claims. (Cl. 23—230.)

9. A process for the purpose set forth, which consists of introducing a reagent having an amyl alcohol, a hydrocarbon of the aromatic series and an acid into an alcoholic liquid.

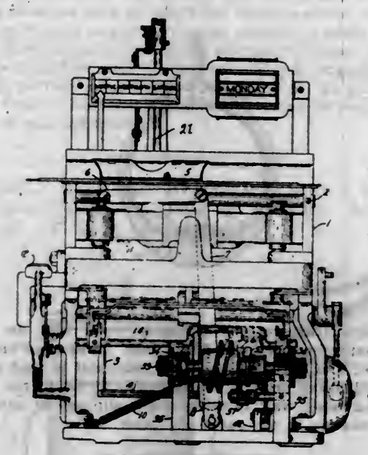
1,689,902. FORMULA FOR TEST REAGENTS TO DETERMINE THE ALCOHOL AND THE COLOR IN ALCOHOLIC LIQUIDS. JOHN F. WILLIAMS, Buffalo, N. Y., assignor of one-third to Carroll J. Roberts and one-fifteenth to Lucian C. Jackson, Buffalo, N. Y. Filed Aug. 2, 1926. Serial No. 126,738. 12 Claims. (Cl. 23—5.)



8. A test reagent for alcoholic liquids for the purpose set forth, including an amyl alcohol and a hydrocarbon of the aromatic series.

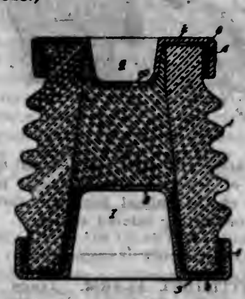
1,689,903. SNUBBER. SOLOMON WISE, Cleveland, Ohio. Filed Dec. 3, 1923. Serial No. 678,274. 16 Claims. (Cl. 267—9.)

1. A device of the character described, comprising telescoping members adapted for attachment to the axle and body frame respectively of a vehicle or the like, a stem carried by one of said members, means adapted for frictional binding engagement with the other of said members, and wedge means separate from the stem for automatically effecting operation of said frictional means so as to prevent rebound of the vehicle body.



1,689,904. BOX-STRAPPING TOOL. GEORGE WOOD, Seattle, Wash., assignor, by mesne assignments, to The Gerrard Company, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Jan. 22, 1920. Serial No. 353,309. 13 Claims. (Cl. 140—93.)

1. A wire hoop forming device comprising a wire end clamp, a bar alongside of said wire clamp having a wire receiving notch adapted to prevent two wires placed therein from twisting, a like holding bar separated from the first and also forming one blade of a wire cutter, a complemental wire cutting blade having a cutting edge adapted to engage and cut only one of two wires placed in the notch of the holding bar, and a twister engaging the wires between said holding bars.



1,689,905. TIME RECORDER. JAMES W. YATES, Cincinnati, Ohio, assignor to The Cincinnati Time Recorder Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 3, 1923. Serial No. 610,521. 6 Claims. (Cl. 234—48.)

1. A device for shifting a card tray in time recorders laterally for day to day changes in position comprising a lever connected at one end to the card tray, and at the other to a fixed point, a projection on the lever, a spiral cam adapted to receive said projection and means for

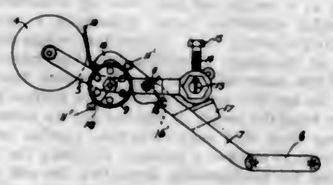
operating said cam driven by the time movement of the recorder, and a spring resisting the cam impelled movement of the tray.

1,689,906. INSULATOR. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 23, 1920. Serial No. 368,138. 8 Claims. (Cl. 173—318.)

1. An insulator unit comprising a dielectric column and metal terminal members therefor, one of which is constructed as a single integral piece of substantially uniformly-thick sheet-like metal embodying a central mechanically-anchoring and electrostatic-stress-distributing portion of cup-shape extending into the column having a transverse inner-end wall and a rounded inner-end perimeter, an annular end supporting-base portion projecting laterally from the mouth of the cup and an annular flange projecting from said supporting-base portion toward the other terminal member a distance less than the inner end of the cup for mechanically protecting the end of the dielectric column, assisting in controlling the electrostatic field of the insulator and constituting attaching means.

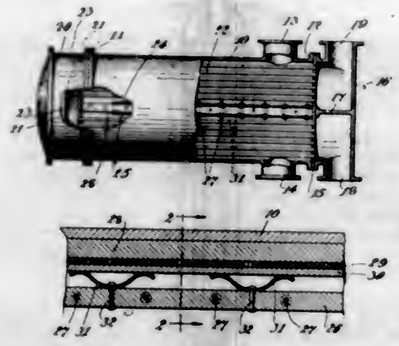
4. An insulator comprising ceramic dielectric and metallic terminal elements providing a substantially entirely-enclosed space, and a dielectric filler material capable of flowing and having a dielectric strength greater than air substantially entirely filling said space, one of said elements having a relatively small breathing opening for said filler material.

1,689,907. PUNCTURE-SEALING INNER TUBE. SHERMAN T. ALLEN, Los Angeles, Calif. Filed Mar. 14, 1928. Serial No. 261,617. 1 Claim. (Cl. 152—13.)



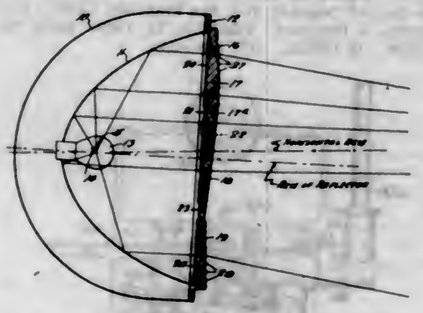
A pneumatic tire tube having an outer wall, an inner wall connecting portions of said tube, forming an annular chamber, and a rubber-like filling material in said chamber, said filling material being non-adherent to the outer wall and inner wall to allow slight slippage of said material relative to the outer and inner walls.

1,689,908. FUR SCARF. GEORGE J. BARUCH, New York, N. Y., assignor to Kaufman & Oberleder, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 8, 1928. Serial No. 252,708. 4 Claims (Cl. 41—10.)



1. In combination with a fur scarf animal head, an ornamental fabric of jewels secured thereto, in which the main features of the animal head are formed and accentuated by contrasting colored stones.

1,689,909. ANTITHEFT ALARM. JAKOB BREIDT, Port Washington, N. Y. Filed Aug. 12, 1927. Serial No. 212,369. 2 Claims. (Cl. 116—33.)

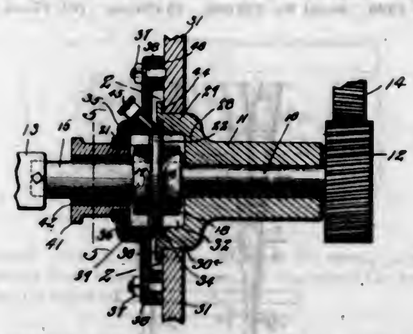


1. An anti-theft alarm for the wheels of a vehicle, comprising a bracket, a pair of arms pivoted to said bracket, a bell carried by said arms, positive mechanical means to lock said arms in operative and inoperative position, a shaft rotatable in said arms, a pair of hammers on said shaft, and a roller on said shaft frictionally engageable with the vehicle wheels to operate said hammers.

1,689,910. HEAT EXCHANGER. ARTHUR P. BROCKLEBANK, Elizabeth, N. J., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 5, 1927. Serial No. 231,204. 8 Claims. (Cl. 257—239.)

1. In a heat exchange apparatus, a shell, tube plates, tubes extending between the tube plates, a baffle extending longitudinally of the shell and dividing the same into compartments, a packing at the longitudinal edge of the baffle, and means for positively forcing the packing to position to make a substantially tight joint between the shell and the baffle.

1,689,911. LENS FOR AUTOMOBILE HEADLIGHTS. BERLIN A. BROUGHTON, Cleveland Heights, Ohio, assignor to Delta Engineering Laboratories, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 10, 1925 Serial No. 68,078. 2 Claims. (Cl. 240—48.4.)



1. A headlight lens having upon its exterior surface prisms of varying degrees of refraction, the exterior surface as a whole being continuous and having no sharply defined edges, the prisms at the top of the lens providing the greatest downward refraction, the prism at the center of the lens giving the greatest upward refraction, there being intermediate prisms between the prisms giving the greatest downward and the greatest upward refraction, the prism at the bottom also giving downward refraction.

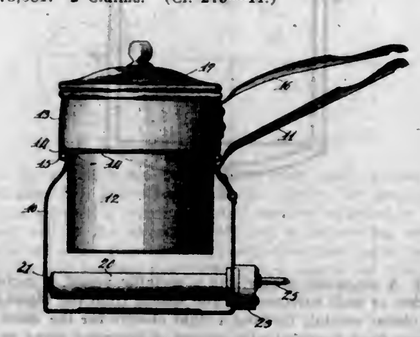
1,689,912. BEARING AND SEAL FOR SAME. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 25, 1924. Serial No. 695,031. 11 Claims. (Cl. 286—7.)

1. A seal comprising in combination with a casing to be sealed a sectional shaft, oppositely disposed convex members fixed to said shaft sections, a plate loosely arranged on said shaft between said convex members, and secured in sealed relation with said casing and concave mem-

bers interposed between said plate and said convex members, each of said concave members having a flat side

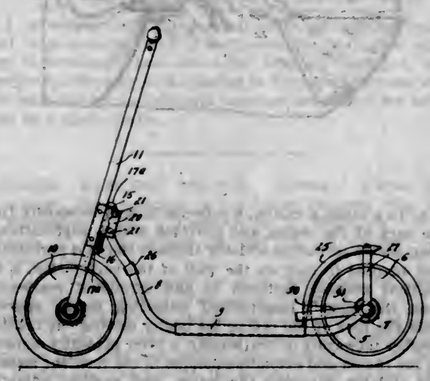
for engaging the respective face of said plate and a concave seat for receiving the convex face of the corresponding member.

1,689,913. MULTIPLE FLYWHEEL. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 18, 1925. Serial No. 57,138. 5 Claims. (Cl. 192—105.)



1. In a multiple fly wheel, the combination of a pair of coaxial fly wheel sections of substantially equal diameters, one of which is provided with an annular flange presented toward the other section, a plurality of segmental pieces movably mounted on said other section and enclosed by said annular flange and provided with peripheral convex portions adapted to engage the concave face of the flange of the first section, said pieces being operable by centrifugal action, coil springs for retracting said pieces, and a retaining member pivotally mounted on each segmental piece and adapted to engage the opposite piece and lock the latter in retracted position, said retaining members being operable by centrifugal action to release said pieces at a speed greater than that required to operate said segmental pieces to insure proper operative engagement of the latter with said annular flange.

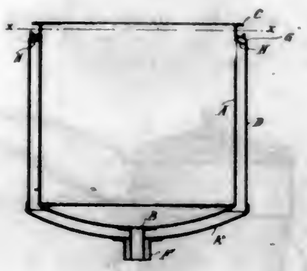
1,689,914. FISHING REEL. FRANCIS M. CASE, Cleveland Heights, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed June 26, 1924. Serial No. 722,524. 1 Claim. (Cl. 242—84.6.)



In a fishing reel, an end head, a click spring mounted thereon, said spring having a base plate portion and a click spring portion, said plate portion having its lower surface in engagement with said end head and having a plurality of side edges and said spring portion being integrally connected to one of said side edges, said end head being provided with an abutment member raised from the surface thereof and engaging the other side edges of said plate portion and with another abutment member, opposed to the said first named abutment member, engaging said spring portion adjacent its securement to the plate portion, whereby said click spring is maintained in proper position on said end head.

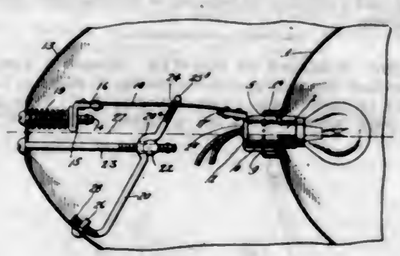
1,689,915. ELECTRIC HEATING VESSEL. CHARLES ENDORF, Chicago, Ill. Filed Dec. 16, 1925. Serial No. 75,681. 2 Claims. (Cl. 219—44.)

1. In an electric heating vessel, the combination with a container, of a tubular member adapted to extend diametrically of the container on the interior thereof, means for detachably clamping the tubular member to the wall of the container with an open end of the said tubular member accessible from the exterior of the container, said means comprising a washer or nut in screw threaded engagement with the tubular member, an electric heating element slidably and detachably carried within the tubular member, means for attaching the electric heating element comprising a cap secured to one end of the electric heating element, a screw adapted to pass through an opening in the cap and having screw threaded engagement with the said washer or nut, and a plurality of terminal or binding posts carried by the cap.



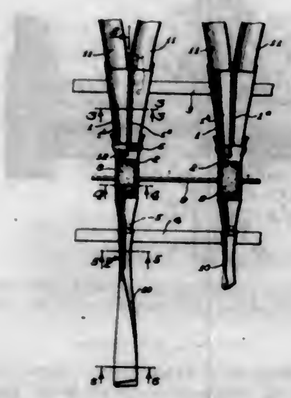
1,689,916. SCOOTER OR COASTER. ROBERT E. FISHER, Cleveland, Ohio, assignor to The George H. Bowman Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 28, 1924. Serial No. 734,739. 8 Claims. (Cl. 280—87.5.)

1. A scooter or coaster, comprising a pair of spaced frame members, front and rear supporting wheels therefor,



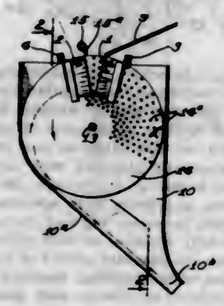
and a metal platform mounted on said frame members and having its side edge portions bent around said members so as to provide an interlocking connection therebetween.

1,689,917. CONTAINER. ELLIOTT E. GEISINGER, Rochester, N. Y., assignor to The Pfaudler Co., Rochester, N. Y., a Corporation of New York. Filed Sept. 25, 1922. Serial No. 590,304. 3 Claims. (Cl. 257—212.)



1. A container comprising a metallic vessel, a metallic jacket or shell surrounding and spaced from the vessel and a tubular conduit forming a tight closure for the space between them provided with groups of diverging spray or jet apertures directed toward the vessel and an aperture and a closure therefor opposite each group of jet apertures for permitting access thereto from the exterior.

1,689,918. FOCUSING ADJUSTMENT DEVICE. CHARLES E. GODLEY, Ypsilanti, Mich., assignor, by mesne assignments, to C. M. Hall Lamp Company, a Corporation of Michigan. Filed Sept. 16, 1926. Serial No. 135,972. 8 Claims. (Cl. 240—44.)

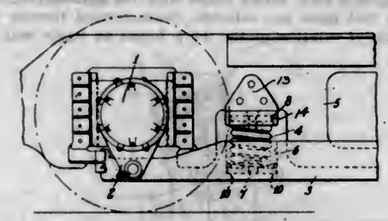


1. In a lamp, a casing, a reflector spaced forwardly from the back of the casing and provided with a perforation, a lamp socket extending slidably through the said perforation and adapted to rock on the wall of the perforation, a flat resilient member fastened to and extending rearwardly from the socket, longitudinal adjusting means operable from the rear of the casing for bodily moving the resilient member forwardly or rearwardly, a lever pivotally mounted on the casing and extending oblique to the resilient member and slidably engaging the latter, and vertical adjusting means operable from outside the casing for rocking the lever about its said pivotal mounting.

1,689,919. FISH DIRECTING AND TURNING APPARATUS. FRANK HEATH, National City, Calif. Filed Dec. 7, 1926. Serial No. 153,056. 10 Claims. (Cl. 17—2.)

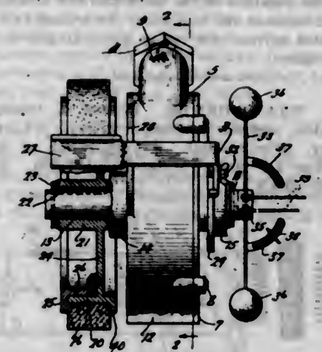
1. In a speed checking apparatus of the class described, an unobstructed fish directing chute adapted to receive fish on their normally flat sides, and a circular brush mounted on an axis transverse with the axis of the chute and extended with its bristles into the latter for engaging the upwardly turned normally flat side of a fish.

1,689,920. FISH-DIRECTING APPARATUS. FRANK HEATH, National City, Calif. Filed Dec. 7, 1926. Serial No. 153,057. 8 Claims. (Cl. 17—2.)



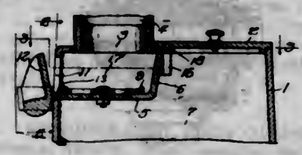
1. In an apparatus of the class described, a means for receiving individual fish pointed in different directions and for directing the same with the heads foremost, a chute, and movable means in connection with the first means and said chute adapted to be engaged by the heads of the fish from the first means for redirecting the same from the first means into said chute.

1,689,921. BOGIE FOR RAILWAY CARS AND THE LIKE. LARS GUSTAF HARRY HELMSTEIN, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Jan. 18, 1926, Serial No. 81,904, and in Sweden Jan. 21, 1925. 4 Claims. (Cl. 105—194.)



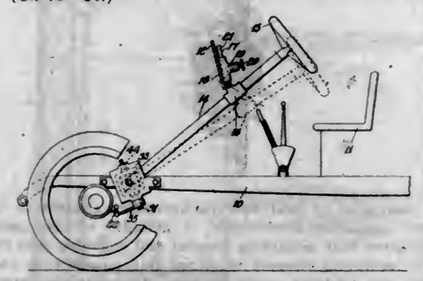
1. An improvement in trucks for railway cars and the like comprising a journal box, a beam supported by the

journal box, such beam having an upwarly directed socket for supporting a spring, the socket extending downwardly



entirely through the beam, whereby the spring may be inserted from below, and means for supporting the spring after its insertion.

1,689,922. GRINDING APPARATUS. DEAR TUNG HOY, Chicago, Ill. Filed Dec. 28, 1927. Serial No. 243,159. 3 Claims. (Cl. 51—166.)



1. A grinding apparatus comprising a casing, a fluid inlet stub in the upper portion of the casing, an outlet stub at the lower portion of the casing, a rotor actuated by fluid passing through said casing, a spindle to which said rotor is secured, one end of said spindle being extended beyond the casing, and a grinding stone mounted on the extended end of said spindle, the peripheral portion of said stone being positioned adjacent the outlet stub and there being a lateral orifice in the wall of the outlet stub on its side next the stone whereby a portion of the fluid passing through said stub is discharged on said stone.

1,689,923. BAFFLE FOR COAL-BURNING HEATERS. JACOB T. LANDGRAF, Macomb, Ill., assignor to American Steel Products Co., Macomb, Ill., a Corporation of Illinois. Filed Jan. 23, 1928. Serial No. 248,615. 9 Claims. (Cl. 126—58.)

1. A coal burning heater comprising a body having a fine aperture and a fuel aperture in its top, and a baffle member adapted to be removed through the fuel aperture; the baffle member having an upper end projecting through the fuel aperture and supported by the upper end of the heater body, the baffle also having a lower portion supported by the said body at the opposite side of the fine aperture from its upper end, the said upper ends of the baffle member and the heater body having coacting portions which interengage to prevent the baffle member from sliding within the heater body toward the fuel aperture.

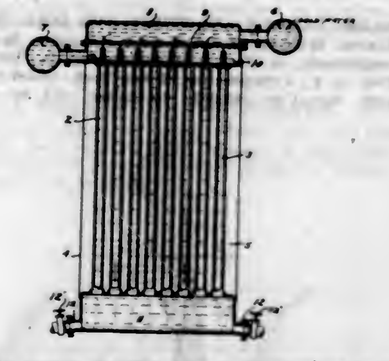
1,689,924. STEERING MECHANISM. EDWARD J. MALONEY, Long Island City, N. Y. Filed May 24, 1923, Serial No. 641,042. Renewed May 1, 1928. 2 Claims. (Cl. 74—80.)

2. In a vehicle: a swinging steering post; means to lock same to a fiifxed portion of the vehicle; the drag link of the vehicle; a double eccentric member mounted at the lower end of the steering post; and a cooperating member acted upon thereby in opposite directions upon turning the said steering post to provide a couple for rotating the cooperating member; and means connecting the drag link with said cooperating member.

1,689,925. TONGUE AND TEETH FOR DOLL HEADS. SAMUEL MARCUS, Brooklyn, N. Y., assignor, by mesne assignments, to Markon Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 21, 1926. Serial No. 143,031. 10 Claims. (Cl. 46—40.)

1. A tongue and teeth for doll heads, comprising tongue and teeth members one of said members having an opening therethrough and the other member having a part projecting through said opening in frictional contact with the wall thereof to hold said members assembled for handling as a single entity.

1,689,926. ELECTRIC SWITCH. GEORGE J. MEUER, Milwaukee, Wis., assignor to the Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 15, 1923. Serial No. 645,508. 6 Claims. (Cl. 200—163.)



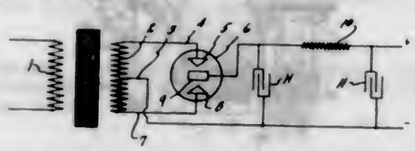
6. In a switch adapted for flush mounting, the combination with a metallic front plate having a slot and an insulating base having surface parallel to the front plate, a pair of spaced circuit terminals comprising elements penetrating said base and having their respective ends upset or riveted and exposed on the forward face of said base, a switching member comprising a pair of insulating elements respectively engaging the forward and rear faces

of said front plate, the forward insulating element being of substantially frusto-pyramidal shape and having a shank extending into the slot in said front plate, said shank having flat sides engaging the longitudinal walls of the slot to prevent rotation of said forward insulating element with respect to said front plate, said shank being also engageable selectively with the end walls of said slot to limit

the movement of said forward insulating element in opposite directions respectively, a metallic member penetrating the rear insulating element and engaging said forward insulating element to clamp said elements to each other, and bridging contactor for said terminals carried by said metallic member and having a spring bias whereby said contactor exerts pressure on said terminals when in engagement therewith.

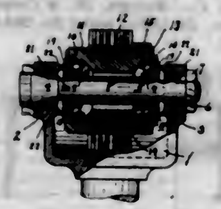
1,689,927. PROCESS OF AND APPARATUS FOR TRANSFERRING HEAT. RAY C. NEWHOUSE, Wauwatosa, Wis. Filed Dec. 14, 1923. Serial No. 680,578. 6 Claims. (Cl. 257—254.)

1. The process of utilizing gases of combustion to heat fluid having an initial temperature below the dew point temperature of the gases, which comprises, producing a stream of the fluid having oppositely flowing adjacent portions at least one of which has gradually decreasing velocity, initially raising the temperature of one of said stream portions to at least the dew point temperature of the gases by transfer of heat from said gases through the other of said stream portions, and subsequently heating the fluid from said initially heated stream portion by direct transmission of heat from said gases.



1,689,928. METHOD OF AND MEANS FOR FORMING OR WORKING SPHERICAL SURFACES, CONCAVE OR CONVEX. NILS JOSEF OLSSON, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Feb. 25, 1926, Serial No. 90,453, and in Sweden Mar. 5, 1925. 4 Claims. (Cl. 51—90.)

1. Procedure for the shaping of spherical surfaces by means of three simultaneous, continuous rotations, viz the rotation of the work around an axis through the centre of the spherical surface, the rotation of the tool around its own symmetrical axis and the revolving of this latter axis around a second axis through the centre of the spherical surface with which latter axis the symmetrical axis of the tool must not coincide, characterized thereby that the axis of rotation of the work forms an angle with the

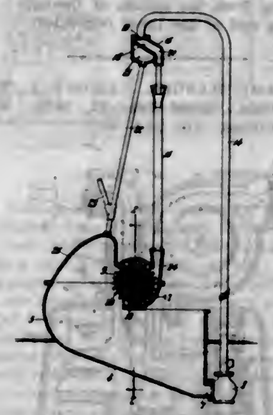


second axis through the centre of the spherical surface around which the symmetrical axis of the tool revolves and that the rotation of the work and the rotation of the symmetrical axis of the tool about the second axis through the spherical surface are taking place at speeds differing from each other.

1,689,929. TRANSFORMER. ROBERT L. OSBORNE, Detroit, Mich., assignor to Dougan Electric Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 19, 1926. Serial No. 117,080. 5 Claims. (Cl. 175—365.)

1. A transformer comprising a core, a primary winding on the said core, a shield winding consisting of a single layer wound about the primary, one end of the shield winding being free and the opposite end being grounded, a secondary winding about the shield winding consisting of two layer wound coils positioned in reverse relation about the shield winding, the inner layers of the two coils being electrically connected, and the outer layers of the two coils being provided with output terminals as and for the purpose described.

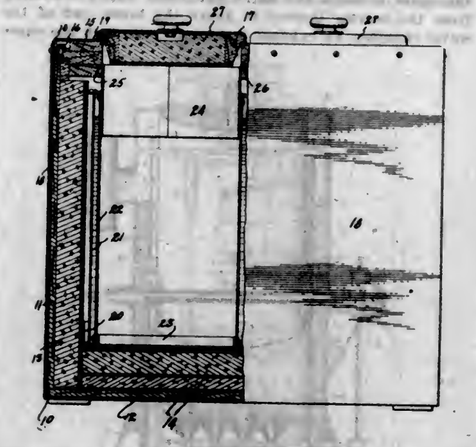
1,689,930. EMERY-WHEEL DRESSER. ROLAND P. PLACE, Midland, Mich. Filed Feb. 9, 1925. Serial No. 7,804. 1 Claim. (Cl. 125—37.)



In an emery wheel dresser, the combination of a holder having side members, a shaft mounted in said side members, a cutter mounted on the shaft, ball bearings between the shaft and cutter, washers on the shaft contacting with the inner ring members of said bearings, and cup shaped resilient metal washers between said washers and the side members of the holder to automatically adjust said ball bearings.

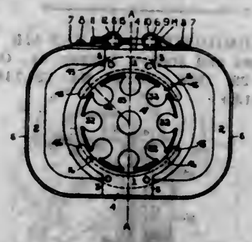
1,689,931. HOOD CATCH. ROLAND P. PLACE, Midland, Mich. Filed Feb. 4, 1926. Serial No. 85,890. 3 Claims. (Cl. 292—114.)

1. A hood door latch of the class described comprising a spring arm having a door engaging block at its upper end, and the lower end of which is pivotally connected with a fixed support; a stem fixedly secured to said arm adjacent the lower end thereof and extending upwardly from said lower end alongside said arm; and a spring actuated hold-down member carried by said stem and movable longitudinally thereupon and having a hook adapted to engage a fixed abutment carried by a hood door.



1,689,932. PULP BEATER. LEONARD E. RANDECKER, Erie, Pa., assignor to Hammermill Paper Company, Erie, Pa., a Corporation of Pennsylvania. Filed Feb. 10, 1927. Serial No. 167,101. 13 Claims. (Cl. 92—25.)

1. In a pulp beater, a tub, a beater roll, a bed plate cooperatively associated with the roll, an elevated receptacle, a feed pipe leading downwardly from the elevated receptacle to the roll, and means distinct from the roll for elevating pulp from the tub to the receptacle whereby the pulp will be fed to the roll with a substantial velocity due to gravity.

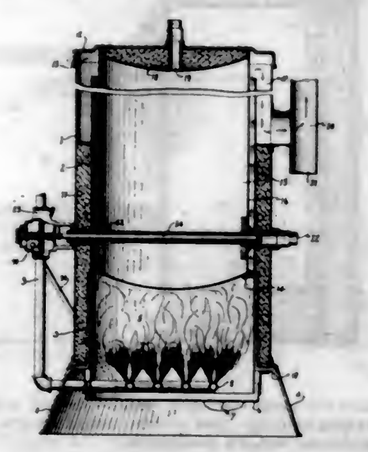


1,689,933. REFRIGERATED FOOD CABINET. JOHN R. REPLOGLE, Detroit, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Nov. 9, 1923, Serial No. 673,678, and in Canada Aug. 30, 1923. Divided and this application filed Aug. 26, 1926. Serial No. 131,568. 5 Claims. (Cl. 217—7.)

1. In a refrigerated food cabinet, the combination of a heat insulated chamber having an apertured top wall formed of material of low heat conductivity, a brine tank within said chamber having open food storage compartments in alignment with the apertures through said top wall, and annular sleeves having a flanged end adapted to be embedded in said top wall adjacent the apertures inter-

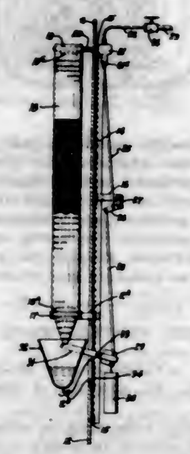
mediate the upper and lower surfaces thereof, said sleeves depending into the food storage compartments to form a continuous enclosed passageway.

1,689,934. ELECTRIC GENERATOR. GEORGE BERKELEY ROLFE, London, England, assignor to Eversbed & Vignoles, Limited, London, England. Filed Apr. 17, 1923, Serial No. 632,596, and in Great Britain May 17, 1922. 1 Claim. (Cl. 171—209.)



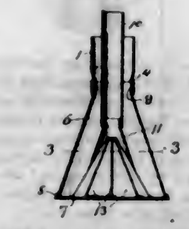
In a dynamo electric machine, a pole piece unit having in combination two laminated pole pieces, two locating rings of non-magnetizable material rigidly and permanently connected to said pole pieces, said rings each having a circular external perimeter, and armature bearing brackets having recessed portions cooperating with said circular perimeters for definitely locating the polar faces of the unit relative to the armature axis of the machine.

1,689,935. WATER HEATER. FRANK W. SHUELL, Detroit, Mich., assignor to The Ever Hot Heater Co., Detroit, Mich., a Corporation of Michigan. Filed Aug. 2, 1922. Serial No. 579,172. 2 Claims. (Cl. 122—19.)



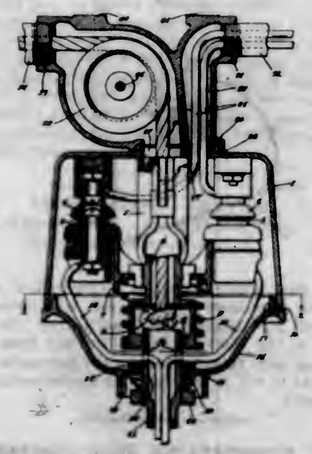
1. A water heater comprising an outer casing, an inner casing in spaced relation therewith, a base consisting of a cylindrical shell supporting the said inner and outer casings, a cylindrical shell providing a water chamber within the inner casing, the said water chamber shell being spaced from the inner casing and supported directly by the cylindrical base, the structure providing a combustion chamber below the water chamber and a space between the inner shell and water chamber opening directly to the combustion chamber, a cover member for the outer

casing, the inner casing terminating short of the cover providing for an egress of gases from the inner to the outer shells at the top, the upper end of the water chamber having a heat insulated cover, insulating material in the space between the outer and inner shells extending from the bottom thereof to above the lower end of the water chamber, an exhaust flue opening through the outer



shell just above the insulating material therebetween, said exhaust flue having an opening to atmosphere below the point of connection of the flue with the shell of a diameter practically equal to that of the flue, an outlet conduit for the water chamber at the top, an inlet conduit therefor near the bottom, and a thermostatically controlled heater member in the combustion chamber.

1,689,936. HUMIDIFIER FOR HOT-AIR FURNACES. JOSEF SUBERT and JOSEPH SUBERT, Jr., Oak Park, Ill. Filed July 22, 1926. Serial No. 124,148. 1 Claim. (Cl. 126—113.)

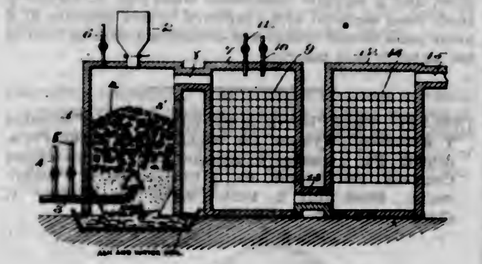


A humidifier for hot air furnaces having an outer casing, comprising a vertical tubular container having perforated sides and bottom and granular material within said container, means for mounting said container in an upright position within said outer casing, a water supply outlet at the upper end of said container for depositing water within said container and moistening said granular material, a valve for controlling the flow of water through said supply outlet, a movably mounted bucket located below and adjacent to the bottom of said container and adapted to receive the excess of water passing into and through said container and not retained by said granular material, and means interconnected with said valve and movably mounted bucket for automatically controlling the closing and opening of said valve and regulate the flow of water within said container and upon said granular material and in the bucket.

1,689,937. HEATING APPARATUS. JOSIAH H. SUTTER, Wichita, Kans. Filed Jan. 27, 1928. Serial No. 249,901. 4 Claims. (Cl. 126—70.)

1. In an air heater, two air conductors, one within the other and having its side walls spaced therefrom and having an open upper end and a downwardly flaring lower end having intake openings and resting against the bottom of the outer conductor, the latter having an open upper end and a closed flaring lower end adapted for insertion into a stove or furnace, and upwardly tapering radial plates extending from the bottom of the outer conductor into the flaring end of the inner conductor.

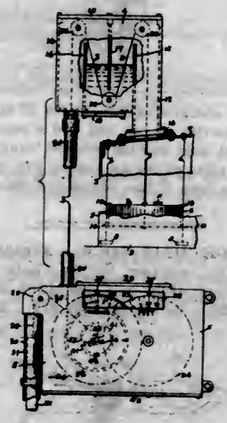
1,689,938. LAMP HANGER. ALLISON J. THOMPSON, Cleveland, Ohio. Filed Dec. 22, 1922. Serial No. 608,446. 4 Claims. (Cl. 240—66.)



1. A lamp hanger structure, comprising a main hanger member, a lamp hanger member, means for securing said members together, said main hanger member having a canopy member enclosing said securing means, an inverted canopy for closing said first named canopy against the entrance of foreign elements, said inverted canopy having a central aperture for the lamp hanger member, and a spring surrounding said lamp hanger member and engaging said inverted canopy so as to provide a yielding engagement therebetween.

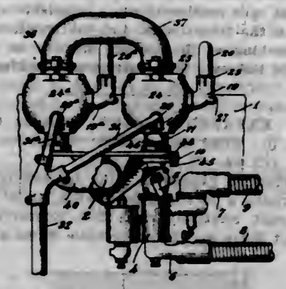
1,689,939. MOP. MATTHEW J. WELLING, Chicago, Ill., assignor to O-Cedar Corp'n, a Corporation of Illinois. Filed Apr. 13, 1927. Serial No. 183,282. 6 Claims. (Cl. 15—229.)

1. A mop comprising a mop head having a peripheral upturned edge, a mop swatch including a band having a free portion extending over said upturned edge to cover the same, and a clamping member engaging said free portion of the band below said edge to secure said swatch to said head.



1,689,940. PROCESS OF MAKING FUEL GAS. ALFRED H. WHITE, Ann Arbor, Mich. Filed Jan. 14, 1920. Serial No. 351,512. 8 Claims. (Cl. 48—205.)

1. The continuous process of making combustible gas with a heating value of over 200 British thermal units per cubic foot, which consists in substantially continuously blowing a charge of solid fuel within a gas generator with a gaseous mixture whose principal reactive constituents are oxygen, and steam in such proportions and so regulated in quantity that the fuel bed is continuously maintained at not less than a red heat and combustible gas is evolved, introducing enriching carbonaceous material derived from an external source into this hot gas capable of itself undergoing destructive distillation at a red heat and reacting with said hot gases to form gaseous hydrocarbons, and causing it to undergo destructive distillation and further interaction with the hot combustible gas out of contact with metallic surfaces and at temperatures which decrease slowly and are maintained principally by the energy resulting from the reactions in the fuel charge in the generator, whereby substantial destructive decomposition into free carbon of the hydrocarbons so formed is avoided.

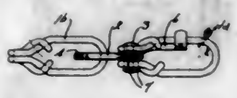


1,689,941. LIQUID-LEVEL INDICATOR. STEPHEN H. BROOKS, Cleveland, Ohio, assignor to The Oil Conservation Engineering Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 23, 1922. Serial No. 608,676. 2 Claims. (Cl. 73—82.)

1. In a liquid seal for tank gauges, the combination of a casing provided with two upwardly extending flanges mounted interiorly of the casing and extending to a height spaced below the top of said casing and forming a chamber to contain the sealing liquid, a partition wall attached to the casing top and extending into said chamber between said two flanges and into the sealing liquid, said casing having a hollow standard for tank attachment at one side of said liquid chamber, and having a second hollow portion on the other side of said liquid chamber for communi-

cation with an indicator, and cable guiding means mounted in said casing and adapted to guide a cable through said hollow standard and over one of said flanges into the liquid, below said partition wall and up through said liquid and over said other flange and down through said guide chamber.

1,689,942. SUPERHEAT SYSTEM FOR INTERNAL-COMBUSTION ENGINES. WILLIAM P. DEPPE, Brightwaters, N. Y. Filed Feb. 18, 1922. Serial No. 537,404. 11 Claims. (Cl. 123—122.)

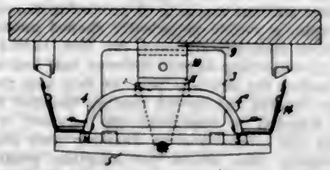


1. An apparatus for preparing a superheated homogeneous dry gaseous mixture for operating internal combustion engines, comprising a carburetor, a spherically shaped annular heating chamber connected with and adapted to receive mixture from the carburetor, means for heating said chamber to a temperature for vaporizing the fuel constituents without cracking or producing the spheroidal state therein, a second spherically shaped annular heating chamber mounted adjacent the first named heating chamber, a connecting conduit between said heating chambers to conduct the mixture from the first into the second, means for heating the second heating chamber to a temperature adapted to superheat the mixture, a conduit connecting the second heating chamber with the intakes of the engine, and means for injecting predetermined amounts of hot products of combustion into the fuel mixture passing through said connecting conduit between the heating chambers.

1,689,943. COMBINATION HOOK AND LOOP. HENRY D'OLIER, Jr., Bridgeport, Conn. Filed Oct. 12, 1925. Serial No. 61,879. 9 Claims. (Cl. 24—232.)

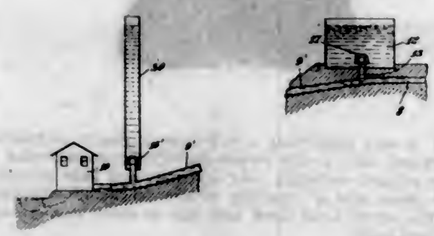
1. A support comprising two pieces of metal, each having a holding portion at one end and a supporting portion at the other end, said holding portion being in the form of a hook if two unlike pieces are placed side by side throughout and being a loop if like pieces are placed side by side throughout.

1,689,944. SIDE-CHAIN LOCK. ALFRED N. EDEBURN, Cleveland, Ohio, assignor to The Chain Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 14, 1926. Serial No. 115,977. 2 Claims. (Cl. 24—69.)



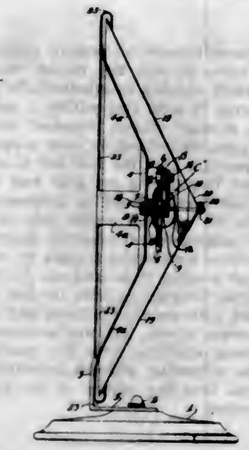
1. A tire side chain provided with fastening means at one end, said means including an end chain link of resilient material open at its ends and provided with two arms terminating in parallel and aligned eyes tending to move broadside into engagement by the resiliency of said arms, a pin passing through said eyes and provided with heads on its opposite end permitting separation thereof, and a hook-shaped locking member having a long arm provided with a laterally extending locking member and a return short arm pivoted on said pin between said eyes, the long arm being of such length that when said member is turned back into locking position said locking member engages with and latches around one of the arms in said end link, in which position said eyes resiliently press broadside against opposite faces of the return arm, and said resilient link arms requiring cocking of the locking member on said pin to separate said link eyes for releasing said locking member.

1,689,945. EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill. Filed May 3, 1926. Serial No. 106,561. 6 Claims. (Cl. 94—18.)



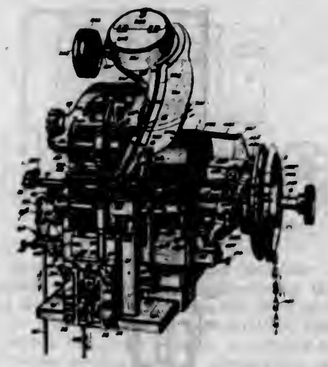
6. A preformed expansion joint for concrete construction, comprising a ductile, compressible binder in excess of sixty per cent, relatively rigid, flat, reinforcing elements composed of fibers and long vegetable fibres and long animal hair.

1,689,946. ELECTROMAGNETIC RELAY DEVICE. ALFRED ERNEST HUDD, Wallasey, England, assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill. Filed Oct. 31, 1925, Serial No. 65,981, and in Great Britain Aug. 22, 1925. 22 Claims. (Cl. 175—339.)



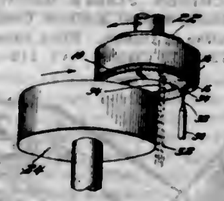
1. In an electromagnetic mechanism of the polarized type, an operating member adapted to take up two different positions and an armature adapted to operate always in the same direction irrespective of the direction of exciting current to bring about the movement of the operating member to either of its positions.

1,689,947. PRESSURE-CONTROL SYSTEM. RAYMOND D. JOHNSON, New York, N. Y. Filed Nov. 28, 1925. Serial No. 71,966. 2 Claims. (Cl. 61—19)



1. In a pressure control system the combination with a relatively elevated reservoir, of a pipe line supplied thereby and having an incline at its end portion, a surge tank connected to said pipe line adjacent the top of said incline, and a separate unenclosed stand-pipe of relatively small cross sectional area connected to said pipe line at a lower point of said incline and extending above the level of the water in said reservoir.

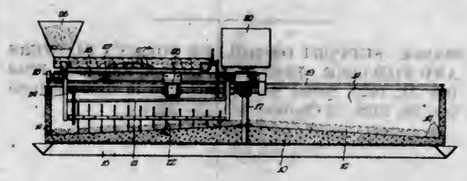
1,689,948. TELEPHONE MAGNET SYSTEM. RUSSELL T. KINGSFORD, Wyncote, and WILLIAM H. RICHTER, Philadelphia, Pa., assignors to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 2, 1925. Serial No. 41,031. 17 Claims. (Cl. 179—115.)



1. A telephone magnet system comprising a magnet frame, pole piece structure secured thereto at its one end and having at its other end a ground pole face, a vibratile armature bar secured adjacent its one end to said magnet frame and having its free end disposed adjacent and substantially parallel to said ground pole face, and a diaphragm of large area having small amplitude of vibration in unconfined air actuated by said vibratile armature bar.

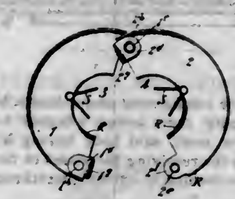
1,689,949. EYELETING MACHINE. WILLIAM F. LAUTENSCHLAGER, Cincinnati, Ohio, assignor to Lorenz Muther, Newton, Mass. Filed Aug. 5, 1921. Serial No. 490,099. Renewed Apr. 19, 1928. 57 Claims. (Cl. 218—15.)

1. In an eyelet machine, a tool carrying frame, a combined punching and setting tool, a setting tool opposing said first named tool, each mounted for reciprocation in said guide frame, the central axes of the said tools being in fixed alignment, means for reciprocating said tools at different speeds, and means for feeding said frame.



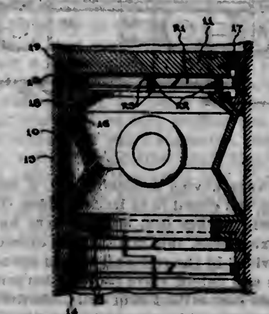
1,689,950. GRINDING MACHINE, GRINDING WHEEL, AND METHOD OF COOLING THE SAME. WALTER B. LEONARD, 2d, Providence, R. I., assignor to American Emery Wheel Works, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 6, 1927. Serial No. 217,822. 14 Claims. (Cl. 51—266.)

1. In a grinding machine, in combination, a rotating surface grinder comprising a cylindrical ring of substantial depth having a wall of inherently abrasive material having an annular grinding face on one end thereof and having enclosed pockets substantially elliptical in section extending part way across the annular grinding face thereof obliquely to the radial enclosed by the side wall thereof extending upwards a substantial distance within the wall thereof and terminating in rounded upper ends, means for moving work arcuately across a portion only of said rotating annular grinding face and means to project a stream of coolant substantially vertically upwardly into said pockets adjacent the point of departure of said grinding face from the work, whereby cooling pistons of coolant may be rammed into said pockets after the grinding face leaves the work and dropped out before said pockets again reach the work.



1,689,951. MANUFACTURE OF FERROUS HYDROXIDE. EMIL M. LOFLAND, Chicago, Ill. Filed Aug. 14, 1926. Serial No. 129,289. 22 Claims. (Cl. 23—200.)

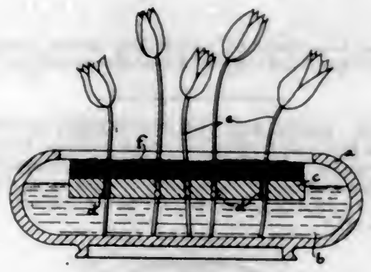
1. Process for the manufacture of an iron compound which comprises wetting fragments of iron, subjecting the wetted fragments to the action of oxygen for a period adequate to permit the formation of coatings of ferrous hydroxide on the fragments, and then removing and recovering the material of these coatings before it is converted to the ferric form.



14. An iron compound consisting of ferrous hydroxide preserved by an acid solution of a soluble salt of iron.

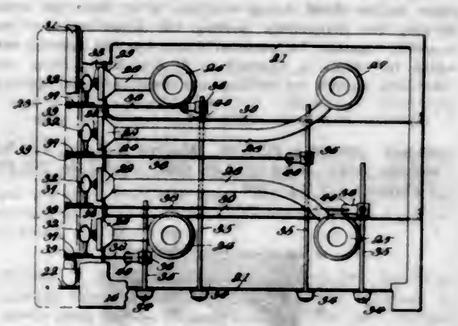
1,689,952. FLOOR AND CEILING PLATE FOR PIPES. LOUIS B. LOVEJOY, Bridgeport, Conn., assignor, by mesne assignments, to Clark Metal Products, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 1, 1926. Serial No. 99,050. 5 Claims. (Cl. 126—317.)

2. A device of the character described, comprising a pair of identically formed and interchangeable semi-circular members, each member having an opening at one end and a downwardly extending eyelet shank at the other, one of said eyelet shanks being permanently retained in the opening in the other member by being headed over, thereby securing those ends of the members pivotally together, the other eyelet shank being adapted to fit into the other opening for detachably holding the other ends of the members together, the member which has the opening into which the shank is adapted to fit detachably being provided with a guide for guiding said shank into said opening.



1,689,953. ENGINE PISTON. MARTIN H. LUTZ, Jr., Nelsonville, Ohio. Filed July 25, 1927. Serial No. 208,275. 3 Claims. (Cl. 74—108.)

1. A piston comprising a body portion, a head separate from the body portion, the piston and the head being formed with peripheral grooves having side walls disposed

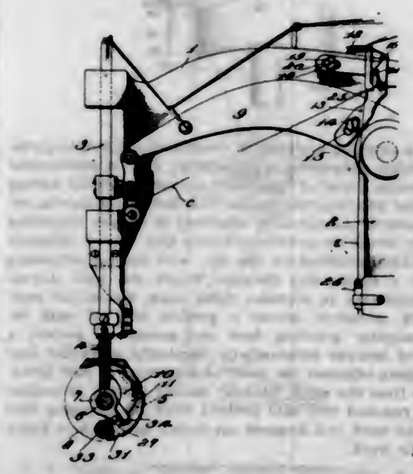


at acute angles to the axis of the piston, the wall in the head being at the opposite angle from that in the body portion, and a compression ring bounding the head and a part of the body portion and having lips conforming in shape to the shape of the grooves in the same.

1,689,954. SUPPORT OR HOLDER FOR CUT FLOWERS AND THE LIKE. LÉON MARX, London, England. Filed Oct. 31, 1927, Serial No. 229,908, and in Great Britain Dec. 30, 1926. 2 Claims. (Cl. 47—41.)

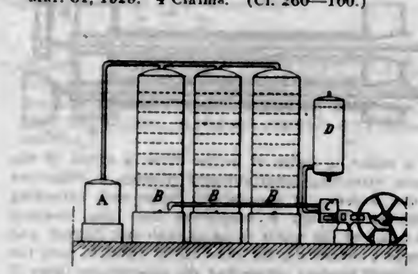
1. A support for cut flowers, comprising a body of material of less density than water, adapted to float in a water filled flower bowl, said body having a plurality of apertures therein for receiving the stems of flowers, whereby said stems are enabled to extend therethrough into said water.

1,689,955. GAS RANGE. BENJAMIN EDWARD MEACHAM, Lorain, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Feb. 2, 1928. Serial No. 251,338. 7 Claims. (Cl. 126—39.)



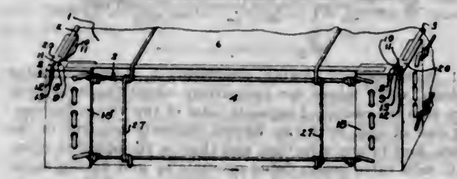
1. A gas range having a cooking top, a burner box beneath said top and closed in at its four sides, front and rear burners in said burner box, said burners having mixing tubes and mixing bells, said mixing bells extending through openings provided in the end wall of said burner box, a gas delivery pipe and cut-off valve for said burners at the end of said burner box beyond said bells, controlling handles for said valves rotatably mounted upon the front wall of said burner box and provided with elongated shafts extending into said burner box, and operative connection between said shafts and said cut-off valves, for the purpose described.

1,689,956. WELL PACKER. CHARLES R. MEEKER, Pittsburgh, Pa., assignor to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 11, 1925. Serial No. 68,322. 4 Claims. (Cl. 166—12.)



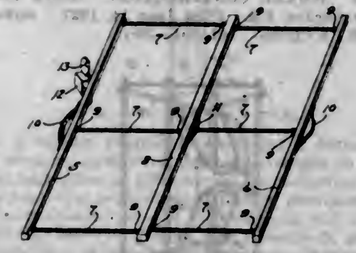
1. In a packer, a body, a cage loosely mounted on the body, a slip receiving opening in the cage, a slip mounted in the said opening, a spring member having a slot therein, means passed through the slot and movable therein for movably connecting the slip and spring member, and means for fixedly engaging the said member and cage.

1,689,957. THREAD-CONTROLLING MECHANISM FOR SEWING MACHINES. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 22, 1926. Serial No. 117,724. 12 Claims. (Cl. 112—249.)



1. In a sewing machine, the combination of a looper carrier, a looper mounted thereon, a thread controlling mechanism for said looper including a stationary cam member, and a movable member mounted on the looper carrier adjacent the looper and cooperating with said stationary member.

1,689,958. PROCESS OF MANUFACTURE OF CELLULOSE XANTHATE. PIERRE MORO, Marseille, France. Filed Mar. 18, 1926, Serial No. 95,670, and in France Mar. 31, 1925. 4 Claims. (Cl. 260—100.)

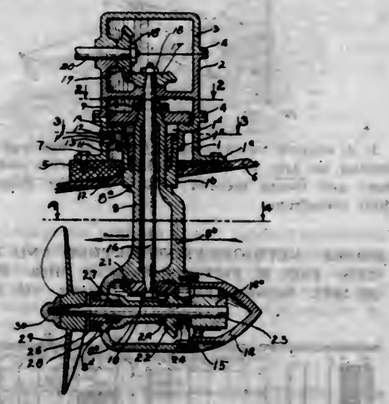


1. The process of manufacturing cellulose xanthate which consists in compressing alkali cellulose thereby to obtain less than 300 parts for each 100 parts of cellulose, reducing the product to very small particles, and mixing the same with a high-grade solution of sulphur in carbon bisulphide while heating it to a temperature of 30° to 40° C.

1,689,959. SHIPPING AND DISPLAY BOX. WILLIAM H. MOUNT, Summit, N. J. Original application filed Oct. 10, 1922, Serial No. 593,593. Divided and this application filed Nov. 24, 1925. Serial No. 71,060. 6 Claims. (Cl. 217—17.)

4. A new article of manufacture comprising a side or end of a knock-down box having metallic strengthening members at each end and a relatively weak intermediate member and means passing transversely through the strengthening member a plurality of times to fasten said members together and extending longitudinally thereof to connect the strengthening members.

1,689,960. MATTRESS CARRIER. EMMA NELSON, Minneapolis, Minn. Filed Nov. 2, 1927. Serial No. 230,485. 2 Claims. (Cl. 224—49.)

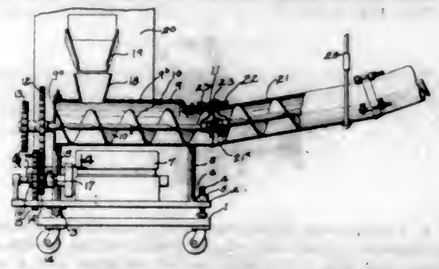


1. A mattress carrier comprising a pair of outer bars, an intermediate bar, coiled springs connecting the outer bars to the intermediate bars, and a latch for separably connecting the outer bars.

1,689,961. DISPENSING FAUCET. WILLIAM E. PATNAUDE, Stoughton, Mass., assignor to The Shallcross Company, Philadelphia, Pa., a Corporation of Delaware. Filed May 13, 1925. Serial No. 29,878. 3 Claims. (Cl. 251—134.)

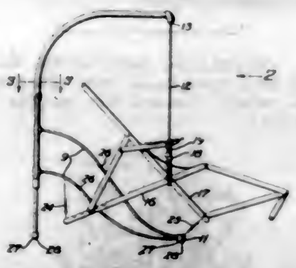
1. A self-closing dispensing faucet comprising a vertically disposed cylindrically-shaped casing having a side entrance pipe and a discharge port at its lower end, a vertically movable hollow valve stem having a valve at its lower end arranged to seat on the casing about the port, a guide spindle mounted in said casing and entering said hollow stem to guide the same, an operating lever having a shaft portion mounted in the wall of said pipe, said shaft portion having an arm extended at an angle thereto and engaged with said stem to lift the same when said lever is operated, and a closing spring surrounding said guide spindle and acting against the said casing and said stem to close the valve against its seat.

1,689,962. PROPELLING MECHANISM FOR BOATS. ELMER E. PECK, Long Beach, Calif. Filed Oct. 5, 1925, Serial No. 60,455. Renewed Sept. 10, 1928. 7 Claims. (Cl. 115—18.)



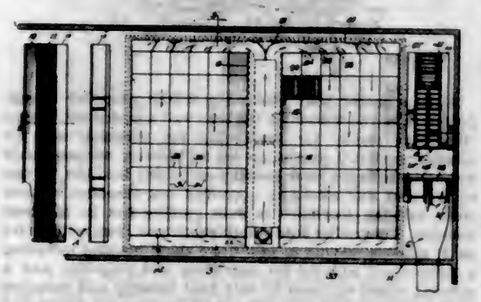
1. In a motor boat wherein a driven propeller is supported from the bottom of the boat and adapted for pulling the boat: means for supporting the propeller and its housing so that it may be moved for steering purposes, said means including a boat housing extending into the bottom of the boat and affording a stuffing box therefor, a drive shaft housing journaled in said stuffing box in the boat housing, a propeller and shaft supported from said drive shaft housing, means in said drive shaft housing including a drive shaft adapted for operating said propeller, and a steering wheel enclosed by said boat housing and mounted on the upper end of said drive shaft housing for supporting and turning it relative to said boat housing.

1,689,963. CONCRETE MIXER AND CONVEYER. BENJAMIN H. PELTON, Carlsbad, Calif., assignor to B. H. Pelton, jr., Casper, Wyo. Filed May 4, 1926. Serial No. 106,616. 4 Claims. (Cl. 198—213.)



1. In a means of the class described, a pair of conveyer casings adapted to be connected at various angles at one

of their ends, inwardly offset spider brackets mounted within and at the adjacent ends of said casings, conveyer screws revolubly mounted at one of their ends in said

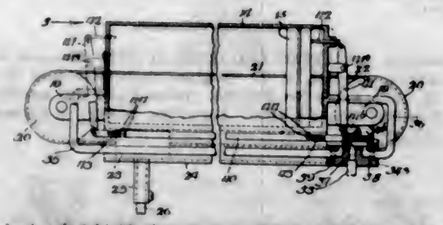


brackets, and universal joint means connecting the adjacent ends of said conveyer screws between the offset portions of said brackets.

1,689,964. STEAMER-DECK-CHAIR SUPPORT. GRACE G. PERREGO, San Francisco, Calif. Filed June 29, 1927. Serial No. 202,174. 12 Claims. (Cl. 114—194.)

1. A support comprising a frame having legs, and including an arm in vertical alignment with one of said legs; and means secured to said arm for suspending a chair therefrom.

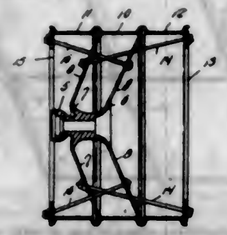
1,689,965. REFRIGERATING METHOD AND APPARATUS. PAUL W. PETERSEN, Bay City, Mich. Filed May 26, 1923. Serial No. 641,648. 14 Claims. (Cl. 62—137.)



1. Apparatus for refrigerating comestibles comprising a plurality of portable open top comestible containers for insertion into a body of refrigerating liquid, frame members having flanges for engaging each container and mounted over the body of liquid for carrying the weight of said containers while immersed in the liquid, and spaced means for holding the top edges of each container horizontally spaced from said frame members whereby refrigerant drip from others of said portable containers is prevented from draining into the open top of the container from said members.

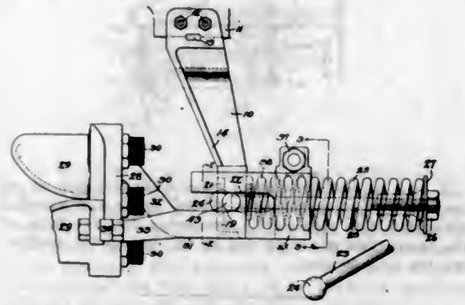
1,689,966. STEAM BOILER. UNITO PISI, Philadelphia, Pa. Filed May 6, 1926. Serial No. 107,250. 10 Claims. (Cl. 122—267.)

2. In a boiler, a series of water tubes, a series of fire tubes each extending longitudinally through a respective water tube, a series of superheater tubes each extending longitudinally through a respective fire tube, headers common to all of the water tubes at each end thereof, and other headers connecting the superheater tubes in sets, the last mentioned headers connecting the superheater tubes of each set in successive order.



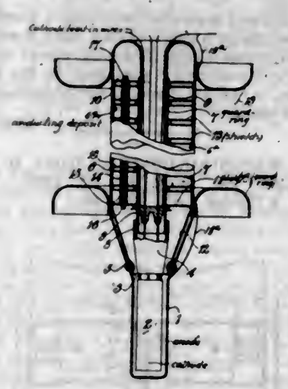
1,689,967. WINDSHIELD-WIPER ACTUATOR. THOMAS B. POLK, Seattle, Wash., assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y. Filed Jan. 26, 1924. Serial No. 688,892. 9 Claims. (Cl. 15—253.)

1. A windshield cleaner comprising a casing, a piston therein, valve means for operatively admitting fluid pressure into the casing at opposite sides of the piston for moving one of said first two named elements relative to the other, first in one direction, and then in the opposite direction, said valve means being operable by and during movement of the movable one of the first two named elements, a wiper operable back and forth by the movable one of said first two named elements, and means for adjusting the operative stroke of said movable element whereby the area cleaned by said wiper may be varied.



8. A windshield cleaner comprising a cylinder, a piston operable therein upon the application of fluid pressure to the piston within the cylinder, valve mechanism for operatively admitting fluid pressure to the cylinder, said cylinder having a lengthwise extending guide on its periphery, a wiper carrier slidable along the guide and supported thereby on the exterior of the cylinder, and means operatively connecting the carrier to the piston for being driven thereby.

1,689,968. WHEEL CONSTRUCTION. HOYLE POUNDS, Winter Garden, Fla. Filed June 14, 1927. Serial No. 198,749. 8 Claims. (Cl. 301—36.)

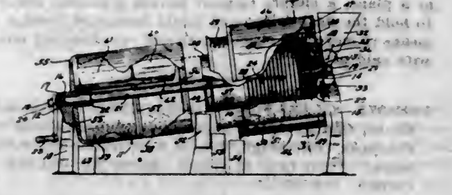


1. A wheel structure of the class described comprising a hub, spokes radiating from the hub, said spokes being disposed in series, a rim at the ends of the spokes, a pair of additional rims, a pair of rings for engaging the outer edges of the additional rims to hold them in concentric abutting relation with the first mentioned rim, and means engaging the rings with the spokes.

1,689,969. ADJUSTABLE TRAIN-PIPE CONNECTER. EDWARD A. ROBINSON, Montreal, Canada, assignor to himself and Ellison Edward Workman, Montreal, Canada. Filed Oct. 4, 1920. Serial No. 414,517. 17 Claims. (Cl. 285—24.)

1. In an automatic train connecter, a head, train pipe terminals carried thereby, a carrier rigidly mounted with respect to the head, a bracket adapted to be secured to a fixed car member, a buffer spring back of the bracket, a tie rod holding the buffer spring and a fastening rigid with the carrier and tightly engaging the spring to move with the spring.

1,689,970. VACUUM TUBE AND THE LIKE. ERNEST YEOMAN ROBINSON, Manchester, England, assignor to Metropolitan-Vickers Electrical Company Limited, London, England, a British Joint Stock Company. Filed Oct. 11, 1923, Serial No. 667,922, and in Great Britain Oct. 18, 1922. 8 Claims. (Cl. 250—27.5.)

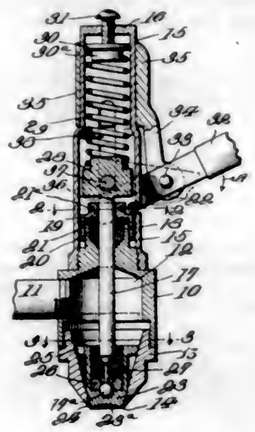


1. In a vacuum electric device having a hermetically sealed envelope, conducting members arranged to be operated at high potential difference for the production within the envelope of a predetermined electric phenomenon between predetermined parts of their surfaces, and a bridge of insulating material holding said members in position, said bridge being of sufficient length to prevent surface discharge across it, the space between said surface parts of the conducting members other than directly between said members being divided into a plurality of gaps in series which are individually of such short length as to prevent ionization in said space.

1,689,971. VACUUM ELECTRIC-TUBE DEVICE. ERNEST YEOMAN ROBINSON, Withington, Manchester, England, assignor to Metropolitan-Vickers Electrical Company Limited, a Company Organized under Laws of Great Britain. Filed June 27, 1924, Serial No. 722,810, and in Great Britain July 24, 1923. 5 Claims. (Cl. 250—27.)

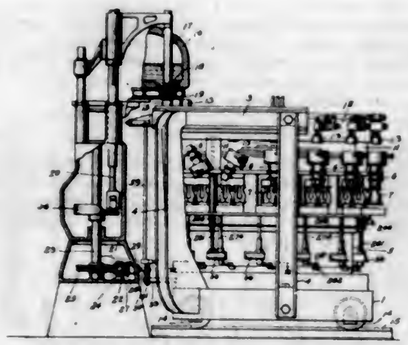
1. In a system which contains a vacuum electric tube with a filamentary cathode heated by alternating current and provided with end taps and at least one intermediate tap, the method of reducing the inequality in the distribution of heat along the filament due to the space current of the tube flowing therein which consists in leading in the space current to the filament at its end and intermediate taps while the filament is not short-circuited as regards its heating current and no appreciable impedance is offered to the space current.

1,689,972. GRAIN SEPARATOR. ANDREW E. ROTHGARN, Minneapolis, Minn., assignor to Samuel C. Clow, Minneapolis, Minn. Filed Apr. 12, 1926. Serial No. 101,363. 6 Claims. (Cl. 209—395.)



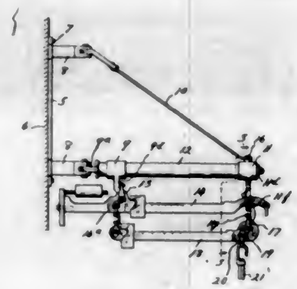
1. The combination with an axially inclined cylindrical separator for holding materials to be separated comprising annular grate bars, of cleaners between the grate bars, a cylindrical screen surrounding said separator, a cylindrical collecting drum surrounding the screen, and means for rotating the separator, screen and drum.

1,689,973. CUTTER FOR PLANING GEAR TEETH. OLE SEVERSON, Shelton, Conn., assignor to The O. K. Tool Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 20, 1924. Serial No. 757,197. 10 Claims. (Cl. 29—102.)



10. A gear cutter of the reciprocatory type comprising a body member formed with supporting teeth on the periphery thereof; cutter bits adapted to be supported on the forward faces of said teeth; interfitting formations on the adjoining surfaces; a ledge portion extending from said body member adjacent but spaced from the inner edge of each tooth to form openings therebetween; and wedging members adapted to adjustably engage in said openings for locking said cutter bits in position.

1,689,974. VALVE. HERBERT L. SHALLCROSS, Philadelphia, Pa. Filed Aug. 22, 1925. Serial No. 51,867. 8 Claims. (Cl. 251—162.)

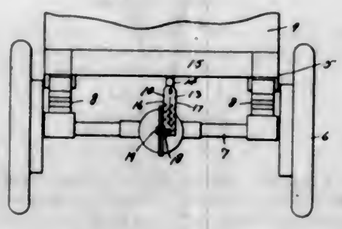


1. In a valve, a casing forming a liquid chamber which terminates at the bottom in a conical passage with an externally conical wall intersecting the conical passage wall in a plane, a closure element having a conical lower end to enter and seal said conical passage and in its sealed position to present its lower end substantially in said in a plane, a closure element having a conical lower end to hold the final delivery of liquid from said passage, and means to move said element into and out of sealing relation with said passage.

1,689,975. GLASS-FORMING MACHINE. THEODORE H. SLOAN, Charleroi, Pa., assignor to Macbeth-Evans Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 12, 1926. Serial No. 141,097. 26 Claims. (Cl. 49—5.)

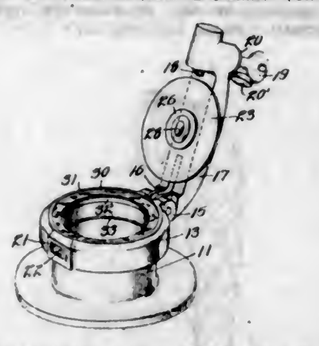
2. In a glass forming machine, the combination with a source of supply adapted to deliver glass, of a frame, a continuously rotating turret provided with a plurality of forming units continuously movable with it, a plurality of glass-receiving cups borne by said turret and movable with the turret each in registration with a forming unit, means borne by said frame for successively engaging and holding each of said cups stationary at the delivery staton to receive glass, and means borne by the turret for subsequently causing each cup to move with the turret in registration with a succeeding forming unit.

1,689,976. BEAM SCALE. WALTER F. STIMPSON, Louisville, Ky. Filed Nov. 18, 1927. Serial No. 234,118. 6 Claims. (Cl. 265—49.)



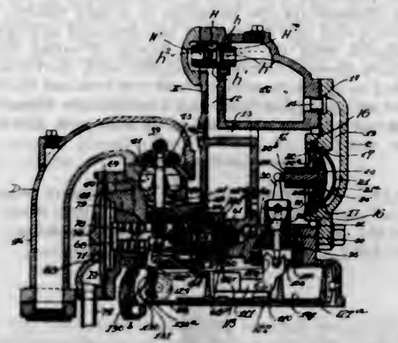
1. In a support for a beam scale, a sleeve, a pair of cap castings encircling the ends of the sleeve and provided with shoulders respectively contacting the end faces of the sleeve, and means carried by the castings for suspending the scale beams.

1,689,977. GARMENT SUPPORTER. DAVID M. STIRTON, San Francisco, Calif. Filed Feb. 6, 1925. Serial No. 7,296. 3 Claims. (Cl. 24—168.)



2. In a garment supporter including a supporting web, a buckle comprising a plate having slots therein through which the web passes, and fastening means for the fixed end of the web comprising a member on the back of the plate having a bulged portion for clamping said web against said plate.

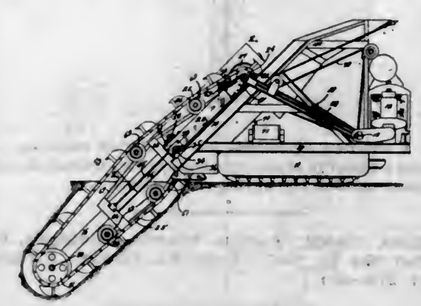
1,689,978. WEIGHING DEVICE. HARRY M. SWARTLEY, Philadelphia, Pa. Filed Feb. 2, 1927. Serial No. 165,351. 2 Claims. (Cl. 265—40.)



1. In combination with a vehicle including a body and axle, a bracket secured to the under side of the body, an adjustable scale plate vertically mounted on said bracket and having two different scales thereon side by side in permanent relation, and a pointer secured to the axle for simultaneously indicating the weights represented on both scales.

1,689,979. GAS-TANK CAP. HOMER E. TATE, JAMES E. KING, and HERBERT BARBER, Ashland, Ky. Filed Feb. 14, 1928. Serial No. 254,310. 2 Claims. (Cl. 70—90.)

1. A cap for a gas tank comprising a hollow body, an arm pivoted to said body and extending across the same, a depression beneath the free end of said arm, a locking bolt carried by said arm for engagement with said depression, a set screw extending through said body and having its head located in said depression whereby the locking bolt will conceal said head, and a lid for said body resiliently carried by said arm, substantially as set forth.

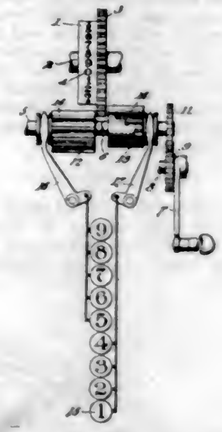


1,689,980. DRY-PIPE SPRINKLER-SYSTEM ACCELERATOR. EMIL TYDEN, Evanston, Ill. Filed Feb. 15, 1926. Serial No. 88,167. 13 Claims. (Cl. 169—22.)

1. In a dry pipe sprinkler system, in combination with a valve casing and a water-controlling valve therein, adapted to be held seated against the water pressure by the air pressure in the system, a device comprising means caused to operate for producing movement upon limited decline of pressure in the air pressure region of the system; a movable part caused to be moved by said means; an atmosphere vent port and a conduit leading thereto from the air pressure region of the system; a valve controlling said port positioned for being normally held seated by the pressure in the air pressure region of the system, and operative connections from said movable part for opening said valve against the air pressure of the system; means for automatically locking said valve at open position, and means operated by the water pressure, admitted as the result of venting the air pressure, for automatically releasing the locking means to cause said valve to be closed by the pressure resulting in the air pressure region, from the admission of the water pressure.

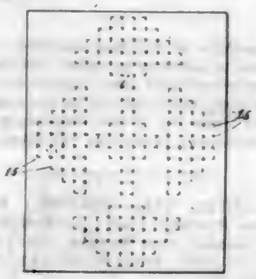
13. In combination with a dry pipe sprinkler system, an accelerating device for hastening reduction of pressure in the air pressure region of the system having a passage for communication with said region and adapted to be set in operation by decline of pressure in said region, the system comprising a conduit connected with said air pressure region for freely venting the pressure therein to the atmosphere; a vent valve controlling said conduit, said accelerating device comprising a chamber to which the pressure from the air pressure region has access, a movable part mounted for movement in response to change in said pressure reaching said chamber, and mechanical connections from said movable part for causing the opening of said atmosphere vent valve, said connections comprising a part extending from within said chamber and protruding airtight out through the wall thereof, and other parts exterior to said chamber brought into operation for opening said atmosphere vent valve by said protruding part, said exterior parts being accessible for manipulation both for reacting on said interior part and for causing the opening of said atmosphere vent valve.

1,689,981. LATERALLY-ADJUSTABLE EXCAVATOR-BOOM STRUCTURE. GEORGE A. VAUGHN, Newton, Iowa, assignor to The Parsons Company, Newton, Iowa. Filed Sept. 30, 1926. Serial No. 138,645. 21 Claims. (Cl. 37—90.)



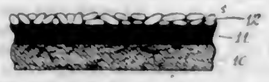
11. In a machine of the class described, a main frame, a second frame mounted to be raised and lowered thereon by a movement wherein the lower end travels in an inclined plane and the upper end travels in an arc, a boom supported on the second frame for lateral adjustment thereon, and excavating mechanism carried by the boom.

1,689,982. LEVEL VIAL HOLDER. PAUL HERMAN VOGEL, New Hartford, Conn., assignor to The Chapin-Stephens Company, Pine Meadow, Conn., a Corporation. Filed Mar. 31, 1927. Serial No. 179,774. 2 Claims. (Cl. 33—211.)



1. In a level, a stock of wood provided with an elongated opening for level vials and having at the inner peripheral surface of the ends of said opening a supporting web, said web having faces on the opposite sides that serve as seats, a pair of plates, each in the form of a border for said opening, positioned one on each side of said stock, and having extensions at the ends that are opposed respectively to said seats, bolts projected through said web and engaged with said extensions for holding said plates, said plates being provided with integral lugs for supporting level vials, said extension in each case covering only a portion of the adjacent seat to which it is opposed, the extension of the plate on one side being generally on the oppsite side of the longitudinal axial plane relatively to the extension of the plate on the opposite side, whereby unobstructed portions of said seats are available for use of the holding bolts.

1,689,983. SELECTIVE GEAR TRANSMISSION FOR CALCULATING MACHINES. EDWARD CLAXTON WALTER, Orange, N. J., assignor to The Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 21, 1925. Serial No. 24,770. 12 Claims. (Cl. 235—82.)

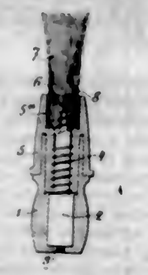


1. A selecting mechanism for calculating machines, including a plurality of selecting members for a single denominational position and having parallel axes.

1,689,984. GAME. RAPHAEL WALTON, Philadelphia, Pa. Filed May 20, 1927. Serial No. 192,949. 1 Claim. (Cl. 273—30.)

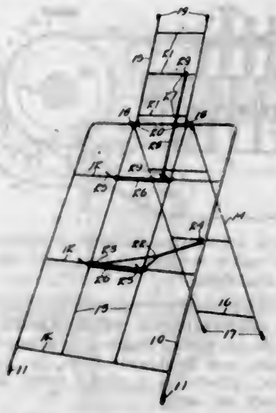
In a game of the character described, a series of indications for starting the drawing of lines to form squares, said indications being arranged in predetermined configurations, each indication consisting of two lines for determining the direction in which the enclosing lines are to be drawn.

1,689,985. READY ROOFING. HENRY R. WARDELL, New York, N. Y., assignor to Johns-Manville, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 23, 1921. Serial No. 517,258. 6 Claims. (Cl. 154—51.)



1. Prepared roofing of laminated structure comprising a sheet composed of a mixture of asbestos fibre and cattle hair impregnated with an asphaltic waterproofing compound, a layer of adhesive asphalt covering the said sheet upon one side of the same, and a layer of grit adhering to and covering the said adhesive asphalt layer.

1,689,986. AMPLIFYING ATTACHMENT FOR HORNS OF SOUND-REPRODUCING INSTRUMENTS. WILSON E. WEATHERLY, Chicago, Ill., assignor to Austin G. Bland, Riverton, W. Va. Filed Oct. 13, 1926. Serial No. 141,351. 1 Claim. (Cl. 181—27.)



An attachment for lengthening the volume of air included within an amplifying horn comprising a base having a chamber for the reception of a loud speaker unit therein, a stub tube rising from said base and having communication with the chamber therein, a casing having apertures therein, collars surrounding said apertures and adapted to receive respectively said stub tube and the small end of an amplifying horn, and a coiled tube within said casing having communication at its ends with said apertures.

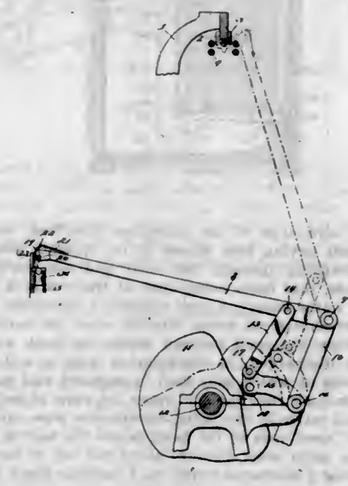
1,689,987. SHAVING BRUSH. JEAN-MARIE WERNER, Montbeliard, France. Filed Jan. 31, 1927, Serial No. 164,916, and in France Feb. 27, 1926. 2 Claims. (Cl. 15—194.)

1. A shaving brush-holder comprising a handle, a sleeve upon said handle, the said sleeve being adapted for the insertion of the base portion of a bundle of bound up bristles and a tapered spindle secured to the said handle and adapted to enter into the said bundle of bristles, the said sleeve comprising a cylindrical extension which is internally provided with a screw thread, the tapered surface of the said spindle being provided with a screw thread and said spindle comprising a screw threaded cylindrical extension which is adapted to be screwed into the extension of the said sleeve, the pitch of the screw thread of the said extension being the same as that of the one on the tapered portion of said spindle.

1,689,988. FLORAL RACK. CLARENCE J. WHITE, Peoria, Ill., assignor, by mesne assignments, to Heinz Floral Rack Co., Chicago, Ill., a Corporation. Filed Apr. 23, 1928. Serial No. 272,275. 1 Claim. (Cl. 211—161.)

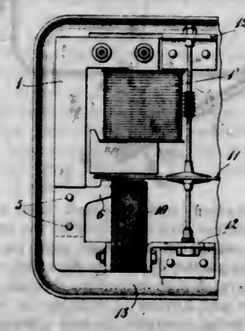
A floral rack comprising a main frame provided with cross-bars, frame supports of different widths and lengths pivoted to the upper portion of said frame for supporting the same in different angular positions, the smaller of said frame supports being provided with aligned guides intermediate the sides thereof, and an elongated slidable bar fitted in said guides, whereby said smaller frame support may be held in substantially the same plane as the said main frame and form a continuation thereof by sliding said bar downwardly and engaging its end portion behind one of the cross-bars on said main frame, substantially as set forth.

1,689,989. PRODUCTION OF AXLE HOUSINGS. HERBERT H. WILLIAMS, Brooklyn, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Jan. 23, 1926. Serial No. 83,331. 6 Claims. (Cl. 29—153.1.)



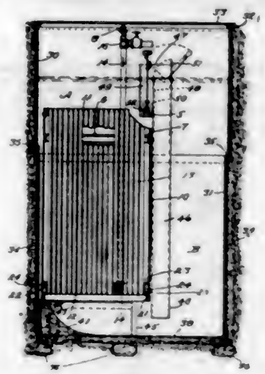
1. The method of making axle housings which consists in forming segments of sheet metal with their ends bent obliquely first outward and then inward, uniting said segments and further bending the outward and inward portions referred to to form flanges of double thickness on the ends of the housing.

1,689,990. RUBBER-MIXING MACHINE. FERNLEY H. BANBURY, Ansonia, Conn., assignor, by mesne assignments, to Farrel-Birmingham Company, Incorporated, Ansonia, Conn., a Corporation of Connecticut. Filed Aug. 21, 1926. Serial No. 130,731. 2 Claims. (Cl. 18—2.)



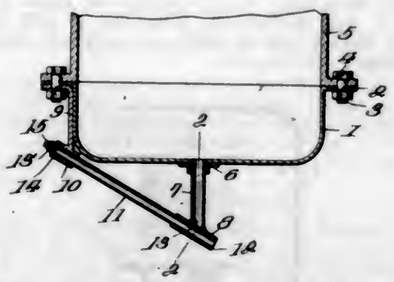
1. A machine of the character described for mixing plastic stock having a casing, a feed hopper mounted on the casing, a door hinged to and adapted to open and close said hopper, said door having a yielding closing edge, a cylinder and piston operatively connected between said door and the casing, and connections for admitting fluid pressure to said cylinder.

1,689,991. ELEVATOR FOR TYPOGRAPHICAL MACHINES. ALFRED M. BERRY, Bellrose, N. Y., assignor to Intertype Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 11, 1928. Serial No. 253,682. 9 Claims. (Cl. 199—37.)



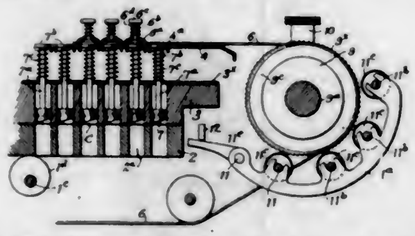
1. In a typographical machine, an elevator for conveying matrices to matrix distributing mechanism, comprising a matrix supporting bar, a positioning member for said bar in fixed relation to it, and means pivotally supporting said bar and member to swing on an axis transverse to the length of said bar.

1,689,992. ELECTRICITY METER. WILLI BEUSCH, Zug, Switzerland, assignor to the Firm Landis & Gyr A.-G., Zug, Switzerland. Filed Aug. 6, 1923, Serial No. 656,041, and in Switzerland Aug. 18, 1922. 4 Claims. (Cl. 171—264.)



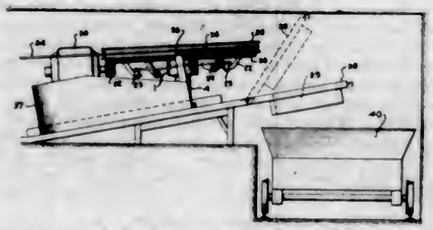
3. In an induction meter in combination, a motor mechanism comprising a main current coil and core and a pressure coil and core, and a connecting and supporting member fastened to both said cores and having an integral portion thereof formed into a counterpole for the pressure magnet.

1,689,993. SOIL-WATER CATCH BASIN AND HEAT RECLAIMER. FRED S. BOLTZ, Mansfield, Mass. Filed Feb. 17, 1926. Serial No. 88,908. 10 Claims. (Cl. 257—121.)



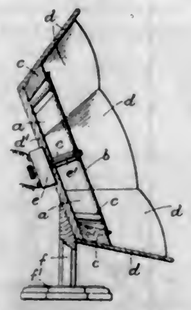
1. An apparatus of the character described, comprising a shell having tube sheets in its opposite ends and tubes extending through the shell and connected with said sheets, said tubes being open at their ends, a source of fresh water supply, a pipe connected therewith adapted to introduce fresh water into the shell, an outlet pipe leading from the shell through which the fresh water is normally discharged, in combination with a soil water catch basin in which said shell is enclosed and mounted in such manner that the said tubes are open at both ends to the soil water in the basin, an overflow pipe extending from the lower part of the basin below the bottom of the shell to a point some distance above the top of the shell, and having a discharge outlet to a suitable place outside of the basin.

1,689,994. DRAIN VALVE FOR AUTOMOBILE CRANK CASES. WILLIAM COMERFORD, Buffalo, N. Y., assignor of one-fifth to Minnie J. Comerford, one-fifth to Mary Comerford, one-fifth to Eileen Comerford, and one-fifth to Joseph P. Comerford, Buffalo, N. Y. Filed Aug. 13, 1923. Serial No. 657,110. 7 Claims. (Cl. 184—106.)



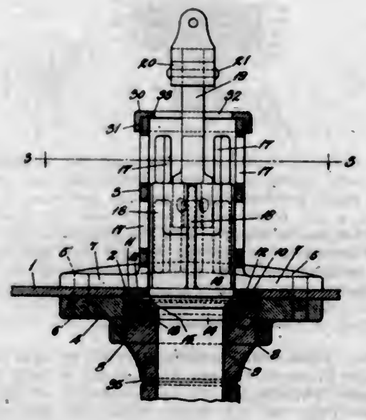
1. The combination with a crank case of an automobile, of a discharge pipe connected to the bottom of the crank case, an obliquely arranged pipe rigidly carried by the lower end of the discharge pipe and communicating therewith, a valve pipe extending through the obliquely arranged pipe and having an opening in one side, and said valve pipe being rotatable in said obliquely arranged pipe so that the opening will establish a communication between said pipes and such communication be closed selectively, and a bracket carried by the side of the crank case and supporting the upper end of the last mentioned pipe, and means for operating and locking the last mentioned pipe in its adjusted position.

1,689,995. CHECK-PERFORATING MACHINE. JOHN H. DAVIS, Chicago, Ill., assignor to Charles O. Hadly, Philadelphia, Pa. Filed Feb. 1, 1927. Serial No. 165,108. 17 Claims. (Cl. 164—111.)



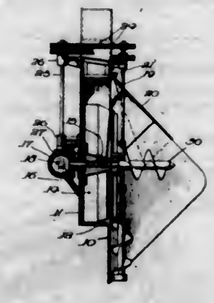
1. In a check perforating machine, a plurality of perforating disks and a movable endless tape carrying keys for operating said disks.

1,689,996. CABLE-DRIVING MECHANISM. KENNETH DAVIS, St. Benedict, Pa., assignor to Rembrandt Peale, Richard Peale, and Rembrandt Peale, jr., trustees, St. Benedict, Pa. Filed July 5, 1924. Serial No. 724,337. 2 Claims. (Cl. 64—40.)



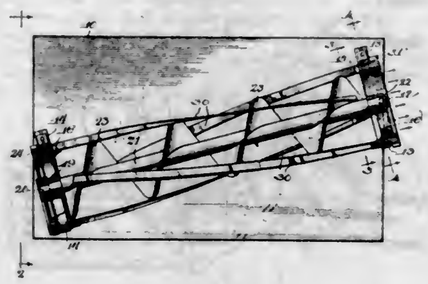
1. In a cable driving mechanism in combination a rotatable sheave about which the cable runs having a central supporting web, a plurality of cable gripping levers pivoted to the central web, an actuating arm on each lever inclined inwardly away from the pivot, spring means fixed to the web and to the actuating arms for impelling the levers to gripping position, cam rollers on the actuating arms, and a stationary cam track, cooperating with the rollers for controlling the gripping movement of the levers.

1,689,997. LOUD SPEAKER, GRAMOPHONE, AND OTHER SOUND RECORDING OR REPRODUCING APPARATUS. CHARLES MAHÉ DE CHENAL DE LA BOURDONNAIS, Loventor Manor, near Totnes, England. Filed July 19, 1926. Serial No. 123,506, and in Great Britain July 29, 1925. 4 Claims. (Cl. 181—27.)



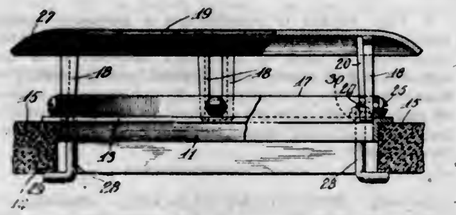
1. A loud speaker comprising a truncated conical horn closed at the truncated end thereof, a diaphragm supported parallel to the closed end and forming therewith a resonance chamber which is open to the open end of the horn, and means for vibrating the diaphragm.

1,689,998. TANK-CAR VALVE. ALBERT M. DOW, El Paso, Tex. Filed Feb. 9, 1921, Serial No. 443,578. Renewed Jan. 17, 1928. 5 Claims. (Cl. 137—21.)



1. A discharge valve and discharge pipe for tank cars, comprising in combination; a tank, a valve housing on the interior thereof, a flanged member opposing said valve housing on the exterior of said tank and rigidly secured to said tank and said housing, a discharge pipe removably secured to said flanged member, a valve seat removably carried by said discharge pipe, a valve contained within said housing and adapted to rest on said valve seat, means for operating said valve from the outside of said tank, and means carried by said discharge pipe to effect a liquid connection between said discharge pipe and said valve housing.

1,689,999. SNOWPLOW FEEDING MECHANISM. EMERY H. FAHRNEY, Chicago, Ill. Filed Apr. 30, 1925. Serial No. 26,911. 5 Claims. (Cl. 37—43.)

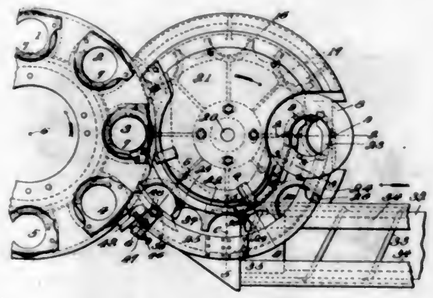


1. A snow plow including a casing having an inlet and a discharge outlet, a rotor in the casing, a scoop like device discharging into the casing, a shaft adjacent and extending lengthwise of the bottom of the scoop and lengthwise of the direction of travel of the scoop, means for rotating the shaft, and a conveyor blade mounted upon the shaft and operating to feed the material through the scoop and along the bottom thereof to the inlet of the rotor casing.

1,690,000. SNOWPLOW. EMERY H. FAHRNEY, Chicago, Ill. Filed May 13, 1926. Serial No. 108,744. 12 Claims. (Cl. 37—43.)

1. A snow plow including a scoop like structure, a conveyor disposed within and transversely across the scoop for delivering the snow to one side thereof, means encompassing and rotatable about the conveyor for disintegrating the snow and feeding the same to the conveyor therethrough, and means for operating the conveyor and the first said means.

1,690,001. FLOOR VENT. ARTHUR J. FILKINS, Riverside, Ill., assignor to Paul Dickinson, Incorporated, a Corporation of Illinois. Filed Aug. 5, 1925. Serial No. 48,205. 4 Claims. (Cl. 98—41.)

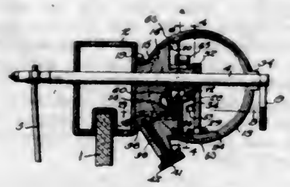


1. A floor vent comprising a base having a vertically depending flange extending around said base in the form of a rectangle for engagement with the floor adjacent the aperture formed therein, said base having an oblong aperture extending therethrough, a cap mounted on said base having a plurality of spaced fork members slidingly engaging said base and having oppositely disposed recessed portions formed therein; and bolts extending through said base and having nuts engaging the recessed portions of said fork members for adjustably securing said cap to said base.

1,690,002. CAN-END-FEEDING MECHANISM FOR CLOSING MACHINES. HENRY A. FINK, Oak Park, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed May 18, 1926. Serial No. 109,899. 8 Claims. (Cl. 113—114.)

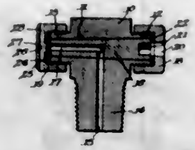
1. A filled can closing machine comprising a seaming unit, means for delivering the filled cans to the seaming unit, a stack holder for the can ends, guides extending from the base of said stack holder over the path of travel of the filled can, said guides having ledges extending

underneath the can end and supporting said can end by the edge portions only thereof, means for moving the can end along said supporting ledges, said supporting ledges



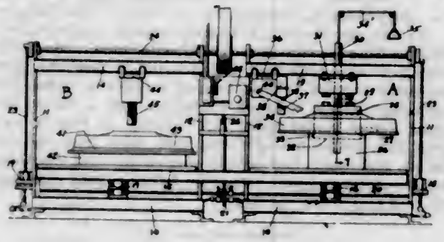
being cut away at a point directly over the path of travel of the filled can whereby the can end sliding along said edges will drop on to the filled can.

1,690,003. METHOD OF MAKING FILLERS FOR BAKING PANS. JOHN W. FOZBCH, Jr., Wilkes-Barre, Pa. Filed Sept. 2, 1926. Serial No. 133,207. 2 Claims. (Cl. 18—59.



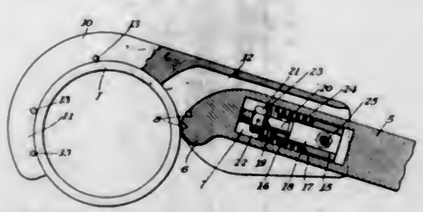
1. That method of constructing a baking pan which consists in providing inner and outer pan wall members, preforming a block of insulating material to a form suitable to fit between said members, and assembling the members on the insulating block and applying pressure to said members to cause the same to engage the insulating block uniformly throughout the inner and outer surfaces of said block.

1,690,004. WINDSHIELD CLEANER. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Apr. 20, 1925. Serial No. 24,601. 7 Claims. (Cl. 121—164.)



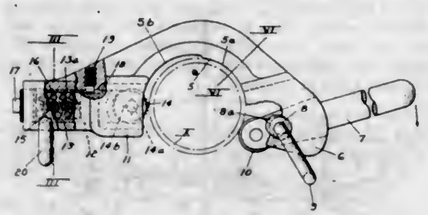
1. A snap over valve mechanism for fluid motors comprising a valve shifting member, a spring connected to said valve shifting member to effect movement thereof, means actuated by the movement of a movable part of the motor to store up energy in said spring to effect movement of the valve shifting member, a valve loosely connected to said valve shifting member to permit slight independent movement thereof, and valve supporting means resiliently retaining said valve on its seat.

1,690,005. LIQUID-CONTROL COCK. CHARLES T. FORD, Washington, D. C. Filed Nov. 19, 1923. Serial No. 675,764. 14 Claims. (Cl. 251—95.)



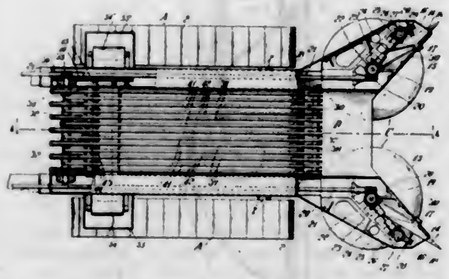
1. In a device of the class described, the combination with a body having a key seat therethrough and an attaching nipple provided with a passage delivering to said key seat, a key fitted closely to the seat and having a passage adapted to register with the passage in said nipple and delivering at one end of said key, and sealing caps at each end of said body portion to seal the ends of the key, one of said caps sealing the key passage.

1,690,006. DISK-WHEEL-STRAIGHTENING MACHINE. RICHARD FURBUSH, Chicago, Ill., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 22, 1924. Serial No. 745,125. 7 Claims. (Cl. 153—48.)



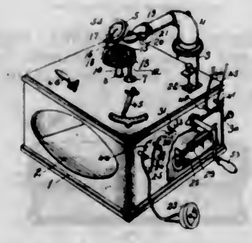
1. In a wheel straightening device, the combination of movable means for clamping the central portion of a disk wheel, and means for moving said clamping means in a direction substantially normal to the plane of a clamped wheel, a support, a pressing tool carried by and movable with respect to said support and adapted to engage said wheel.

1,690,007. AUTOMATIC RELEASING TONGS. EDGAR E. GREVE, Bellevue, Pa. Filed Mar. 1, 1922. Serial No. 540,169. 11 Claims. (Cl. 81—91.)



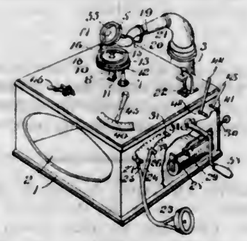
10. In a pipe tong, a jaw member, a handle member pivotally secured to the jaw member, a spring-projected pipe-engaging means on one of the members, and a pipe-engaging means on the other member, said handle member being movable in an arc from pipe-engaging to pipe-releasing position upon forcing the spring projected pipe-engaging means to retracted position.

1,690,008. AUTOMATIC RELEASING TONGS. EDGAR E. GREVE, Bellevue, Pa. Filed June 4, 1925. Serial No. 34,847. 9 Claims. (Cl. 81—91.)



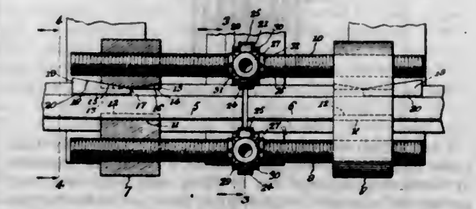
1. In a pipe tong, a curved jaw member, a handle pivotally secured to the jaw member and engageable with a pipe, a spring projected pipe engaging means on the jaw member, said handle being movable in an arc from pipe engaging to pipe releasing position upon forcing the spring projected pipe engaging means to retracted position.

1,690,009. BALLAST-CLEANING APPARATUS. PERRY H. HAMILTON, Baltimore, Md., assignor to Maintenance Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 26, 1925. Serial No. 52,567. 13 Claims. (Cl. 262—2.)



1. A portable apparatus for cleaning rock-ballast, comprising a movable carriage, means at the front end of the carriage for digging up the ballast, means for conveying the ballast upwardly through the carriage to be discharged at the rear end thereof, and means for imparting an up and down movement to the ballast during this travel through the carriage to shake out the finer material.

1,690,010. RADIOTELEPHONY. WARREN D. HOUSE, Kansas City, Mo. Filed May 2, 1923. Serial No. 636,203. 7 Claims. (Cl. 250—21.)

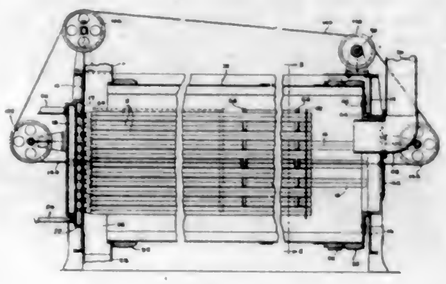


1. The method of converting radio waves into sound waves, which includes rectifying the radio waves, causing such rectified waves to pass from one to the other of two elements, which are maintained in a rubbing relationship by an outer force, and between which there exists a relatively high electrical resistance corresponding to the relatively high potential and adapted for the low amperage of said rectified waves, the characteristics of said elements being such that electric currents of the magnitude of those produced in a radio receiving circuit by a crystal detector or a single tube detector, will serve to vary the frictional relationship between said elements and thereby produce audible signals, and utilizing said varying frictional relationship to produce audible signals.

1,690,011. RADIO LOUD SPEAKER. WARREN D. HOUSE, Kansas City, Mo. Original application filed May 2, 1923. Serial No. 636,203. Divided and this application filed Nov. 7, 1927. Serial No. 231,440. 10 Claims. (Cl. 179—100.1.)

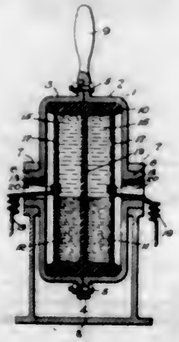
2. A loud speaker comprising a rotatable electrolytic member having a circular concentric guide, a metal electrode in direct contact with said guide and adapted for travel thereon, sound amplifying means connected with and operated by said electrode, and means whereby electric currents may be passed through the electrode and said rotatable member.

1,690,012. RAIL ADJUSTER. ARTHUR S. HUGHES, Minden, La., assignor of seven-twentieths to Dr. John B. Benton, Minden, La. Filed Oct. 13, 1927. Serial No. 226,031. 5 Claims. (Cl. 254—43.)



1. An improved rail adjuster comprising spaced heads for engaging the rails and having cut away portions to receive the rails with shoulders at one side to hook under the balls of the rails, the other sides of the heads being provided with divergent inclined walls, wedges for removably engaging either of the inclined walls and the rail balls, and means for moving said heads together or apart.

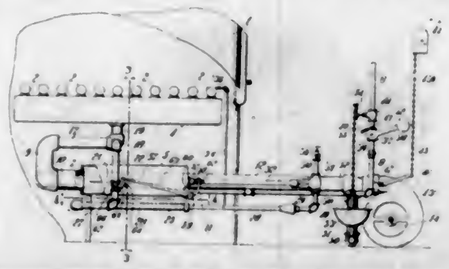
1,690,013. APPARATUS FOR DRYING OR COOLING MATERIAL. ALEXI G. HUHN, Minneapolis, Minn., assignor to A. Huhn Manufacturing Company, Minneapolis, Minn., a Corporation. Filed Nov. 18, 1925. Serial No. 69,774. 7 Claims. (Cl. 257—92.)



4. Apparatus for drying or cooling material comprising a rotatable casing, a plurality of fixed tubes extending

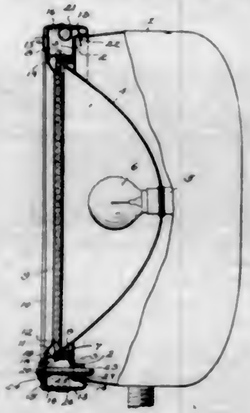
within said casing, said tubes serving to contain a temperature-changing agent, a scraping device engaging the exterior of said tubes, cables extending through the opposite

ends of said casing and attached to said scraping device, drums around which said cables pass, a shaft to which said drums are secured, and means for rocking said shaft to cause reciprocation of said scraping device.



1,690,014. LIQUID SWITCH. JOSEPH R. JACKSON, Jr., Brookline, Mass., assignor to Marguerite E. Jackson, Boston, Mass. Filed Apr. 25, 1924, Serial No. 708,902. Renewed Aug. 24, 1928. 8 Claims. (Cl. 200—152.)

7. A switch comprising a hollow rotatable body composed largely of insulating material, at least one partition of insulating material for dividing said body into compartments, said partition having at least one orifice for providing communication between said compartments, a body of mercury partially filling said compartments and adapted to be united when an orifice is submerged in said mercury by rotation of said hollow body, the side walls of said rotatable hollow body being composed of flexible metal adapted to yield upon expansion by heat of the contents of said compartments, said side walls also constituting the terminals of an electric circuit and in constant electrical communication with said mercury.



1,690,015. HYDROCARBON BURNER. GEORGE B. JOHNSON, Evanston, Ill. Filed June 24, 1927. Serial No. 201,158. 18 Claims. (Cl. 158—61.)

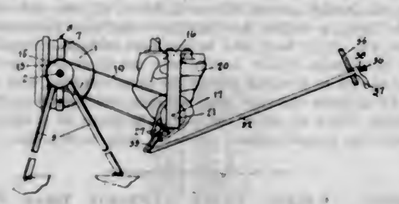
1. In a fuel oil burner, a vaporizer, means for supplying oil thereto, a burner for heating the vaporizer, a main burner, a conduit having branches leading to the respective burners, means for forcing air through the conduit, the conduit having a branch passage leading to the vaporizer and in constantly unobstructed communication therewith, an ad-

ditional auxiliary burner for heating the vaporizer, and means controlled by the temperature in the vaporizer for regulating the auxiliary burner.

1,690,016. VEHICLE HEADLIGHT. CHRISTIAN H. JORDING, Columbus, Ohio, assignor to The John W. Brown Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Feb. 17, 1926, Serial No. 88,897. Renewed Sept. 17, 1928. 1 Claim. (Cl. 240—41.)

In a vehicle head lamp, a lens ring, a single metal stamping comprising a central portion secured internally within said lens ring, said stamping being split from one end toward said central portion to form resilient locking tongues adapted to connect said ring with an associated lamp casing, and a second extension formed with said stamping and arranged for holding engagement with a lens positioned in said ring.

1,690,017. HINGE AND COMPACT HOLDER FOR VANITY CASES. WILLIAM G. KENDALL, Newark, N. J. Filed Feb. 17, 1928. Serial No. 255,105. 9 Claims. (Cl. 132—82.)



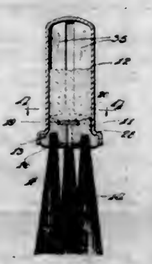
1. A vanity case, comprising a body having a bottom and an upstanding annular wall formed with an opening therein appreciably below the upper edge thereof and an interiorly positioned annular depression in the plane of the opening, a lid for said body adapted to telescope partially over said upstanding wall when closed, said lid being provided with a curled extension presenting a hinge knuckle, said extension projecting through said opening, and a compact pad holding ring arranged in said annular depression for holding a compact in said body, said ring extending through said knuckle for completing the hinge structure.

1,690,018. ADJUSTABLE WRENCH. BRANCH P. KERFOOT, New York, N. Y. Filed Oct. 27, 1924. Serial No. 746,715. 3 Claims. (Cl. 81—113.)

1. In a wrench, the combination with a handle and an adjustable sectional socket, of a shank directly and positively connecting the handle and the socket, a contracting sleeve threaded on the exterior of the shank to be screwed in one direction along the shank to contract the socket, and an expanding core within the shank and movable longitudinally of the shank with the sleeve to expand the socket when the sleeve is screwed along the shank in the opposite direction.

1,690,019. AUTOMOBILE LAMP. MASON H. KERN, Toledo, Ohio. Filed Apr. 18, 1927. Serial No. 184,797. 4 Claims. (Cl. 240—61.)

1. A lamp for vehicles and the like, an arm, connecting means between the lamp and the arm, a locking mechanism connected to the arm for locking the arm in any position to which it may be turned, a tube connected to the arm and extending to near the driver's seat, and a rod located in the tube connected to the locking means and extending to near the driver's seat, whereby the lamp may be adjustably located in position.



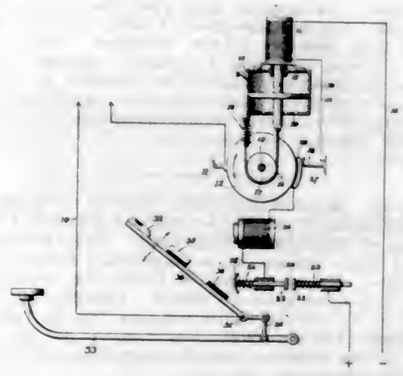
1,690,020. PAVEMENT AND PROCESS OF LAYING SAME. LESTER KIRSCHBRAUN, Chicago, Ill. Filed May 26, 1920. Serial No. 384,258. 10 Claims. (Cl. 94—23.)

1. A process of forming a pavement, comprising laying a concrete foundation, applying an emulsified mixture of bitumen in water and containing an inert emulsifying agent to the concrete base while the latter is still plastic to form a unitary structure by combination of the miscible substances.

1,690,021. MONODIAZO COMPOUNDS OF 1.4-DIAMINOANTHRAQUINONE-β-SULPHONIC ACIDS AND PROCESS OF PREPARING THE SAME. GEORG KRÄNZLEIN and FRITZ ROEMER, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 18, 1927, Serial No. 161,954, and in Germany Jan. 25, 1926. 5 Claims. (Cl. 260—60.)

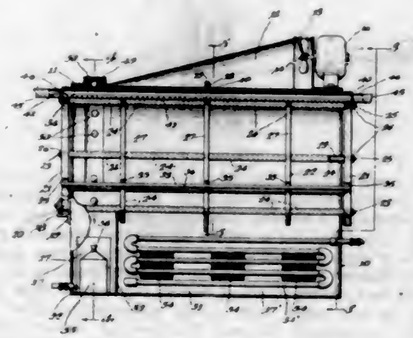
4. As new products 1-amino-2.6-disulphonic acid-anthraquinone-4-diazonium compounds.

1,690,022. POWDER DUSTER. MORRIS LANGHAUS, New York, N. Y. Filed Apr. 10, 1928. Serial No. 268,959. 1 Claim. (Cl. 15—138.)



A powder duster comprising an elongated brush back having bristles extending therefrom, and openings extending therethrough, a housing removably supported by said brush back for containing a supply of powder, staggered baffle walls within said housing for disintegrating the powder upon shaking the duster, a plate slidably mounted on said brush back having openings therein for register with openings in said brush back, spring means acting upon said plate to normally disposed the openings therein out of registration with the openings in said brush back, and a manipulating element extending from said plate to the exterior of said housing by which said plate may be moved against the action of said spring upon manual depression of said manipulating element to cause registration of said openings to allow powder from said housing to freely pass to said bristles.

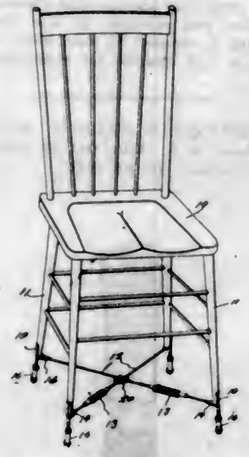
1,690,023. CODE-SENDING APPARATUS. LOUIS J. LEVY, Jersey City, N. J. Filed Jan. 14, 1928. Serial No. 246,733. 10 Claims. (Cl. 178—79.)



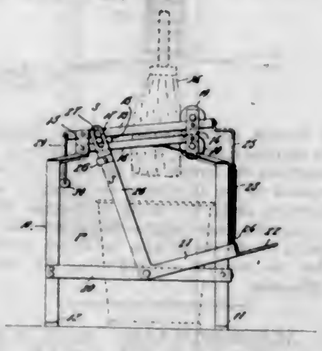
1. In an apparatus for transmitting code signals, a relay circuit including a common wiper contact element mounted for movement in a defined path and a character-forming contact element normally disposed out of the path of movement of the wiper contact element and manually swingable into the path of movement thereof; a circuit including in series electrical means for moving the wiper contact element in one direction and electrical means for holding the character-forming contact element when moved into the path of movement of the wiper contact element, a

normal'y open switch in said circuit operable by the movement of the character-forming contact element into the path of movement of the wiper contact element to close

the circuit, and a second switch in said circuit operable to break said circuit after the wiper contact element has completely moved over the character-forming contact element.



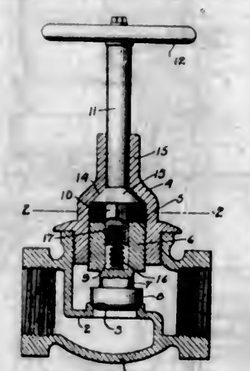
1,690,024. DRYING MACHINE. GEORGE A. LEWIS, Chicago, Ill. Filed Aug. 25, 1926. Serial No. 131,499. 4 Claims. (Cl. 34—5.)



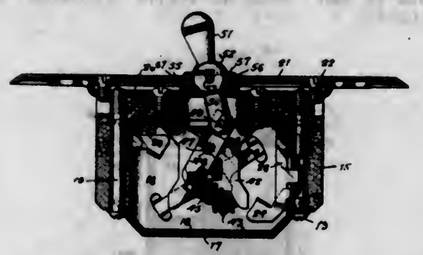
1. A drying machine of the class described comprising a body, a skeleton carriage, means for rotating the skeleton carriage, a plurality of clothes containing baskets, means for removably associating the baskets with the skeleton carriage for passage through the skeleton carriage, and means for subjecting the clothes contained within the baskets to a heating element during their passage through the skeleton carriage.

1,690,025. CHAIR ATTACHMENT. GEORGE WILLIAM LOVERIDGE, Republic, Wash. Filed June 11, 1927. Serial No. 198,164. 1 Claim. (Cl. 155—197.)

A chair attachment of the character described comprising a pair of tie rods adapted to be arranged diagonally between the legs of the chair, a turnbuckle included in the length of each rod, each rod terminating to provide a relatively broad extremity upon which the adjacent leg of the chair is adapted to repose, each extremity having a central opening adapted to receive a fastening element for securing the leg thereto, an extension rising from the extremity and substantially V-shaped in cross section and adapted to engage the outer surface of the adjacent leg, a threaded portion depending from the extremity to one side of said opening and in align with said extension, and an adjustable foot associated with said threaded portion.



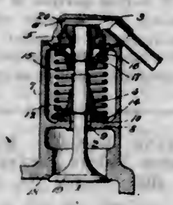
1,690,026. WRINGER. JOSEPH B. MISKEWICZ, Pittsburgh, Pa. Filed July 27, 1927. Serial No. 208,843. 1 Claim. (Cl. 15—262.)



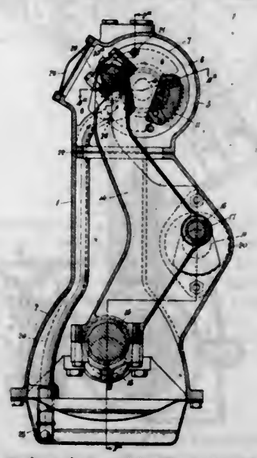
In a wringer, a frame comprising legs, inwardly offset vertically disposed extensions at the top of said legs, means including spaced parallel inclined bars connecting said extensions at opposite sides of the frame and defining guide bars, vertically spaced rollers mounted at one end of the guide bars, a roller having its trunnions mounted between the guide bars and movable to engage both of the first mentioned rollers, a pivotally mounted foot operated yoke, means to yieldingly hold the yoke elevated, and arms extending from the yoke and engaging the trunnions of the movable roller to cause the latter to move in a direction toward the spaced rollers when the yoke is depressed.

1,690,027. VALVE. FRANK O. NELSON, Tekoa, Wash. Filed Apr. 2, 1926. Serial No. 99,338. 1 Claim. (Cl. 251—47.)

A valve of the class described comprising a body having a valve seat therein, a bonnet detachably connected with the body and having an internally threaded part and a reduced tubular upper part, a valve member having its lower end shaped to engage the seat with external threads on its upper part engaging the threads in the bonnet, a handle having its stem guided in the tubular upper part and passing into the bonnet, the inner end of the stem being of rectangular shape and the valve member having a similarly shaped socket for slidingly receiving said end, said end having a socket therein, a frusto-conical part on the stem and a similar shaped part in the bonnet engaged by the same and a spring in the valve member and engaging the socket in the inner end of the handle stem for holding the conical parts in engagement.

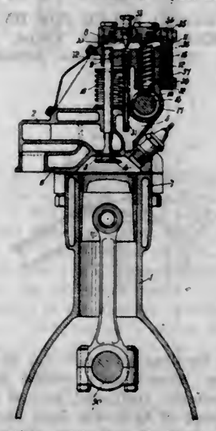


1,690,028. ELECTRIC SWITCH. ARVID H. NERO, New Britain, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 21, 1922. Serial No. 538,271. 3 Claims. (Cl. 200—172.)



1. In an electric switch, an insulating body, a bridge mounted thereon and provided with bearings, a switch mechanism, a thumb lever having a freely detachable operating association with said mechanism and freely pivoted on said bridge bearings, in combination with a cover plate and a readily detachably retaining member underlying the latter and covering said lever bearing on the bridge.

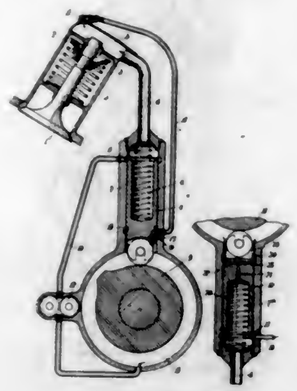
1,690,029. VALVE GUIDE. WARREN NOBLE, Detroit, Mich. Filed Mar. 10, 1927. Serial No. 174,294. 6 Claims. (Cl. 123—90.)



6. In combination with a poppet valve having a spherical seating face and a corresponding valve seat having a counterpart face, a two-point guide device including a guide having universal connection with the stem of said valve remote from the head thereof, a further guide device towards the head of the valve, including a universal connection providing a fixed point about which said valve may swing to accommodate lateral change of location of said valve seat relative to said first mentioned guide device, said further guide being movable with said valve stem, and yieldable means tending to maintain said further guide against axial distance.

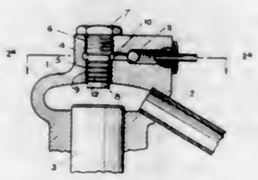
1,690,030. INTERNAL-COMBUSTION ENGINE. WARREN NOBLE, Detroit, Mich. Filed Apr. 11, 1927. Serial No. 182,668. 19 Claims. (Cl. 123—90.)

2. In an engine, in combination, a detachable cylinder head structure, a crankshaft in the lower part of said engine, a camshaft mounted in said cylinder head structure, and camshaft driving means comprising camshaft gearing in said cylinder head structure, a crank operably connected to said gearing, a corresponding crank on said crankshaft, a further crank mounted in said engine offset from a plane extending through said first mentioned crank, and a connecting rod coupling all of said cranks together for synchronous operation.



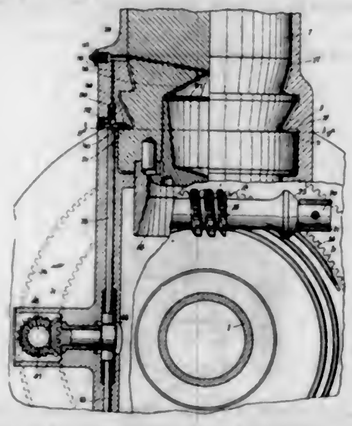
1,690,031. VALVE-OPERATING SYSTEM. WARREN NOBLE and LEON V. PITTMAN, Detroit, Mich.; said Pittman assignor to said Noble. Filed Apr. 14, 1927. Serial No. 183,710. 10 Claims. (Cl. 123—90.)

2. In combination with a cylinder head structure of an internal combustion engine, having chambers for the circulation of cooling fluid therethrough, a self-contained



valve actuating system incorporated in said structure, said system including hydraulic valve-lifting means, a camshaft operating said valve-lifting means, said valve-lifting means being connected for fluid supply with a cooling chamber of said cylinder head, and a pump circulating hydraulic fluid to said valve actuating means through said cooling chamber.

1,690,032. HYDRAULIC VALVE GEAR. WARREN NOBLE and LEON V. PITTMAN, Detroit, Mich.; said Pittman assignor to said Noble. Filed Apr. 25, 1927. Serial No. 186,275. 5 Claims. (Cl. 123—90.)



1. In combination with a puppet valve, valve closing means, valve actuating means, including a hydraulic fluid casing to the interior of which the stem of said valve is exposed, an actuator cylinder forming part of said casing, said cylinder having a fluid supply port therein, means supplying fluid under pressure through said port to said cylinder, valve actuating plunger reciprocable in said cylinder, plunger operating means, and a relief conduit extending from a region of air accumulation in said casing, said fluid supply port and the outlet of said relief conduit being closed by said plunger when it is in a valve-unseating position, substantially as described.

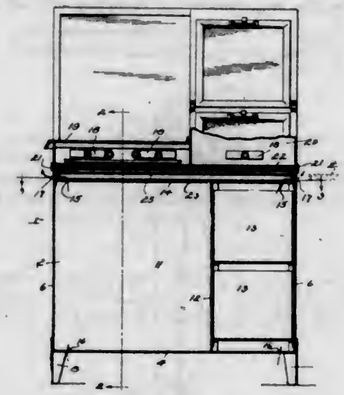
1,690,033. AIR-BLEED VALVE FOR HYDRAULIC ACTUATING MEANS. WARREN NOBLE, Detroit, Mich. Filed Apr. 25, 1927. Serial No. 186,556. 4 Claims. (Cl. 137—69.)

3. Means for bleeding air from the fluid casing of a hydraulic system, comprising a walled annular passage the walls whereof are restricted beyond an extent permitting free passage of hydraulic fluid therebetween, said passage opening from a region of air accumulation in said casing, and a non-return outlet valve for said passage.

1,690,034. VARIABLE PROPELLER. WARREN NOBLE, Detroit, Mich. Filed Apr. 27, 1927. Serial No. 187,048. 14 Claims. (Cl. 170—163.)

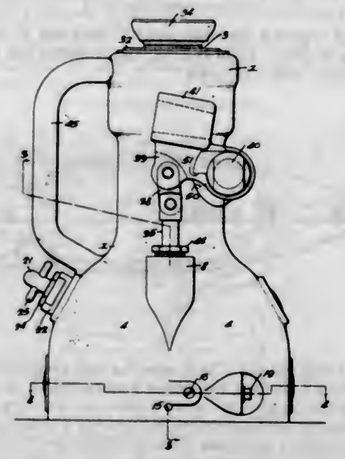
1. In a variable pitch propeller means for applying to each blade a force opposite in sense to its centrifugal component, said means comprising a hydraulic pump actuating against each blade in a direction opposite to its centrifugal component, and pump operating mechanism.

1,690,035. LIQUID CONTAINER. AUGUSTINE G. O'NEILL and CLARENCE M. JONES, Tulsa, Okla. Filed Feb. 16, 1927. Serial No. 168,776. 12 Claims. (Cl. 215—1.)



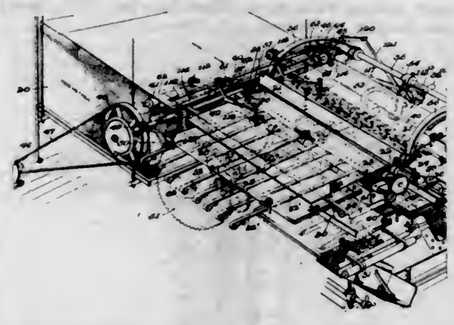
1. A container of the character described, comprising an upright hollow portion having a bottom, said bottom having an outwardly extending continuous marginal flange formed with its outer edge portion inclined upwardly and outwardly, thus producing an external trough, said upright hollow portion of the container having an external flange at its upper end formed with a depending continuous lip at its outer edge, said lip being located directly above the external trough at the lower end of the upright portion of said container.

1,690,036. COOKING RANGE. MORTIMER LEONARD PACKER and JAMES MARTIN PACKER, Columbus, Ohio. Filed Oct. 21, 1925. Serial No. 64,024. 1 Claim. (Cl. 126—37.)



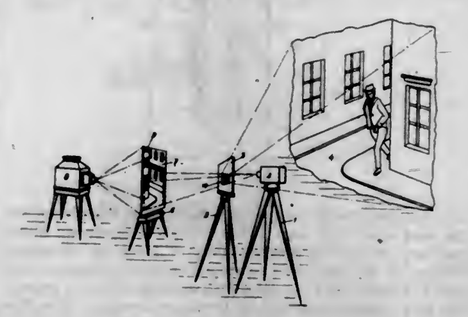
In a combination kitchen range, a cabinet section, a superposed range section, said range section being spaced from said cabinet section to provide a heat dissipating

chamber between said sections, passages leading from said cabinet section into said chamber, and passages establishing communication from said chamber to the



atmosphere, a table structure slidably mounted within said chamber to assume active and inactive positions, said table being so formed or placed within said chamber that air is permitted to circulate through said chamber.

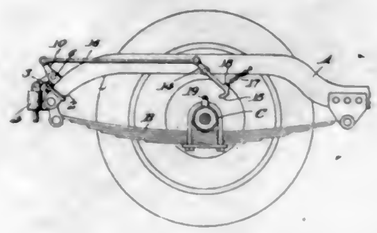
1,690,037. FLUID-ACTUATED JACK. THOMAS W. PEDERSEN, New York, N. Y., assignor to Oil Jack, Inc., New York, N. Y., a Corporation of New York. Filed June 1, 1925. Serial No. 34,100. 4 Claims. (Cl. 138—9.)



1. A fluid operated jack comprising an integrally formed reservoir, base, main cylinder and pump cylinder; a movable stem in said main cylinder having an enlarged portion in the cylindrical surface of which are formed slots to permit free passage of fluid from one side thereof to the other; a threaded collar screwed into a recess in the outer end of the main cylinder and slidably fitting said stem thereby acting jointly as a guide therefor and as a stop for limiting its travel by engagement with said enlarged portion; a plunger in the pump cylinder; and means for controlling the flow of fluid from the main cylinder to the reservoir.

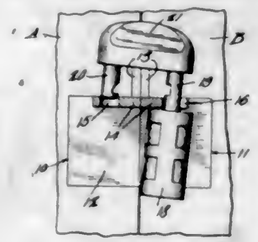
1,690,038. FOLDING MACHINE. EARL D. RADER, Bedford Township, Westchester County, N. Y., assignor to Dexter Folder Company, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1925. Serial No. 71,167. 29 Claims. (Cl. 270—67.)

1. In combination, a reciprocatory folding blade, means for feeding and positioning successive sheets under said blade, a looper attachment positioned adjacent said first-fold mechanism and receiving the signature therefrom and forming a second parallel fold therein, means for preventing the folded sheet from being operated on by said looper mechanism, and a third folding mechanism receiving the sheet from said looper mechanism and giving the same a third fold.



1,690,039. ART OF MAKING MOTION PICTURES. EUGEN SCHÜFFTAN, Berlin-Wilmersdorf, Germany. Original application filed Sept. 15, 1923, Serial No. 663,011, and in Germany Sept. 13, 1922. Divided and this application filed Sept. 5, 1925. Serial No. 54,731. 5 Claims. (Cl. 88—16.)

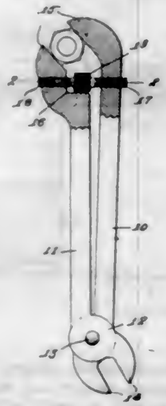
1. The art of making composite motion pictures of a set or scene and a second set or scene which is complementary to the first set or scene which comprises disposing the first set or scene within range of a camera, masking a portion of said first set or scene with a reflecting surface mounted on a transparent member having a greater area than the reflecting surface, photographing the unmasked portion of the first set or scene directly through the transparent member on a series of frame of a film while masking those portions of the frame which are unaffected by the light rays, arranging the complementary set or scene so that an image of said set or scene will be reflected into the camera, setting and adjusting the image of the complementary set or scene with the image of the first set or scene on the frame so that the images will form a composite coordinated image and then photographing the reflected image of the complementary set or scene on the



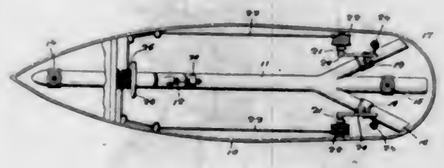
same successive frame in the camera, while masking those portions of the frame which have been previously affected by light rays, and blending the meeting edges of the images into each other.

1,690,040. AUTO AXLE-FRAME LOCK. LORENZ SOSDIAN, Asbury Park, N. J. Filed May 20, 1927. Serial No. 193,006. 5 Claims. (Cl. 254—133.)

1. In a jacking device for motor vehicles, an eyed member secured to the axle housing of the vehicle, means pivotally secured to the frame and adapted to be received in said eyed member for connecting the frame with the axle housing, means engageable by a lifting means for arranging the hook in the eyed member, and spring means for disengaging the hook upon releasing the lifting means.



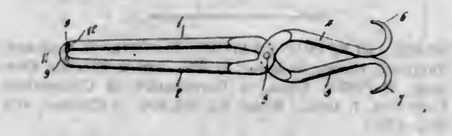
1,690,041. SECURING DEVICE. JOHN V. SUNDQUIST, Norwood, Mass. Filed June 8, 1925. Serial No. 35,741. 2 Claims. (Cl. 70—108.)



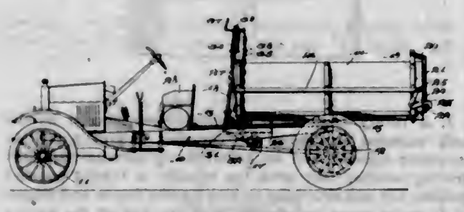
1. In combination, a padlock having its shackle including long and short legs connected by a relatively heavy and large head, and butt members of plate-like formation adapted to be secured to relatively movable elements, said butt members being recessed into meeting edges of a member and closure whereby to be non-removable, including outstanding ledges, one ledge having a hole and the other an open ended slot therein, the hole being adapted to receive the short leg of the shackle and the slot being adapted to receive the long leg thereof, the head engaging upon the top of the ledges and the lock body engaging against the undersides thereof, whereby the lock when fastened will fit closely about and against the ledges to prevent the leaving of cracks of sufficient size to permit the insertion of prying tool, and whereby the lock will be immovable with respect to the butt members.

1,690,042. WRENCH. WALTER C. WALLIS, Clovis, N. Mex. Filed Feb. 16, 1926. Serial No. 88,621. 1 Claim. (Cl. 81—77.)

A wrench comprising pivotally connected handle members provided with oppositely disposed jaw faces, one of said handle members being provided with a cut-out portion adjacent the jaw face therefor, shanks threaded within the handle members, an enlarged elongated portion carried upon the inner end of one of the shanks and disposed within the cut-out portion of the particular handle member, said portion being provided with a socket opening within the free end thereof and including beveled peripheral edges communicating therewith, the adjacent end of the remaining shank reposing within said socket, and a pivot pin passing through said end and the opposed side walls of the enlarged portion to permit relative adjustment to the handle members and to relieve binding action at the juncture of association of the respective shanks.

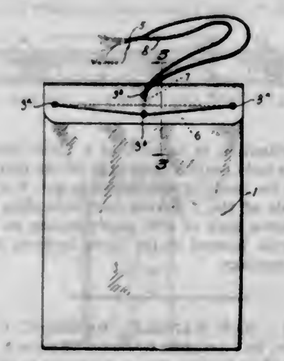


1,690,043. BOAT PROPULSION. WALTER C. WALLIS, Clovis, N. Mex. Filed Feb. 18, 1927. Serial No. 169,287. 1 Claim. (Cl. 115—16.)



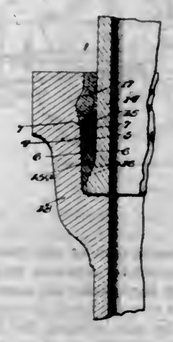
In a vessel having a hull, steering and propelling means comprising a conduit extending longitudinally of the hull and having both ends open, valves at the forward and rear ends of the conduit for controlling passage of water therethrough, a propeller located within the intermediate portion of the conduit, means for driving the propeller, branch conduits communicating and connected with the first named conduits at an intermediate point in advance of the rear valve, gate valves located within said branch conduits, spring pressed pivoted levers connected with said gate valves, winding drums located adjacent said levers and connected therewith, a control windlass located at a remote point and provided with manual turning means, and flexible members trained and wrapped about and upon said windlass, trained over guide pulleys and secured to and wrapped about said drums whereby one or the other of said gate valves may be opened and the other closed from the remote point.

1,680,044. VETERINARY OBSTETRICAL FORCEPS. HUBERT ZINS, Wabasso, Minn. Filed Nov. 3, 1927. Serial No. 230,815. 6 Claims. (Cl. 128—324.)



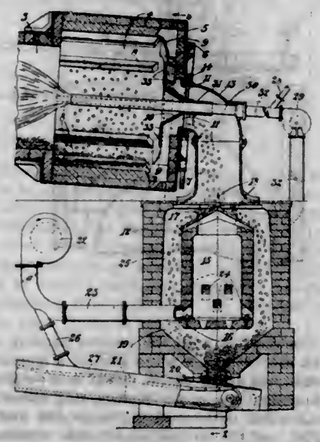
1. A forceps comprising a pair of pivotally connected jaws provided at their front ends with beaks, the beak of one jaw extending therefrom in the direction of the other jaw, and the beaks being adapted to occupy an overlapping relation when the jaws are closed.

1,690,045. DUMP BODY. FRANK R. ALLEN and HENRY M. CHAMPION, Pine Bluff, Ark. Filed June 23, 1926. Serial No. 118,020. 4 Claims. (Cl. 298—19.)



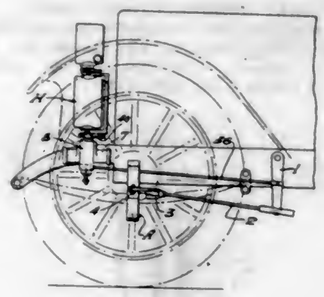
1. In a dump wagon including a rearwardly tiltable body having a lower forward shoe, a dumping lever fulcrumed adjacent to its lower end and normally upstanding in an approximately vertical position along the front of the body, a flexible connection between the upper portion of the lever and the body and including a spring, said lever having a rearward extension below its fulcrum, and a roller carried by said extension and engaging the shoe of the body.

1,690,046. RECEPTACLE. LUCY COTTON AMENT, New York, N. Y. Filed July 21, 1927. Serial No. 207,511. 6 Claims. (Cl. 229—68.)



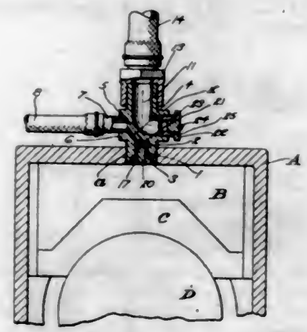
1. A bag having front and back walls, two pairs of apertures near the top edge thereof, a line joining the apertures of one pair intersecting a line joining the apertures of the other pair, a tie threaded through one pair of apertures forming a strand therebetween, and through the other pair forming a second strand overlying that portion of the first stand lying between the first mentioned apertures.

1,690,047. JOINT CONSTRUCTION. FRED C. ARMBRUSTER, Shreveport, La., assignor to The Southwestern Pipe Joint & Engineering Co., Birmingham, Ala., a Corporation of Alabama. Filed Sept. 23, 1926. Serial No. 137,314. 3 Claims. (Cl. 285—115.)



1. A joint of the bell and spigot type having a fibrous packing, an elastic ring above said packing including a body portion and divergent wings extending upwardly from the body portion, a tapered lead expanding strip positioned between the divergent wings, and a sealing ring of cast lead above said expanding strip.

1,690,048. ROTARY KILN AND FURNACE. JOHN HENRY BENTLEY, M'sterton, England. Filed Sept. 9, 1926, Serial No. 134,545, and in Great Britain Jan. 8, 1926. 6 Claims. (Cl. 263—32.)

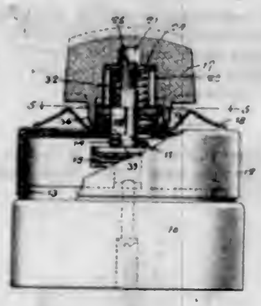


1. In a rotary kiln or furnace having a preliminary cooling chamber between the sintering zone and a central discharge orifice the combination with lifting ducts at the end of the cooling chamber having scoop like openings at its circumference, of a delivery cone provided by a conical or inclined guide closing their inner ends to the interior of the kiln and opening them to the exterior, substantially as specified.

1,690,049. STEERING GEAR FOR AUTOMOBILES. GEORGE W. BIRD, Great Falls, Mont. Filed Oct. 12, 1926. Serial No. 141,158. 5 Claims. (Cl. 280—90.)

5. A stabilizing mechanism of the class described comprising a shaft supported for rotation, hydraulic means coacting with said shaft for holding the same against rotation upon undue shock, an element freely mounted on said shaft, and means carried by said element for locking it to the shaft for rotation therewith.

1,690,050. SAFETY ATTACHMENT FOR JOURNAL BOXES. EDWARD M. BLAIR, Thomasville, N. C., assignor of one-half to Harrison H. Foust, High Point, N. C. Filed Aug. 8, 1927. Serial No. 211,601. 4 Claims. (Cl. 246—169.)



1. The combination with the journal housing of a railway car, an air-line and a water-line, of a member having a water outlet and an air outlet, one of said outlets opening into the housing, means for maintaining communication between the water outlet and the water-line and between the air outlet and the air-line, and fusible closures for the water outlet and the air outlet respectively.

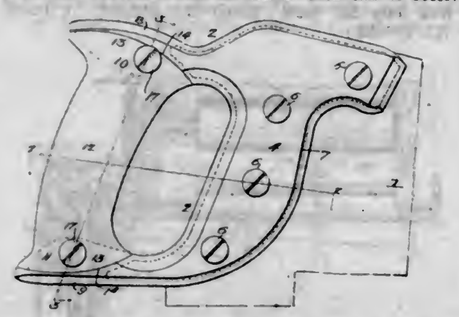
1,690,051. PUNCTUREPROOF COMPOSITION FOR PNEUMATIC TIRES. ERNEST E. BOARD, White Lake, S. Dak. Filed Apr. 11, 1927. Serial No. 183,008. 1 Claim. (Cl. 134—17.5.)

A puncture-proof composition for inner pneumatic tires containing 1 part bran, 1 part of flaxseed meal, 2 parts of corn syrup and 2 parts of an anti-freeze solution containing calcium chloride 27.50% and potassium chromate 1 diluted with water to a pasty condition for introduction to an inner vulcanized pneumatic tire.

1,690,052. ELECTRIC SWITCH. JOHANNES R. CARLSON, Hartford, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Nov. 7, 1922. Serial No. 599,506. 5 Claims. (Cl. 200—172.)

1. A rotary snap switch handle comprising a handle body recessed to receive the threaded end of a switch-operating spindle, and an eccentrically arranged spindle-driving member fast with the spindle, a tapped member slidable but non-rotatable in said handle recess and adapted to make screw connection with the end of the switch spindle, an abutment member secured to the handle, a spring interposed between said abutment and tapped member and stressed by the attaching engagement of the spindle with said tapped member and the incidental displacement of the latter toward the abutment, said eccentrically arranged spindle-driving member entering and engaging a handle element for rotation with the handle in both directions, said engagement being automatically effected in predetermined relative positions of the part by the movement of the handle toward the spindle.

1,690,053. LEVEL. RICHARD C. CHARLTON, Philadelphia, Pa., assignor to Henry Disston & Sons, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1926. Serial No. 148,928. 3 Claims. (Cl. 33—211.)

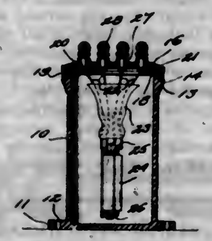


1. The combination in a level, of a frame made of T-shaped bars; a body portion consisting of two plates spaced apart; means for securing the plates to the T-web of the bars, the heads of the T-shaped bars extending laterally beyond the plates, each of said plates having an opening; and a spirit tube located in the space between the plates opposite the openings.

1,690,054. SAW HANDLE. RICHARD C. CHARLTON, Philadelphia, Pa., assignor to Henry Disston & Sons, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 8, 1926. Serial No. 153,338. 2 Claims. (Cl. 145—113.)

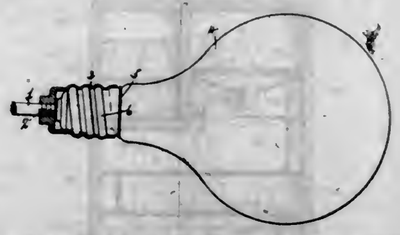
1. The combination in a handle for hand-saws, of a body portion made in two parts secured together and to a saw-blade, each part being made of metal and being hollow;

upper and lower horns projecting rearwardly from the body portion and having tongues; a hand-grip located between the two horns and slotted at each end to receive



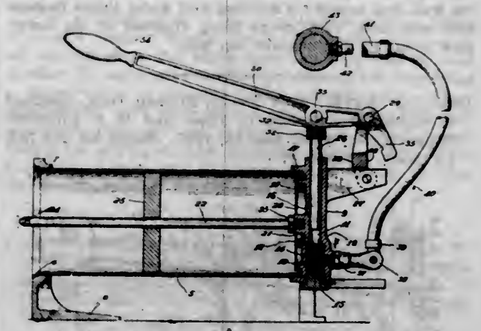
the tongues; and transverse screws extending through each end of the hand-grip and through the two-part tongues, clamping the parts firmly together.

1,690,055. PLOW. MCGINNIS CHURCHILL, Murray, Nebr. Filed Nov. 11, 1927. Serial No. 232,649. 3 Claims. (Cl. 97—59.)



1. An agricultural implement comprising a frame, a wheel carried thereby, said frame comprising a pair of handle bars and a pair of beam carrying members, the beam carrying members being arranged at rightangles to each other with the handle bars between the two members, plow beams reemovably connected with the members, means for detachably connecting plows with the beams, the other ends of the beams being reduced, one beam having a long reduced portion and clamping means associated with the handle bars for engaging the reduced ends of the beams.

1,690,056. RENEWABLE-FILAMENT LAMP. MELVIN VANCE COLEMAN, Cumberland, Md. Filed May 15, 1926. Serial No. 109,367. 1 Claim. (Cl. 250—27.5.)



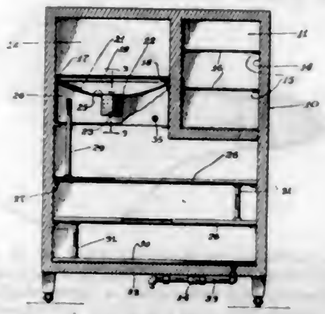
In a renewable filament vacuum tube, a bulb of glass having one end open and formed with a thickened reinforcing portion provided with a seat, a cover of insulating material telescopically engaged with said seat, gasket means between the cover and the seat, a plurality of terminal elements rigidly secured to and carried by the cover, a filament, a grid and a plate electrode located within the bulb and supported by conductors connected with said terminal elements, said cover having a casing provided with an inwardly closing check valve and with means for attachment of a vacuum pump thereto.

1,690,057. FLOAT BALL. PAUL H. COLEMAN, Lynch, Ky. Filed July 12, 1927. Serial No. 205,144. 2 Claims. (Cl. 137—104.)

2. In a device of the character described, in combination, a glass float bulb, said bulb having a partial vacuum created therein, said bulb having a screw shank, and a standard electric bulb socket in which said shank screws, and a threaded float rod to which said socket is threaded.

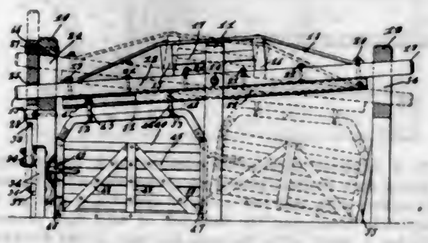
1,690,058. LUBRICANT COMPRESSOR. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 27, 1923. Serial No. 634,970. 12 Claims. (Cl. 221—47.1.)

7. A lubricant compressor comprising a low pressure cylinder open to atmosphere, a high pressure cylinder communicating with said low pressure cylinder, a plunger for completely displacing the contents of said high pressure cylinder, a check valve forming the wall of the discharge end of said high pressure cylinder, said valve being adapted to be opened by contact with said plunger to produce substantially complete displacement of the contents of said cylinder upon each stroke of said plunger.



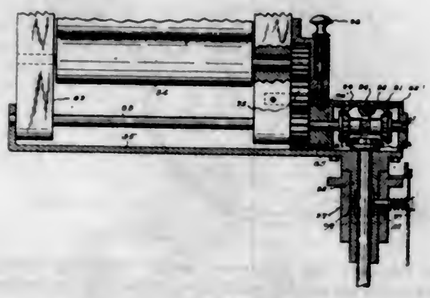
1,690,059. HARD COURT FOR TENNIS AND THE LIKE. GERARD JOHANNES EILERS, Amsterdam, Netherlands. Filed Feb. 9, 1928, Serial No. 253,188, and in the Netherlands Jan. 6, 1927. 1 Claim. (Cl. 94—19.)

A construction for a tennis court or the like comprising a bottom layer of coarse, granulated blast furnace slags having a rough surface and many projecting parts,



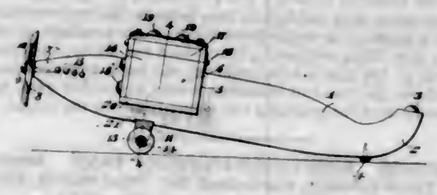
and a top layer interlocking with said bottom layer and including a mixture of finer, sifted, granulated blast furnace slags of the same general character as the bottom layer and a binder of powdered brick dust.

1,690,060. REFRIGERATOR. MISSOURI ELLIS, Chicago, Ill. Filed Jan. 28, 1927. Serial No. 164,293. 1 Claim. (Cl. 62—39.)



In combination with a refrigerator having an ice receiving compartment, a tank in said compartment having a concave top wall, a substantially flat plate mounted over said concave wall and adapted to support ice in said compartment, said plate having a plurality of perforations formed therein through which water from the melting ice may flow into the concave portion of said top wall, and means for filtering said water before passage into said tank, said means being disposed at the lowermost point in said concave top wall.

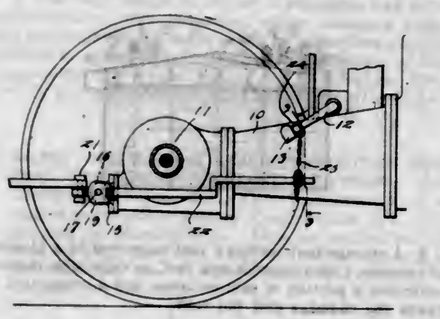
1,690,061. GATE. JACK EVANS, Braman, Okla., assignor of one-half to Nathan L. Jones and B. I. Litowich, Salina, Kans. Filed Aug. 13, 1927. Serial No. 212,799. 1 Claim. (Cl. 39—67.)



In a gate, a gate structure, a pair of central posts arranged in spaced relation with respect to each other, a rockable beam pivoted between said posts, a guide frame for said beam and including standards secured to said beam and rising therefrom, a brace bar arranged between the posts below their upper ends and connected to the standards intermediate the ends thereof, bracing means secured to the standards and top of said beam respectively, a track-way secured to the underside of said beam, rollers having connection with said gate structure and mounted in the track-way for movement in a substantially horizontal plane, side posts having slots therein to accommodate the ends of said beam, a vertical slide slotted for receiving one end of said beam to operate the latter and being mounted for movement on one of said side posts, means connected to the vertical slide to move the same for tilting the beam and means connected to the other side post and being adapted to receive the gate structure to hold the same at an inclination when open.

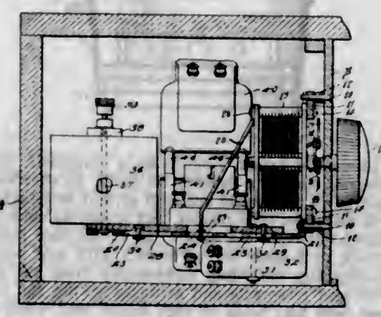
1,690,062. FOLDABLE WRINGER. JOHN J. GROBEN, Philadelphia, Pa. Original application filed July 22, 1922, Serial No. 576,827. Divided and this application filed July 20, 1923. Serial No. 652,802. 1 Claim. (Cl. 68—32.)

A foldable wringer comprising a laterally extending supporting bracket, a gear box on said bracket, a bearing hub integral with and depending at right angles from said bracket, a stationary bearing sleeve, said bearing hub being rotatably adjustable in said bearing sleeve, a drive shaft disposed in said hub, means co-operable between the bearing sleeve and the hub for holding the head in different selected positions and retaining the wringer against rotation about the drive shaft, a bevel gear secured to the upper end of said drive shaft and extending into said gear box, a laterally extending driven shaft rotatably supported in said gear box, a pair of bevel gears on a portion of said driven shaft located in said gear box, means for shifting the gears on the driven shaft, a vertical spring influenced plunger with means to retain said wringer frame in a selected position, and a pinion on said driven shaft between said gear box and wringer frame for maintaining a constant mesh with and driving a set of wringer gears.



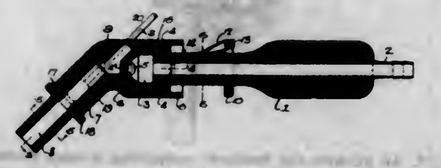
1,690,063. COMBINED CONTAINER AND SUPPORT. CHARLES W. HALL, Valparaiso, Ind. Filed Aug. 2, 1926. Serial No. 126,626. 6 Claims. (Cl. 211—71.)

1. A container support comprising a flat bar disposed on its lower longitudinal edge and formed with a cut-out portion opening at the upper longitudinal edge of the bar and providing a socket forming means for receiving and securing a container to the bar, and a supporting carriage of the wheeled type having its top edge, intermediate its ends, secured against said lower longitudinal edge directly below the base of said socket forming means, the wheels of said carriage disposed laterally with respect to each side face of the bar.



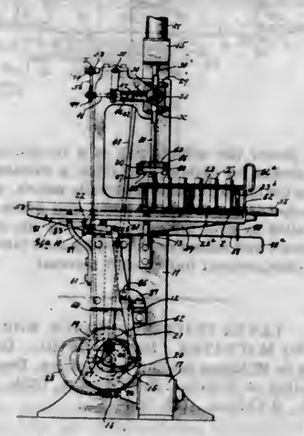
1,690,064. ANTIREARING ATTACHMENT FOR TRACTORS. WILLIAM HAYES, Big Hill, Ky. Filed Dec. 18, 1926. Serial No. 155,738. 2 Claims. (Cl. 180—82.)

1. A tractor hitch comprising a plate adapted to be applied to the housing of the rear axle of the tractor at a point below the axle, said plate having spaced ears, a clevis plate having spaced ears lying against the outer surfaces of the first mentioned ears, a pivot bolt passing through all of the ears and bridging the space between them, an arm fixed to one of the ears of the clevis plate and disposed transversely under the housing and flexible means loosely connecting the free end of said arm with



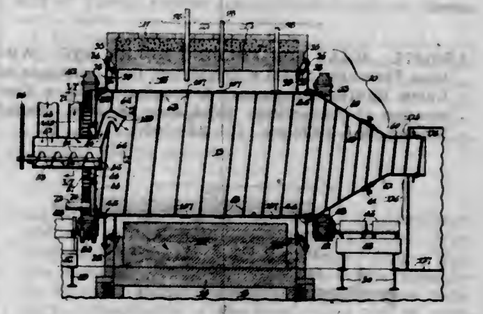
the clutch lever of the tractor and permitting limited angular movement of the clevis plate and tractor without actuation of the clutch lever to thereby compensate for angular displacement during passage of the tractor over rough surfaces.

1,690,065. SUPPORTING FRAME FOR INSTRUMENTS OF RADIO SETS. GUSTAV V. HEDSTROM, Kenosha, Wis. Filed Nov. 14, 1925. Serial No. 69,063. 4 Claims. (Cl. 250—14.)



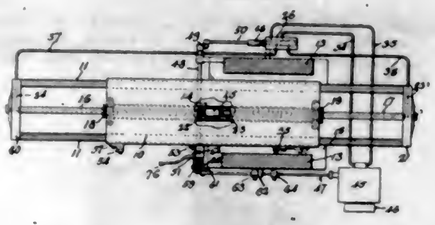
1. Radio apparatus comprising a panel, spaced bars supported on said panel in the rear thereof and relatively close thereto, condenser means connected to said bars, fastening elements securing said bars to the panel, brackets secured to one of said bars by certain of said fastening elements and extending rearwardly of the bars and condenser, and spaced socket-supporting plates on said brackets.

1,690,066. BATTERY-FILLING DEVICE. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 4, 1921. Serial No. 474,895. 3 Claims. (Cl. 226—39.)



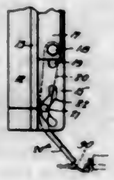
1. The combination in a battery filling device of a tubular handle having a delivery nozzle made of electrolyte-proof insulating material; electrolyte-proof metallic conductors carried by said nozzle and terminating in the same plane at the delivery end thereof; with insulated conductors imbedded in the material of the nozzle and having their metallic portions surrounded by and enclosed within said terminal conductors.

1,690,067. FILLING MACHINE. CHARLES S. WEEKS, South Orange, N. J., assignor to George W. Smythe and Thomas D. Osbourne. Filed Dec. 23, 1921. Serial No. 524,338. 19 Claims. (Cl. 226—95.)



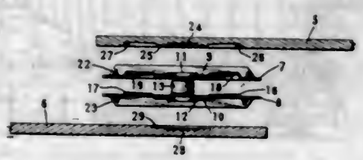
1. In a filling machine, the combination with a filling tube of a member movable relatively thereto, and a cut-off separate from the filling tube and supported by said member for movement therewith, said cut-off embodying a plurality of co-operable parts movable into contact substantially with each other below said filling tube and said filling tube and said co-operable members being positioned for wiping contact with the exterior surfaces of said filling tube on the movement of said member and the cut-off relatively to said filling tube.

1,690,068. PROCESSING APPARATUS. FREDERICK W. ECKFELDT, Norristown, Pa., assignor to John T. Lewis & Bros. Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 3, 1927. Serial No. 223,830. 15 Claims. (Cl. 263—34.)



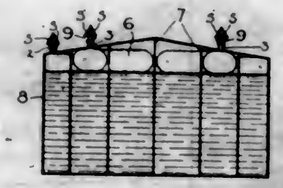
15. A processing apparatus of the character described comprising a rotating horizontal drum, and an internally-attached spiral having convolutions of gradually increasing depth and gradually decreasing pitch for progression of the material being processed longitudinally of the drum.

1,690,069. HYDRAULIC DRIVE FOR MACHINE TOOLS. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 9, 1924. Serial No. 719,003. 13 Claims. (Cl. 60—52.)



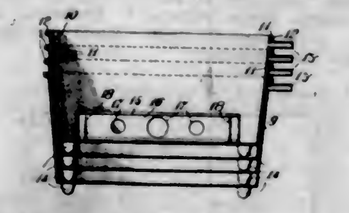
1. In a planer the combination of a reciprocating table, hydraulic means for driving said table, a variable displacement pump for operating said hydraulic means, valve mechanism interposed between said pump and hydraulic means and controlled by said table for reversing the direction of travel thereof, and means controlled by said table for varying pump displacement during said reversal.

1,690,070. LEVER-TRIPPING DEVICE FOR BOTTLE-CAPPING MACHINES. ROLAND E. HILL, Decatur, Ill., assignor to Williams Sealing Corporation, Decatur, Ill., a Corporation of Illinois. Filed Nov. 8, 1924. Serial No. 748,692. 3 Claims. (Cl. 226—81.)



1. The combination with a guide having a slot, of a vertically movable plunger, a finger pivotally connected to the end of the plunger, a pin carried by the finger and working in the slot, said slot being curved to impart a lateral movement to the free end of the finger during its vertical movement.

1,690,071. JOINT FOR FOLDING RULES, ETC. WILLIAM FERDINAND HOERLE, Torrington, Conn., assignor to Union Hardware Company, Torrington, Conn., a Corporation of Connecticut. Filed June 18, 1926. Serial No. 116,848. 5 Claims. (Cl. 33—105.)



2. A joint for a folding rule, etc., comprising sheet metal members having resilient perforated diaphragms offset from the plane of said members with inter-fitting bosses and recesses and a rivet having its ends upset to connect said diaphragms.

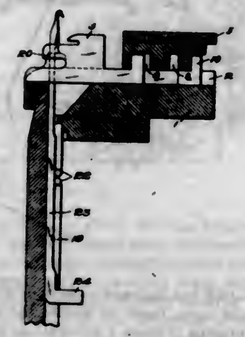
1,690,072. RECEPTACLE FOR VOLATILE LIQUIDS. CLEON R. JOHNSON, Houston, Tex., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Nov. 13, 1924. Serial No. 749,721. 4 Claims. (Cl. 220—85.)

1. A storage tank having a roof supported by a plurality of columns, a vent through said roof, an expansible chamber encircling a portion of said columns, and a connection between the chamber and the vent.

1,690,073. PNEUMATIC TROUGH. JOSEPH H. KINCAID, Evanston, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 21, 1926. Serial No. 130,723. 1 Claim. (Cl. 220—97.)

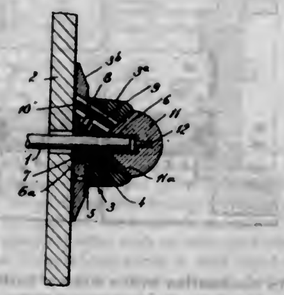
A pneumatic trough comprising a receptacle tapering downwardly and of a substantial depth, an overflow pipe secured in an opening in one wall of said receptacle adjacent to the upper edge thereof, and extending outwardly a substantial distance for conducting excess fluid from said receptacle to a point out of contact with said wall, and supporting legs extending downwardly from the bottom wall of said receptacle and arranged within the contour thereof, said legs being of such length that when a plurality of said receptacles are nested for shipment said pipes each will be supported adjacent to but out of contact with the upper edge of the next adjacent outer receptacle.

1,690,074. ALL-WIRE-PIN FASTENER. GEORGE A. KING, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 11, 1928. Serial No. 269,208. 9 Claims. (Cl. 24—150.)



1. An all-wire pin fastener, comprising a snap fastener member and a pin member having its head formed to pivotally support said snap fastener member and to clasp it in locked position.

1,690,075. PROCESS OF ALKYLATION. CHARLES A. KRAUS and CONRAD C. CALLIS, Worcester, Mass., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Apr. 5, 1923. Serial No. 630,091. 4 Claims. (Cl. 260—11.)



1. The improvement in the art of alkylating lead for the preparation of lead tetraethyl, which comprises subjecting plumbous chlorid to the action of magnesium and ethyl chlorid in ether, without preliminary formation of ethyl magnesium chlorid maintaining the temperature around 40° C., and finally removing the lead tetraethyl by steam.

1,690,076. MECHANISM FOR CONTROLLING KNITTING NEEDLES IN PLATING RELATIONS. JOHN LAWSON and ROBERT H. LAWSON, Pawtucket, R. I., assignors to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Original application filed Mar. 10, 1927, Serial No. 174,176. Divided and this application filed Jan. 3, 1928. Serial No. 244,073. 12 Claims. (Cl. 66—36.)

1. In a knitting machine having primary means for effecting normal and reverse plating, a series of independent needles and operating means therefor, to which needles two threads are adapted to be fed in a plating relation, regular sinkers or web holders for the needles respectively, and means for deflecting selected needles at the thread engaging end, with continued feeding of both threads to the selectively deflected needles, whereby auxiliary means is provided for insuring a change from reverse plating relation to normal plating relation of said threads.

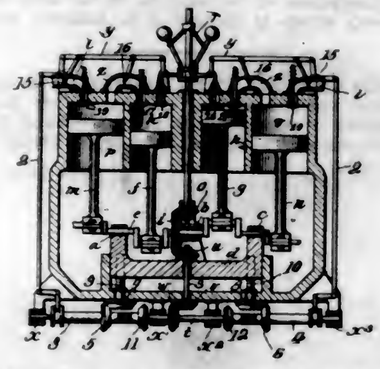
1,690,077. VARIABLE CONTROL DEVICE. LOUIS G. PACENT, Winfield, N. Y., assignor to Pacent Electric Company, Inc., New York, N. Y., a Corporation of New York. Filed June 9, 1923. Serial No. 644,299. 1 Claim. (Cl. 74—7.)

A variable control device comprising an adjusting member engageable with a shaft, a swinging pivot pin pivotally connected with said member at one end, a roller journaled on the free end of said pivot pin and an adjusting knob journaled on said member and engageable with the outer rim of said roller to thereby swing the pivot pin inward to effect engagement of the inner rim of the roller with a stationary surface at the back of the adjusting member.

1,690,078. NUT AND SCREW FASTENING. WALTER H. PIERCE, Cambridge, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed July 22, 1925. Serial No. 45,281. 5 Claims. (Cl. 85—2.4.)

1. A nut and screw fastened installation comprising, in combination, a plurality of parts to be secured together, a nut unit passing into an aperture presented by one of said parts, said nut unit including an initially assembled nut and nut-holder, the nut having a screw-receiving aperture and the nut-holder having a number of resilient fingers bent inwardly to intersect the screw-receiving aperture in the nut and a screw for passage through the aperture in the nut to engage said inbent resilient fingers, thereby to expand and back-support said nut-holding part to prevent contraction thereof and secure said parts together.

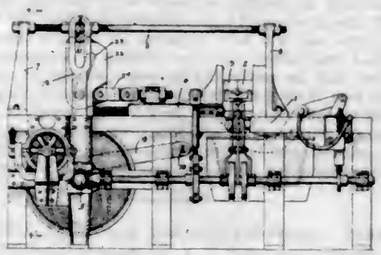
1,690,079. COMPOSITE SHEET MATERIAL. WILLIAM R. SEIGLE, New York, N. Y., assignor to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 5, 1921. Serial No. 505,535. 7 Claims. (Cl. 154—51.)



1. Sheet-roofing comprising a felt in which mineral fibres of the asbestos class predominate in quantity with a minor proportion by weight of stiff hair-like bodies interspersed therethrough, and an asphalt, substantially solid at normal weather-temperatures, occupying the interfibre voids.

4. Laminated sheet material, containing in combination a plurality of felted fibrous sheets comprising mineral fibres of the asbestos class and stiff elastic void-producing hair-like bodies interspersed among the mineral fibres, and a body of asphaltic material impregnating the said felted sheets and forming a continuous matrix from one surface to the other of the material.

1,690,080. SUPERCHARGER INTERNAL-COMBUSTION ENGINE AND METHOD OF SUPERCHARGING. MANFRED SENG, Berlin, Germany, and ANTHONY GEORGE MALDON MICHELL, Melbourne, Victoria, Australia, assignors to Michell-Crackless Engines Corporation, New York, N. Y., a Corporation of New York. Filed July 27, 1927, Serial No. 208,770, and in Germany July 15, 1926. 12 Claims. (Cl. 123—119.)

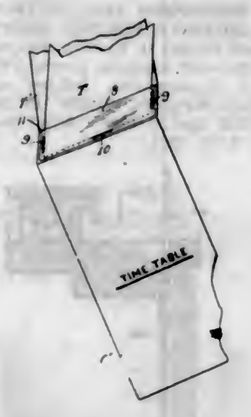


1. In a supercharger internal combustion engine, a power cylinder having a piston, a shaft operatively connected with said piston to be driven thereby, a supercharging pump connected to said shaft to be driven therefrom, means to vary the positions of the power pistons relatively

to the cylinders at the phases of minimum compression volume, means for varying the effective discharge of the said pump so as to maintain at all engine speeds a con-

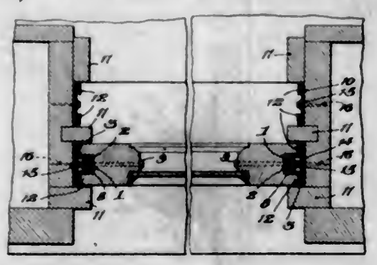
stant upper limit of compression pressure in the power cylinder, and devices for simultaneously accomplishing said variations.

1,690,081. DIE-CASTING MACHINE. CHARLES J. SYKES, Chicago, Ill., assignor to Lewis J. Brainard, Chicago, Ill. Filed Sept. 2, 1927. Serial No. 217,140. 5 Claims. (Cl. 22—92.)



1. In a machine of the character described, a die having a movable member, a reciprocatory device movable transversely with respect to the path of said member, an element connected to said member and having a slot inclined with respect to the path of said reciprocatory member, and an actuator carried by said device and extending into said slot, the slot being so shaped that movement of said element for a given length of travel of said device is very small when the actuator is near one end of the slot as compared with the movement of said element for a corresponding length of travel when the actuator is at other points in the slot.

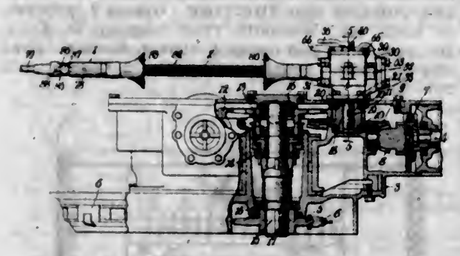
1,690,082. TACK-FASTENED STUD FOR SNAP FASTENERS. FRANK E. WARNER, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 23, 1927. Serial No. 207,961. 4 Claims. (Cl. 24—219.)



1. A snap-fastener member, having a shell and a tack-engaging member arranged within said shell and comprising a base having a hole through which the tack passes and by which it is frictionally engaged, and upstanding end members curved longitudinally and transversely to conform to the shank of the tack and converging to engage the leading end of the tack to prevent tipping.

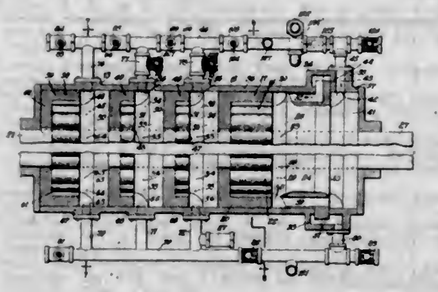
1,690,083. COMBINED TIME-TABLE, TICKET HOLDER, AND ADVERTISING DEVICE. LEON R. WATERMAN, Flushing, N. Y., assignor to The Time Table Advertiser, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 10, 1924. Serial No. 749,080. 2 Claims. (Cl. 129—20.)

1. In a holder for railroad tickets, a folder comprising a sheet folded upon itself to divide the sheet into flaps and having printed thereon a schedule of the running time of trains and having other printed matter thereon to adapt the folder as an advertising medium, and a strip of transparent material attached to the sheet with one edge extending transversely of and contiguous to the fold for the engagement of a ticket between said strip and the folder, and said sheet arranged with a weakened portion to extend transversely and parallel to the fold and spaced from the fold a distance equal to the width of the strip whereby said flap of the folder may be readily bent laterally for the presentation of the ticket for punching to the conductor.



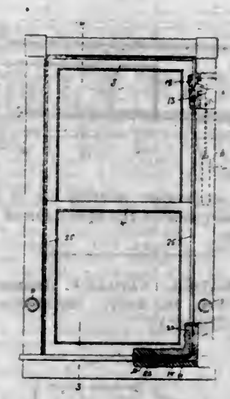
1,690,084. WINDOW CONSTRUCTION. SAM WESTERHEIM, Sioux Falls, S. Dak. Filed Apr. 20, 1928. Serial No. 271,557. 6 Claims. (Cl. 20—69.)

1. In combination with a window having a groove in its side edge and a casing having a window guide, a substantially U-shaped member in said groove having outwardly extending flanges disposed over and spaced from the said side edge of the window, curved plate springs in the U-



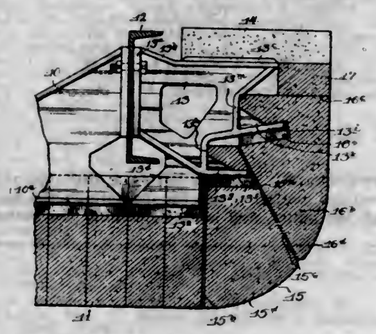
shaped member having its free edges bearing against the bottom of the member, bolts extending through the springs and member and through the window sides so as to be accessible for adjustment, a member having a base engaged with the bottom of the guide and having inturned sides, said flanges of the first member being received between the base and inturned sides of the second member, said second member having a central longitudinal hollow inwardly extending bead, a packing strip in the bead engaged with the bottom of the guide, and fasteners extending through the bead and into the casing.

1,690,085. DRILLING TOOL. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 17, 1926. Serial No. 95,400. 19 Claims. (Cl. 255—47.)



1. In a drilling tool, a power driving element adapted to be driven in opposite directions, cooperating gearing driven thereby, mechanism connecting said gearing with said driving element, said mechanism being automatically operative to prevent driving of said gearing when said driving element is driven in one direction, a transmission shaft, a clutch connecting said shaft with said gearing, a flexible transmission shaft driven by said shaft, and a drilling tool driven by said flexible transmission shaft.

1,690,086. TRANSMISSION. WILLIAM C. MILES, New York, N. Y. Filed July 11, 1923. Serial No. 650,760. 6 Claims. (Cl. 60—53.)

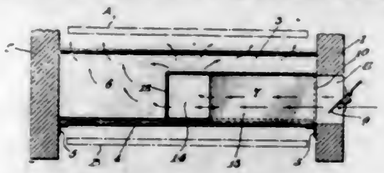


1. In a transmission, a fluid clutch unit having fluid inlet and outlet ports and comprising driving and driven members adapted to become driven and driving members, respectively, a fluid measuring device having a rotatable element connected to one of said clutch members, said measuring device being provided with an inlet port adapted to communicate with one of the ports of said clutch unit, and means operable when said driving element becomes a driven element to sever communication between the inlet port of said measuring device and one of the ports of said clutch unit and place the other port of said clutch unit in communication with the inlet port of said measuring device.

1,690,087. WINDOW SASH. ASBURY C. VOWELL, Little Rock, Ark. Filed Mar. 14, 1927. Serial No. 175,326. 6 Claims. (Cl. 20—43.)

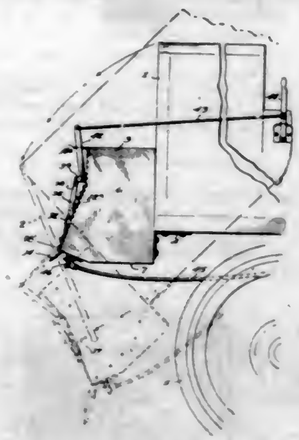
1. A device of the character described, including a window frame and sash hung therein, and single cord for supporting said sash, and weights attached to both ends of said cord.

1,690,088. ARCH-NOSE CONSTRUCTION. SAMUEL F. BURNET, St. Louis, Mo., assignor to Laclede-Christy Clay Products Co., St. Louis, Mo., a Corporation of Missouri. Filed Oct. 17, 1925. Serial No. 63,202. 11 Claims. (Cl. 110—99.)



1. An arch nose supporting member having a lower horizontal tile supporting flange, an intermediate tile supporting flange extending outwardly from said member, and an upper tile supporting flange extending outwardly and upwardly from said member, said upper flange partially overlying and located above and projecting beyond said intermediate flange, said flanges being open at their outer ends and constructed and arranged to permit sliding movement of the tile into position on said flanges.

1,690,089. WIND BOX. JOHN A. CONLY, New York, N. Y., assignor of forty per cent to Joseph A. Rauscher, Hollis, N. Y. Filed Mar. 11, 1925. Serial No. 14,615. 6 Claims. (Cl. 110—40.)

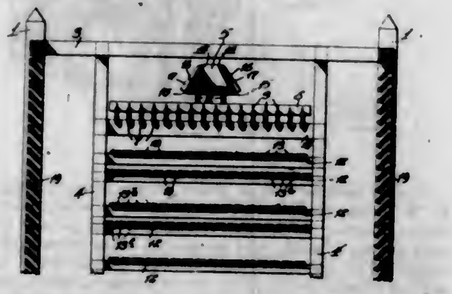


3. In combination with an endless grate or stoker mechanism having an upper and a lower run, a compartment provided between the runs thereof and entirely closed except for its top, a wind box positioned within said compartment on the bottom thereof and secured at one end to a side wall of said compartment and having one end adapted to communicate with a source of air under pres-

sure, said wind box being closed at its other end and also closed at its top, bottom and sides but provided with a plurality of openings at substantially the middle of said

grate or stoker mechanism whereby air is admitted uniformly to the under side of the upper run of said grate or stoker mechanism.

1,690,090. SPREADER. NATHAN V. HENDRICKS, Morenci, Mich. Filed Feb. 16, 1927. Serial No. 168,649. 7 Claims. (Cl. 275—2.)



1. In a spreader, a casing having a discharge outlet, a reciprocating toothed feeder for discharging the material through the outlet, and a door guarding the outlet and vertically adjustable to regulate the size thereof, said door comprising or including a plurality of independently openable sections each normally held closed and adapted to open under a predetermined pressure.

Abrasive article and making the same, Rubber-bonded. D. E. Webster. 1,687,410; Oct. 9.
Acetaldehyde, Manufacturing. H. S. Reid and W. C. Hovey. 1,687,228; Oct. 9.
Acid material, Solid. H. T. Leo. 1,686 703; Oct. 9.
Aerials for wireless signaling. T. L. Eckesley. 1,686,963; Oct. 9.
Aerohelicopter. F. Formánek and E. Zeman. 1,687,198; Oct. 9.
Air cleaner. D. Head. 1,687,090; Oct. 9.
Aircraft. C. S. Hall. 1,687,203; Oct. 9.
Air die. W. S. Pritchard. 1,687,300; Oct. 9.
Air gun. C. F. Lefever. 1,686,702; Oct. 9.
Air gun, Spring. C. F. Lefever. 1 686,752; Oct. 9.
Air heater. J. H. Hume. 1,686,614; Oct. 9.
Airship. J. S. Abreu. 1,687,000; Oct. 9.
Alarm and system involving the same, Pyrotechnic. H. C. Gammeter. 1,687,159; Oct. 9.
Alarm device, Rotary. L. A. Grimes. 1,686,692; Oct. 9.
Alarm for automobiles, Burglar. E. G. Schultz. 1,687,110; Oct. 9.
Alignment indicator, Wheel-. H. A. Buckert and E. K. Hall. 1,686,895; Oct. 9.
Alkaloids, Obtaining. G. W. F. F. Knoth. 1,686,866; Oct. 9.
Alternate-current machine, Compensated. R. Richter and W. Sarfert. 1,687,311; Oct. 9.
Amplifiers, Method of and apparatus for operating electrical. E. H. Loftin. 1,686,755; Oct. 9.
Amplifying. R. A. Heising. 1,687,245; Oct. 9.
Anchor, Rail. C. F. Yardley. 1,686,544; Oct. 9.
Anchors, Manufacturing sheet-metal rail. L. A. Schneider. 1,686,537; Oct. 9.
Applicator and producing it, Emergency. W. R. Dorman, W. V. Suydam, and D. R. Stonelelgh. 1,687,472; Oct. 9.
Applicator, Electric-heat. A. Klotz. 1,686,865; Oct. 9.
Arch for high-temperature uses, Masonry. F. H. Norton. 1,686,761; Oct. 9.
Automobile body, Convertible. O. E. Horner. 1,687,021; Oct. 9.
Automobile creeper. H. A. Buckert and E. K. Hall. 1,686 896; Oct. 9.
Automobile jack. J. A. Marzolf. 1,687,027; Oct. 9.
Automobile lock. F. M. Gillenwaters. 1,687,475; Oct. 9.
Automobile roof. L. Weiss. 1,686,587; Oct. 9.
Automobile signal. A. S. Bowersox. 1,687,053; Oct. 9.
Automobile signal. F. M. Graham. 1,687,291; Oct. 9.
Automobile signal. J. P. Hanson. 1,687,065; Oct. 9.
Automobile signal. S. Kloos. 1,687,450; Oct. 9.
Autosleigh. F. A. Klein. 1,687,455; Oct. 9.
Azodyestuff, Diazotizable. M. Boeniger. 1,686,947; Oct. 9.
Baling press. G. W. Langford. 1,687,219; Oct. 9.
Ballast-removing machine, Railroad-. J. F. Robb. 1,687,313; Oct. 9.
Bandage roller, cutter, and cabinet. J. J. Moore. 1,687,031; Oct. 9.
Banding machine. O. Muller. 1,686,628; Oct. 9.
Barrier device for stopping vehicles. E. D. Sawyer. 1,687,147; Oct. 9.
Base for portable lamps. A. J. Carmichael. 1,686,551; Oct. 9.
Battery: *See*—
Storage battery.
Battery, electric accumulator, and electrolyzing apparatus. R. Oppenheim. 1,687,307; Oct. 9.
Battery heater. C. R. Daellenbach. 1,687,196; Oct. 9.
Battery of the Leclanché type, Electric. G. N. Antonoff. 1,687,051; Oct. 9.
Battery-terminal adaptor. V. V. Vaughn. 1,687,262; Oct. 9.
Bearing. G. B. Cheetham. 1,686,732; Oct. 9.
Bearing and making it. J. Brincil. 1,686,951; Oct. 9.
Bearing, Car-axle. L. W. Melcher. 1,687,221; Oct. 9.
